Rex Spherical Roller Bearings

Easy Bearing Clearance Adjustment

Can be field adjusted to meet application needs.

Replaceable Bearing

Available in single set collar, double set collar, eccentric lock and adapter mounting to suit load and installation requirements.

Shaft Ready

Pre-lubricated with our standard grease for normal operation; other lubricants available for special conditions.

Super-finished Raceways

Super-finished raceways provide a cool running, quiet, high-speed and high-load capacity bearing.

Rugged Housing

Standard material — cast iron. Steel or ductile iron available on request.

Multiple Housing Styles

Providing mounting features to match the operational and structural requirements.

Interchangeable Seals – Seal Types

Type Z Seal Clearance

Denoted with a "Z" prefix in the model number. The standard seal used in the majority of applications.

- No frictional drag — generates no heat
- No speed limitations
- All metal — no temperature limitations

Type K Seal Light Contact

Substitute prefix "K" for "Z" in model number. Molded nitrile rubber lip seals out contaminants.

- Protects against contaminants
- Handles high speeds and vibration
- Less drag and heat generation than heavy contact seals

Type G Triple Lip Seal

Substitute prefix "G" for "Z" in model number. Premium elastomer, heavy contact, triple lip seal.

- Protects against fine particles and moisture
- Three contacting lips provide constant contact even during misalignment
- Metal outboard guard protects inner seal lips from abrasion and damage

Type M Seal Heavy Contact

Substitute prefix "M" for "Z" in model number. Premium elastomer, spring loaded contact lip.

- Protects against liquids and grit
- Spring loaded lip assures constant contact, even during misalignment
- Molded-in garter spring retains seal in housing
- Seals in lubricant on horizontal and vertical shafts
- Available in Viton® material

Auxiliary Cap Seals

- Recommended for severe environments
- Provide supplemental protection for the primary seal
- Seals against liquids and gritty contaminants. Particularly effective against water washdown, taconite, cement, sand or caking build-up
- Provides safety, encloses rotating mounting hardware
- Protects primary seal from physical damage
- May be filled with grease to provide purging action
- Available as open or closed end cap

- Use “CB” Suffix in model number
- Protects from rotating shaft exposure and Foreign material penetration

Integral Self-Alignment

Our bearings represent the continuation of 80 years of bearing technology and experience. This design allows the inner race to misalign freely in any direction up to 4° of total misalignment.

By design, these bearings accept both radial and thrust loads under static, oscillatory, or dynamic conditions. The load is taken on the roller raceways, not the roller ends. This means that when thrust is loaded up to their allowable limit, **the bearings do not exhibit roller end wear.**

Featuring SHURLOK Adapter Mounts – Taking the Mystery Out of Mounting

Auxiliary end caps and four field interchangeable seal options ensure long bearing life through a full range of applications.

Self-aligning spherical roller bearing provides a total of 4° static and dynamic misalignment.

Super-finished raceways provide a cool running, quiet, high-speed and high-load capacity bearing

Roller elements are precision ground and super-finished to provide longer bearing life

Adapter sleeve assembly allows easy installation/removal, plus enables use of commercial grade shafts

Positive Locking System allows minimal vibration during operation, therefore not requiring scheduled inspections for snugness of mountings

Spyglass™ Optical Strain Sensor (OSS) Technology reduces installation errors by changing color when tight

Take-up Assemblies

Shaft Mounting Styles

The following five mounting styles are available in any housing style.

2000 Series Single Set Collar

- Normal duty
- Simplest installation
- Most economical

3000 Series Twist Lock™ Eccentric Locking Collar

- Medium duty
- Additional shaft holding power
- Accommodates undersized shafting
- Economical

5000 Series Double Set Collar

- Heavy duty
- Increased shaft holding power and stability
- Moderate cost

6000 Series SHURLOK Adapter Mount

- Heavy duty
- Spyglass Optical Strain Sensor (OSS) Technology
- Full bore contact for maximum shaft holding power, concentricity and running accuracy
- Accommodates undersized shafting
- Easily removable

9000 Series Adapter Mount

- Extra heavy duty
- Full bore contact for maximum shaft holding power, concentricity and running accuracy
- Accommodates undersized shafting

Nomenclature

Symbol

Description

A Z A - 2 207 F

A Two open auxiliary end caps
 AB One open auxiliary end cap on locknut side, one closed on housing side
 B Two auxiliary end caps (open on housing side, closed on threaded cover side)
 BA One open auxiliary end cap on housing side, one closed on locknut side
 X Designates "SPECIAL UNITS", contact Rexnord Industries

Z Clearance seal
 K Light contact seal
 M Heavy contact seal
 G Triple Lip Seal

A Pillow block, fixed
 AS Pillow block, floating
 AF Pillow block, fixed SAF interchange
 AFS Pillow block, floating SAF interchange
 LF Split pillow block, fixed SAF interchange
 LFS Split pillow block, floating SAF interchange
 P Pillow block, fixed
 PS Pillow block, floating
 EP Pillow block, fixed Type E interchange
 EPS Pillow block, floating Type E interchange
 B Flanged block, fixed 4-bolt
 BS Flanged block, floating 4-bolt
 EF Flanged block, fixed 4-bolt Type E interchange
 F Flanged block, fixed 4 or 6-bolt
 FS Flanged block, floating 4 or 6-bolt
 BR Flanged cartridge block, fixed 4-bolt round
 CS Cartridge block, steel housing
 MC Cartridge block, cast iron housing
 D Duplex unit
 N Take-up block for protected screw frame
 T Take-up block for center pull frame
 AT Center pull take-up assembly
 NT Protected screw take-up assembly
 HT Center pull take-up assembly
 FT Elevator boot end take-up assembly
 GT Elevator head end take-up assembly
 ST Center pull spring loaded take-up assembly

11 Size code – only for take-up blocks and assemblies

2 2000 Series, single set collar
 3 3000 Series, eccentric locking collar
 5 5000 Series, double set collar
 6 6000 Series, SHURLOK tapered adapter sleeve
 9 9000 Series, tapered adapter sleeve

207 2 7/16" – last two digits in 16th of an inch
 100MM 100 millimeters

24 Inches of take-up adjustment – only for take-up assemblies
 A One open auxiliary end cap (threaded cover side)
 B One closed auxiliary end cap (threaded cover side)
 C Closed end cap housing side
 CB Closed end cap collar side
 F 4-bolt housing (pillow blocks only)
 G Face locked threaded cover
 H Reverse assembly
 PL Precision bore diameter and bore roundness
 R Tight fit of outer races in housing (high vibration, shock loading)
 S Machined pilot on face of flanged units
 V Viton seal material (when M seal suffix is used)
 Y Redesigned shaft size – not interchangeable
 04 C5 internal clearance (high temperature)
 05 C4 internal clearance (high speed)
 06 C0 internal clearance
 07 C2 internal clearance
 40 Preservative only, no lubrication in unit
 42 Grease designation for Chevron SRI #2
 43 Grease designation for Mobilith SHC460
 63 Grease designation for Mobilith SHC100
 66 Housing drilled both sides for aux caps
 72 Steel housing
 78 Steel retainers
 82 Inner race with Rexlon lined bore - Teflon™ material

Alkaline Fumes and Liquids	1	1	1	4	1	X

To extend life in tough applications, our application experience indicates that special consideration should be given to the addition of Auxiliary Cap Seals in the areas shaded with and “X” on the chart.

Rating Code

- 4 - Excellent - Best seal for conditions listed.
- 3 - Good - Sealability is above average.
- 2 - Fair - Seal performs under intermittent conditions.
- 1 - Limited - Actual conditions must be known to evaluate sealability. Contact Rexnord for special assistance in the realm of materials and designs.
- 0 - Not acceptable - Will not effectively perform seal functions. Contact Rexnord for special assistance in the realm of materials and designs.

Seal Selection Guide

The choice of the seal for a mounted bearing is often the key to successful bearing operation and long service life. The SEAL SELECTION GUIDE incorporates years of Rexnord’s experience against the wide variety of conditions encountered on actual applications. Following the simple selection procedure outlined can translate the benefits of that broad experience to the individual applications through the choice of the most effective seal.

How to Use the Selection Guide

- The appropriate seal for a given application may be selected by comparing the job application conditions against those listed in the Seal Rating Guide on this page.
- When more than one application condition is present, the most appropriate seal may be selected based on prime sealing for the most detrimental condition, and secondary consideration given to the other application conditions.
- Addition of auxiliary caps will enhance the primary seal performance shown in the chart.

Considerations in Addition to Seal Selection

Under certain adverse conditions, other changes should be considered to achieve maximum bearing life:

- High temperature lubricants where housing or ambient temperatures exceed +200°F,
- Special greases for additional bearing protection where excessive water, solvents or chemicals are present.
- EP (extreme pressure) greases where high load, high shock load, or continuous vibration is present.
- Readjustment of internal operating clearance of bearing where extreme high or low temperature conditions exist.

Refer to Seal Rating Guide shown above for speeds in excess of those listed in this table.

*Actual bearing speed limits are largely based upon the applied load and can be found on the Load Rating Table.

Selection Guide

To select a bearing, determine the applied radial load, the applied thrust load, the desired Rating Life, and applicable operating conditions. The procedure shown here will aid in selecting a bearing to meet an L_{10} design life. The formulas for calculating life expectancy should be used to determine the Rating Life L_{10} for the bearing selected.

The selection procedures and rating formulas shown here are in agreement with The American Bearing Manufacturers Association Standards and ANSI/ABMA STD 9-1990. Ratings are based on fatigue life. The Rating Life L_{10} or fatigue life at 90% reliability is the usual basis for bearing selection.

To assure a satisfactory bearing application, fitting practice, mounting, lubrication, sealing, static rating, housing strength, operating conditions and maintenance must be considered.

Steps for Selection

Step 1

Determine an appropriate L_{10} design life.

Type of service	Operating time, hours per year	Design life, years	L_{10} design life, hours
Light seasonal usage	500 to 750	3-5	3,000
Heavy seasonal usage	1,400 to 1,600	4-6	8,000
Industrial—8 hour shift	2,000	10	20,000
Industrial—16 hour shift	4,000	10	40,000
Industrial—continuous	8,700	10	80,000 to 100,000

Step 2

Determine a required $\left(\frac{C}{P}\right)$ from Table 1.

Step 3

Calculate the required C and select a roller bearing.

a For radial load only:

$$P = F_r$$

$$\text{required } C = \left(\frac{C}{P}\right) P \text{ using } \left(\frac{C}{P}\right) \text{ from Step 2}$$

Select a roller bearing from Table 2 with a basic load rating C equal to or greater than the required C.

Step 3 (continued)

b For combined radial and thrust loads:

Select a trial roller bearing of the desired shaft size from Table 2.

Calculate the ratio of thrust load F_a to the radial load F_r .

$$\frac{F_a}{F_r}$$

Calculate the equivalent radial load P

$$P = X F_r + Y F_a$$

If $\frac{F_a}{F_r}$ is equal to or less than e, then $P = X1 F_r + Y1 F_a$

If $\frac{F_a}{F_r}$ is greater than e, then $P = X2 F_r + Y2 F_a$

For values of e, X1, Y1, X2, and Y2, see Table 2.

Calculate the required C

$$\text{required } C = \left(\frac{C}{P}\right) P \text{ using } \left(\frac{C}{P}\right) \text{ from Step 2.}$$

Consult Table 2, basic load rating. If a smaller bearing meets, or nearly meets, the required C, its life expectancy can be calculated.

Note: If the load P is greater than .25C, consult Rexnord Bearing Division.

Selection

Symbols for formulas:

C = basic load rating, pounds (or newtons)

Co = static load rating, pounds (or newtons)

e = a reference value

Fa = thrust load, pounds (or newtons)

Fr = radial load, pounds (or newtons)

L10 = rating life, hours

n = speed, revolutions per minute

P = equivalent radial load, pounds (or newtons)

X = radial factor

Y = thrust factor

Table 1 • Relation of L10 life and speed to $\left(\frac{C}{P}\right)$

Bearing Life Hours L10	Speed, n

200000	16.20	16.70	17.70	18.90	20.00	21.80	23.30	24.60	28.70	

Basic Formula

$$\left(\frac{C}{P}\right) = \left(\frac{L_{10} \times n \times 60}{1,000,000}\right)^{3/10}$$

$$L_{10} = \frac{\left(\frac{C}{P}\right)^{10/3} \times 1,000,000}{n \times 60}$$

Life Expectancy

To calculate the Rating Life L10 of any selected or trial bearing:

Step 1

Determine the equivalent radial load P.

a For radial load only:

$$P = Fr$$

b For combined radial and thrust load:

$$P = XFr + YFa$$

if $\frac{Fa}{Fr}$ is equal to or less than e, then

$$P = X1Fr + Y1Fa$$

if $\frac{Fa}{Fr}$ is greater than e, then

$$P = X2Fr + Y2Fa$$

For values of e, X1, Y1, X2, and Y2, consult the appropriate bearing rating Table 2.

Step 2

Calculate the ratio of the basic load rating C to the equivalent radial load.

$$\left(\frac{C}{P}\right)$$

Step 3

Approximate the bearing life from Table 1.

Life Adjustment

The Rating Life, L10, may be modified for some applications in accordance with the formula

$$Ln = a1a2a3L10$$

where Ln = Adjusted life for (100-n) % reliability,

a1 = Life adjustment factor for reliability

a2 = Life adjustment factor

for material and processing

a3 = Life adjustment factor for operating conditions.

For most normal applications, all factors will be taken as 1, and the Rating Life used as the selection basis or life estimate. In addition, as long as standard catalog bearings are used, a2 will be normally set equal to one.

The factor a3 covers such things as lubrication, misalignment, and temperature. Some conditions that could yield a3 significantly different than unity include speeds less than 20000 DN or greater than 200000 DN, temperatures below -40°F (-40°C) or above 275°F (135°C). For other possible conditions, as well as additional information on life adjustment factors, consult Rexnord Bearing Division.

Table 2 • Load Ratings and Speed Limits

*Values in table represent the 9000 and 6000 series bearings. When commercial grade shafting and clearance mounting are used, the table values should be reduced up to 5% for the 5000 series, 10% reduction for 3000 and reduced up to 15% for the 2000 series.

Adjustment Table

*Load exceeds 25% of the C rating, consult Rexnord Bearing Division.

Shaded areas may require additional axial clearance and/or high speed temperature lubricant due to higher operating temperatures.

Auxiliary Cap Seals for 2000, 3000, 5000, 9000 Series

LN	for locknut side	-----		-----	-----	-----	-----
*	leave blank for non-locknut side						
14-16	bearing size code from dimension page	-----		-----	-----	-----	-----
6	type "A" open caps						
6000	type "B" closed caps	-----		-----	-----	-----	-----
507	5-7/16" last two digits in 16th of an inch						
*	not required for closed style caps	-----		-----	-----	-----	-----
	LN kits provided with extended cap to provide clearance over adapter assembly.						

"A" Prefix
(2 Open Caps)
Example: AZAF6515F

"BA" Prefix
(1 Closed Cap Locknut Slide 1 Open Cap Housing slide)
Example: BAZAF6515F

"AB" Prefix
(1 Open Cap Locknut Slide 1 Closed Cap Housing slide)
Example: ABZAF6515F

"B66" Suffix
(1 Closed Cap Locknut Side "Opposite Locknut")
Example: ZAF6515FB66

"B" Suffix
(1 Closed Cap Locknut Side)
Example: ZAF6515FB

"J" and "K" Installed Dimensions

"A66" Suffix
(1 Open Cap Housing side "Opposite Locknut")
Example: ZAF6515FA66

"A" Suffix
(1 Open Cap Locknut Side)
Example: ZAF6515FA

‡ Housings are not drilled to accept auxiliary caps as standard.

*** Indicates shaft size in inches, i.e. the open cap for a ZA2107 would be A4107

◊ See specific product page for applicability.

ZAF5000, ZAFS5000

Interchange: TAF, USRB5500, (E)RPBXT

Photo Shows a 2-Bolt Spherical Roller Bearing Pillow Block Unit

Product Features

- SAF Interchange
- Precision milled ends
- Corrosion-resistant powder coating
- Cast iron housing
- Misalignment capabilities - total of 4°
- Broad range of sealing options
- Factory set clearance & lubrication
- Precision ground & superfinished raceways
- See Features and Benefits for additional info on pages 10 - 13.

Additional Notes

- Please call 1-866-REXNORD for availability
- Metric bore sizes available, see the Rex Interchangeability guide
- Lubrication fitting tap size: for size code 6 thru 11, 1/8" PT; for all other size codes, 1/4" PT
- Base to centerline tolerance, +/- .005 in (+/- 0.13 mm)
- Bore size = nominal shaft size +.001 in/- .000 in (+0.03 mm/-0.00 mm)
- Expansion - size code 6-8 is 3/8", size code 9 thru 11 is 1/2" & size code 12 thru 16 is 3/4"
- Seals - To specify G, K or M seal, replace "Z" in part number with "G", "K" or "M"

- "K" seals only available in size codes 6 thru 11
- "G" seals available in size codes 3 thru 13
- Auxiliary end caps - available in all sizes
- Pad length tolerance, +/- .0075 in (+/- 0.19 mm) for size codes 6 thru 13, +/- .015 in (+/- 0.38 mm) for size codes 14 thru 16
- For the Selection Guide, Load Ratings and Speed Limits, see the Spherical Roller Bearings Engineering section on pages 15 - 27.
- Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

Interchange: ISAF, USRB5500A, QVVPA, QVVPH, TAPA, TAPH

Photo Shows a 2-Bolt Spherical Roller Bearing Pillow Block Unit

Product Features

- Spyglass Optical Strain Sensor (OSS) Technology
- Positive locking system
- Tapered adapter sleeve
- SAF Interchange
- Precision milled ends
- Corrosion-resistant powder coating
- Cast iron housing
- Misalignment capabilities - total of 4°
- Broad range of sealing options
- See Features and Benefits for additional info on pages 10 - 13.

Additional Notes

- Please call 1-866-REXNORD for availability
- Metric bore sizes available, see the Rex Interchangeability guide
- Lubrication fitting tap size: for size code 6 thru 11, 1/8" PT; for all other size codes, 1/4" PT
- Base to centerline tolerance, +/- .005 in (+/- 0.13 mm)
- Expansion - size code 6-8 is 3/8", size code 9 thru 11 is 1/2" & size code 12 thru 16 is 3/4"
- Seals - To specify G, K or M seal, replace "Z" in part number with "G", "K" or "M"

- "G" seals available in size code 13
- Auxiliary end caps - available in all sizes
- Pad length tolerance, +/- .0075 in (+/- 0.19 mm) for size codes 6 thru 13, +/- .015 in (+/- 0.38 mm) for size codes 14 thru 16
- For the Selection Guide, Load Ratings and Speed Limits, see the Spherical Roller Bearings Engineering section on pages 15 - 27.
- Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

ZLF6000

Interchange: ISAF, USRB5500A, QVVPH

Product Features

- Spyglass Optical Strain Sensor (OSS) Technology
- Positive locking system
- Tapered adapter sleeve
- SAF Interchange
- Precision milled ends
- Corrosion-resistant powder coating
- Cast iron split housing
- Pre-Drilled/Tapped for Auxiliary Caps
- Unitized cartridge bearing
- Misalignment capabilities - total of 4°
- Broad range of sealing options
- See Features and Benefits for additional info on pages 10 - 13.

Additional Notes

- Please call 1-866-REXNORD for availability
- Metric bore sizes available, see the Rex Interchangeability guide
- Lubrication fitting tap size: 1/8" PT
- Base to centerline tolerance, +/- .005 in (+/- 0.13 mm)
- Bore size = nominal shaft size + .001 in / -.000 in (+0.03 mm / -0.00 mm)
- Expansion - is 3/8" for all size codes
- Seals - To specify G, K or M seal, replace "Z" in part number with "G", "K" or "M"

- "G" seals available in size codes 3 thru 11
- Auxiliary end caps - available in all size codes except for size codes 2 & 3 and ZAS series
- For the Selection Guide, Load Ratings and Speed Limits, see the Spherical Roller Bearings Engineering section on pages 15 - 27.
- Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

ZA3000, ZAS3000

Interchange: QMPL, QMPF

Photo Shows a 2-Bolt Spherical Roller Bearing Pillow Block Unit

Product Features

- Corrosion-resistant powder coating
- Cast iron housing
- Misalignment capabilities - total of 4°
- Broad range of sealing options
- Factory set clearance & lubrication
- Precision ground & superfinished raceways
- Eccentric locking collar
- Field interchangeable seals
- Fixed or Expansion - total of 3/8" expansion
- See Features and Benefits for additional info on pages 10 - 13.

Additional Notes

- Please call 1-866-REXNORD for availability
- Metric bore sizes available, see the Rex Interchangeability guide
- Lubrication fitting tap size 1/8" PT
- Base to centerline tolerance, +/- .005 in (+/- 0.13 mm)
- Bore size = nominal shaft size +.001 in/-.000 in (+0.03 mm/-0.00 mm)
- Expansion - is 3/8" for all size codes
- Seals - To specify G, K or M seal, replace "Z" in part number with "G", "K" or "M"

Auxiliary end caps - available in all size codes except ZAS series
 For the Selection Guide, Load Ratings and Speed Limits, see the Spherical Roller Bearings Engineering section on pages 15 - 27.

Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

ZA6000, ZAS6000

Interchange: P2BIP, P4BIP, (F)SYR-N, USRB5000A, USRBF5000A, QVVPL, QVVPF, DVVPF

Photo Shows a 2-Bolt Spherical Roller Bearing Pillow Block Unit

Product Features

- Spyglass Optical Strain Sensor (OSS) Technology
- Positive locking system
- Tapered adapter sleeve
- Corrosion-resistant powder coating
- Cast iron housing
- Misalignment capabilities - total of 4°
- Broad range of sealing options
- Factory set clearance & lubrication
- Precision ground & superfinished raceways
- See Features and Benefits for additional info on pages 10 - 13.

Additional Notes

- Please call 1-866-REXNORD for availability
- Metric bore sizes available, see the Rex Interchangeability guide
- Lubrication fitting tap size: for fixed units 1/8" PT
- Base to centerline tolerance, +/- .005 in (+/- 0.13 mm)
- Expansion - is 3/8" for all size codes
- Seals - To specify G, K or M seal, replace "Z" in part number with "G", "K" or "M"
- Auxiliary end caps - available in all size codes except ZAS series

For the Selection Guide, Load Ratings and Speed Limits, see the Spherical Roller Bearings Engineering section on pages 15 - 27.

Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

Photo Shows a 2-Bolt Spherical Roller Bearing Pillow Block Unit

Product Features

- Corrosion-resistant powder coating
- Cast iron housing
- Misalignment capabilities - total of 4°
- Broad range of sealing options
- Factory set clearance & lubrication
- Precision ground & superfinished raceways
- Enhanced life mounting style
- Field interchangeable seals
- Fixed or Expansion - total of 3/8" expansion
- See Features and Benefits for additional info on pages 10 - 13.

Additional Notes

- Please call 1-866-REXNORD for availability
- Metric bore sizes available, see the Rex Interchangeability guide
- Lubrication fitting tap size 1/8" PT
- Base to centerline tolerance, +/- .005 in (+/- 0.13 mm)
- Bore size = nominal shaft size +.001 in/-.000 in (+0.03 mm/-0.00 mm)
- Expansion - is 3/8" for all size codes

- Seals - To specify G, K or M seal, replace "Z" in part number with "G", "K" or "M"
- Auxiliary end caps - available in all size codes except ZAS series
- For the Selection Guide, Load Ratings and Speed Limits, see the Spherical Roller Bearings Engineering section on pages 15 - 27.
- Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

Photo Shows a 2-Bolt Spherical Roller Bearing Pillow Block Unit

Product Features

- Corrosion-resistant powder coating
- Cast steel housing
- Misalignment capabilities - total of 4°
- Broad range of sealing options
- Factory set clearance & lubrication
- Precision ground & superfinished raceways
- Eccentric locking collar
- Field interchangeable seals
- Fixed or Expansion - total of 3/8" expansion
- See Features and Benefits for additional info on pages 10 - 13.

Additional Notes

- Please call 1-866-REXNORD for availability
- Metric bore sizes available, see the Rex Interchangeability guide
- Lubrication fitting tap size 1/8" PT
- Base to centerline tolerance, +/- .005 in (+/-0.13 mm)
- Expansion - is 3/8" for all size codes
- Seals - To specify G, K or M seal, replace "Z" in part number with "G", "K" or "M"
- Auxiliary end caps - available in all size codes except ZAS series

For the Selection Guide, Load Ratings and Speed Limits, see the Spherical Roller Bearings Engineering section on pages 15 - 27.

Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

ZA9000-72, ZAS9000-72

Photo Shows a 2-Bolt Spherical Roller Bearing Pillow Block Unit

Product Features

- Corrosion-resistant powder coating
- Cast steel housing
- Misalignment capabilities - total of 4°
- Broad range of sealing options
- Factory set clearance & lubrication
- Precision ground & superfinished raceways
- Enhanced life mounting style
- Field interchangeable seals
- Fixed or Expansion - total of 3/8" expansion
- See Features and Benefits for additional info on pages 10 - 13.

Additional Notes

- Please call 1-866-REXNORD for availability
- Metric bore sizes available, see the Rex Interchangeability guide
- Lubrication fitting tap size: for size code 4 thru 11, 1/8" PT; for all other size codes, 1/4" PT
- Base to centerline tolerance, +/- .005 in (+/- 0.13 mm)
- Bore size = nominal shaft size +.001 in/- .000 in (+0.03 mm/-0.00 mm)
- Expansion - size code 4 thru 8 is 3/8", size code 9 thru 11 is 1/2" & size code 12 thru 16 is 3/4"

- Seals - To specify G, K or M seal, replace "Z" in part number with "G", "K" or "M"
- "K" seals only available in size codes 4 thru 11
- "G" seals available in size codes 3 thru 13
- Auxiliary end caps - available in all sizes
- For the Selection Guide, Load Ratings and Speed Limits, see the Spherical Roller Bearings Engineering section on pages 15 - 27.
- Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

ZP6000, ZPS6000
Interchange: QVVPXT, QVVPX

Photo Shows a 2-Bolt Spherical Roller Bearing Pillow Block Unit

Product Features

- Spyglass Optical Strain Sensor (OSS) Technology
- Positive locking system
- Tapered adapter sleeve
- Corrosion-resistant powder coating
- Cast iron housing
- Misalignment capabilities - total of 4°
- Broad range of sealing options
- Factory set clearance & lubrication
- Precision ground & superfinished raceways
- See Features and Benefits for additional info on pages 10 - 13.

Additional Notes

- Please call 1-866-REXNORD for availability
- Metric bore sizes available, see the Rex Interchangeability guide
- Lubrication fitting tap size: for size code 6 thru 11, 1/8" PT; for all other size codes, 1/4" PT
- Base to centerline tolerance, +/- .005 in (+/- 0.13 mm)
- Expansion - size code 6 thru 8 is 3/8", size code 9 thru 11 is 1/2" & size code 12 thru 13 is 3/4"
- Seals - To specify G, K or M seal, replace "Z" in part number with "G", "K" or "M"

- "K" seals only available in size codes 3 thru 11
- "G" seals available in size codes 3 thru 13
- Auxiliary end caps - available in all sizes
- For the Selection Guide, Load Ratings and Speed Limits, see the Spherical Roller Bearings Engineering section on pages 15 - 27.
- Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

ZP9000, ZPS9000

Interchange: QVVPKT, QVVPK, TAPKT, TAPK

Photo Shows a 2-Bolt Spherical Roller Bearing Pillow Block Unit

Product Features

- Corrosion-resistant powder coating
- Cast iron housing
- Misalignment capabilities - total of 4°
- Broad range of sealing options
- Factory set clearance & lubrication
- Precision ground & superfinished raceways
- Enhanced life mounting style
- Field interchangeable seals
- Fixed or Expansion - Up to 3/4" expansion
- See Features and Benefits for additional info on pages 10 - 13.

Additional Notes

- Please call 1-866-REXNORD for availability
- Lubrication fitting tap size: for size code 7 thru 11, 1/8" PT; for all other size codes, 1/4" PT
- Base to centerline tolerance, +/- .005 in (+/- 0.13 mm)
- Expansion - size code 7 thru 8 is 3/8", size code 9 thru 11 is 1/2" & size code 12 thru 16 is 3/4"
- Seals - To specify G, K or M seal, replace "Z" in part number with "G", "K" or "M"

"K" seals only available in size codes 7 thru 11

"G" seals available in size codes 3 thru 13

Auxiliary end caps - available in all sizes

For the Selection Guide, Load Ratings and Speed Limits, see the Spherical Roller Bearings Engineering section on pages 15 - 27.

Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

ZEP2000, ZEPS2000

Interchange: EP2BS2, P2BE, EP4BS2, P4BE, (F)SYE, USRBE5000, (E)RPBA, QAP, QAPR, EP2BTRB, EP4BTRB

Photo Shows a 2-Bolt Spherical Roller Bearing Pillow Block Unit

Product Features

- Corrosion-resistant powder coating
- Cast iron housing
- Misalignment capabilities - total of 4°
- Broad range of sealing options
- Factory set clearance & lubrication
- Precision ground & superfinished raceways
- Hardened spring locking collar
- Field interchangeable seats
- See Features and Benefits for additional info on pages 10 - 13.

Additional Notes

- Please call 1-866-REXNORD for availability
- Lubrication fitting tap size, 1/8" PT
- Base to centerline tolerance, +/- .005 in (+/- 0.13 mm)
- Bore size = nominal shaft size +.001 in/- .000 in (+0.03 mm/-0.00 mm)
- Seals - To specify G, K or M seal, replace "Z" in part number with "G", "K" or "M"
- Auxiliary end caps - available in all size codes, except expansion units
- For the Selection Guide, Load Ratings and Speed Limits, see the Spherical Roller Bearings Engineering section on pages 15 - 27.

Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

ZEP5000, ZEPS5000

Interchange: (E)RPB, QAAP(F), QAAPR

Photo Shows a 2-Bolt Spherical Roller Bearing Pillow Block Unit

Product Features

- Corrosion-resistant powder coating
- Cast iron housing
- Misalignment capabilities - total of 4°
- Broad range of sealing options
- Factory set clearance & lubrication
- Precision ground & superfinished raceways
- Two hardened spring locking collars
- Field interchangeable seals
- See Features and Benefits for additional info on pages 10 - 13.

Additional Notes

- Please call 1-866-REXNORD for availability
- Metric bore sizes available, see the Rex Interchangeability guide
- Lubrication fitting tap size: for size code 4 thru 11, 1/8" PT; for all other size codes, 1/4" PT
- Base to centerline tolerance, +/- .005 in (+/- 0.13 mm)
- Bore size = nominal shaft size +.001 in/- .000 in (+0.03 mm/-0.00 mm)
- Seals - To specify G, K or M seal, replace "Z" in part number with "G", "K" or "M"

- "K" seals only available in size codes 4 thru 11
- Auxiliary end caps - available in all size codes, expect expansion units
- For the Selection Guide, Load Ratings and Speed Limits, see the Spherical Roller Bearings Engineering section on pages 15 - 27.
- Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

Interchange: EP2BIP, EP4BIP, (F)SYE-N, USRBE5000A, QVVP, QVVPR, DVP

Photo Shows a 2-Bolt Spherical Roller Bearing Pillow Block Unit

Product Features

- Spyglass Optical Strain Sensor (OSS) Technology
- Positive locking system
- Tapered adapter sleeve
- Corrosion-resistant powder coating
- Cast iron housing
- Misalignment capabilities - total of 4°
- Broad range of sealing options
- Factory set clearance & lubrication
- Precision ground & superfinished raceways
- See Features and Benefits for additional info on pages 10 - 13.

Additional Notes

- Please call 1-866-REXNORD for availability
- Metric bore sizes available, see the Rex Interchangeability guide
- Lubrication fitting tap size: for size code 6 thru 11, 1/8" PT; for all other size codes, 1/4" PT
- Base to centerline tolerance, +/- .005 in (+/- 0.13 mm)
- Seals - To specify G, K or M seal, replace "Z" in part number with "G", "K" or "M"

- "K" seals only available in size codes 4 thru 11
- Auxiliary end caps - available in all size codes, except expansion units
- For the Selection Guide, Load Ratings and Speed Limits, see the Spherical Roller Bearings Engineering section on pages 15 - 27.
- Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

ZEP9000, ZE9000

Photo Shows a 2-Bolt Spherical Roller Bearing Pillow Block Unit

Product Features

- Corrosion-resistant powder coating
- Cast iron housing
- Misalignment capabilities - total of 4°
- Broad range of sealing options
- Factory set clearance & lubrication
- Precision ground & superfinished raceways
- Enhanced life mounting style
- Field interchangeable seals
- See Features and Benefits for additional info on pages 10 - 13.

Additional Notes

- Please call 1-866-REXNORD for availability
- Metric bore sizes available, see Rex Interchangeability guide
- Lubrication fitting tap size, 1/8" PT
- Bore size = nominal shaft size +.001 in/-.000 in (+0.03 mm/-0.00 mm)
- Machined pilot available, add suffix S
- Seals - To specify G, K or M seal, replace "Z" in part number with "G", "K" or "M"
- Auxiliary end caps - available in all size codes except for size codes 2 thru 6 and expansion units
- "G" seals available in size codes 3 thru 11

- Also not available on size code 7 on flange side of non-piloted bearings and size code 7 thru 9 on flange side of piloted bearings
- Pilot Diameter tolerance, +.000 in/-.003 in (+0.00 mm/-0.08 mm)
- For the Selection Guide, Load Ratings and Speed Limits, see the Spherical Roller Bearings Engineering section on pages 15 - 27.
- Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

ZB3000, ZBS3000
Interchange: QMFY, QMFL

Additional Notes

- Please call 1-866-REXNORD for availability
- Lubrication fitting tap size, 1/8" PT
- Bore size = nominal shaft size +.001 in/-.000 in (**+0.03 mm/-0.00 mm**)
- Machined pilot available, add suffix S
- Seals - To specify G, K or M seal, replace "Z" in part number with "G", "K" or "M"
- Auxiliary end caps - available in all size codes except for size codes 4 thru 6 and expansion units

- Also not available on size code 7 on flange side of non-piloted bearings and size code 7 thru 9 on flange side of piloted bearings
- Pilot Diameter tolerance, +.000 in/-.003 in (**+0.00 mm/-0.08 mm**)
- For the Selection Guide, Load Ratings and Speed Limits, see the Spherical Roller Bearings Engineering section on pages 15 - 27.
- Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

Interchange: QAAFY, QAAFL

Photo Shows a 4-Bolt Spherical Roller Bearing Flanged Unit

Product Features

- Corrosion-resistant powder coating
 - Cast iron housing
 - Misalignment capabilities - total of 4°
 - Broad range of sealing options
 - Factory set clearance & lubrication
 - Precision ground & superfinished raceways
 - Two hardened spring locking collars
 - Field interchangeable seals
- See Features and Benefits for additional info on pages 10 - 13.

Additional Notes

- Please call 1-866-REXNORD for availability
- Metric bore sizes available, see Rex Interchangeability guide
- Lubrication fitting tap size: for size code 4 thru 11, 1/8" PT; for all other size codes, 1/4" PT
- Bore size = nominal shaft size +.001 in/-.000 in (+0.03 mm/-0.00 mm)
- Machined pilot available, add suffix S
- Expansion - size code 4 thru 8 is 3/8", size code 9 thru 11 is 1/2" & size code 12 thru 13 is 3/4"
- Seals - To specify G, K or M seal, replace "Z" in part number with "G", "K" or "M"

- "K" seals only available in size codes 4 thru 11
- Auxiliary end caps - available in all size codes except for size codes 4 thru 6 on flange side of piloted bearings and size code 12 ZFS bearings
- Pilot Diameter tolerance, +.000 in/-.003 in (+0.00 mm/-0.08 mm)
- For the Selection Guide, Load Ratings and Speed Limits, see the Spherical Roller Bearings Engineering section on pages 15 - 27.
- Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

ZF6000, ZFS6000
Interchange: QVFX, QVVF

Photo Shows a 4-Bolt Spherical Roller Bearing Flanged Unit

Product Features

- Spyglass Optical Strain Sensor (OSS) Technology
- Positive locking system
- Tapered adapter sleeve
- Corrosion-resistant powder coating
- Cast iron housing
- Misalignment capabilities - total of 4°
- Broad range of sealing options
- Factory set clearance & lubrication
- Precision ground & superfinished raceways
- See Features and Benefits for additional info on pages 10 - 13.

Product Features

- Corrosion-resistant powder coating
- Cast iron housing
- Misalignment capabilities - total of 4°
- Broad range of sealing options
- Factory set clearance & lubrication
- Precision ground & superfinished raceways
- Enhanced life mounting style
- Field interchangeable seals
- Fixed or Expansion - up to 3/4" expansion
- See Features and Benefits for additional info on pages 10 - 13.

Additional Notes

- Please call 1-866-REXNORD for availability
- Lubrication fitting tap size: for size code 7 thru 11, 1/8" PT; for all other size codes, 1/4" PT
- Machined pilot available, add suffix S
- Expansion - size code 7 thru 8 is 3/8", size code 9 thru 11 is 1/2" & size code 12 thru 13 is 3/4"
- Seals - To specify G, K or M seal, replace "Z" in part number with "G", "K" or "M"
- "K" seals only available in size codes 7 thru 11

Auxiliary end caps - available in all size codes except size code 12 ZFS bearings
 For the Selection Guide, Load Ratings and Speed Limits, see the Spherical Roller Bearings Engineering section on pages 15 - 27.

Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

ZEF2000

Interchange: EF4BS2, F4BE, FYE, USFBE5000, RFBA, QAF, E4BFTRB

Photo Shows a 4-Bolt Spherical Roller Bearing Flanged Unit

Product Features

- Corrosion-resistant powder coating
- Cast iron housing
- Misalignment capabilities - total of 4°
- Broad range of sealing options
- Factory set clearance & lubrication
- Precision ground & superfinished raceways
- Hardened spring locking collar
- Field interchangeable seals
- See Features and Benefits for additional info on pages 10 - 13.

Photo Shows a 4-Bolt Spherical Roller Bearing Flanged Cartridge Unit

Product Features

- Corrosion-resistant powder coating
 - Cast iron housing
 - Misalignment capabilities - total of 4°
 - Broad range of sealing options
 - Factory set clearance & lubrication
 - Precision ground & superfinished raceways
 - Hardened spring locking collar
 - Field interchangeable seals
- See Features and Benefits for additional info on pages 10 - 13.

Additional Notes

- Please call 1-866-REXNORD for availability
- Metric bore sizes available, see Rex Interchangeability guide
- Lubrication fitting tap size, 1/8" PT
- Bore size = nominal shaft size +.001 in/-.000 in (+0.03 mm/-0.00 mm)
- Pilot Diameter tolerance, +.000 in/-.002 in (+0.00 mm/-0.05 mm)
- Bore tolerance for mounting, +.002 in/-.000 in (+0.05 mm/-0.00 mm)
- Seals - To specify G, K or M seal, replace "Z" in part number with "G", "K" or "M"

- Auxiliary end caps - available in all size codes except for size codes 2 & 3
- "G" seals available in size codes 3 thru 11
- For the Selection Guide, Load Ratings and Speed Limits, see the Spherical Roller Bearings Engineering section on pages 15 - 27.
- Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

ZBR3000

Photo Shows a 4-Bolt Spherical Roller Bearing Flanged Cartridge Unit

Product Features

- Corrosion-resistant powder coating
- Cast iron housing
- Misalignment capabilities - total of 4°
- Broad range of sealing options
- Factory set clearance & lubrication
- Precision ground & superfinished raceways
- Eccentric locking collar
- Field interchangeable seals
- See Features and Benefits for additional info on pages 10 - 13.

Additional Notes

Please call 1-866-REXNORD for availability
 Metric bore sizes available, see Rex Interchangeability guide
 Lubrication fitting tap size: for size code 4 thru 11, 1/8" PT; for all other size codes, 1/4" PT
 Bore size = nominal shaft size +.001 in/- .000 in (+0.03 mm/-0.00 mm)
 Pilot Diameter tolerance, +.000 in/- .002 in (+0.00 mm/-0.05 mm) for size codes 4 thru 13
 Pilot Diameter tolerance, +.000"/-.005" for size codes 14 thru 16
 Bore tolerance for mounting, +.002 in/- .000 in (+0.05 mm/-0.00 mm) for size codes 4 thru 13

Bore tolerance for mounting, +.005"/-.000" for size codes 14 thru 16
 Seals - To specify G, K or M seal, replace "Z" in part number with "G", "K" or "M"
 "G" seals only available in size codes 4 thru 13
 "K" seals only available in size codes 4 thru 11
 Auxiliary end caps - available in all size codes
 For the Selection Guide, Load Ratings and Speed Limits, see the Spherical Roller Bearings Engineering section on pages 15 - 27.
 Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

ZBR6000

Interchange: FCIP, USFC5000A, USFCE5000A, QVCW, QVVCW

Photo Shows a 4-Bolt Spherical Roller Bearing Flanged Cartridge Unit

Product Features

- Spyglass Optical Strain Sensor (OSS) Technology
- Positive locking system
- Tapered adapter sleeve
- Corrosion-resistant powder coating
- Cast iron housing
- Misalignment capabilities - total of 4°
- Broad range of sealing options
- Factory set clearance & lubrication
- Precision ground & superfinished raceways
- See Features and Benefits for additional info on pages 10 - 13.

- Seals - to specify G, K or M seal, replace "Z" in part number with "G", "K" or "M"

- Auxiliary end caps - not available
- For the Selection Guide, Load Ratings and Speed Limits, see the Spherical Roller Bearings Engineering section on pages 15 - 27.
- Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

ZCS5000

Photo Shows a Spherical Roller Bearing Cartridge Unit with Steel Housing

Product Features

- Steel housing
- Misalignment capabilities - total of 4°
- Broad range of sealing options
- Factory set clearance & lubrication
- Precision ground & superfinished raceways
- Two hardened spring locking collars
- Field interchangeable seals
- See Features and Benefits for additional info on pages 10 - 13.

Additional Notes

- Please call 1-866-REXNORD for availability
- Lubrication fitting tap size, 1/8" PT
- Bore size = nominal shaft size +.001 in/- .000 in (**+0.03 mm/-0.00 mm**)
- O.D. tolerance, +.000 in/- .002 in (**+0.00 mm/-0.05 mm**)
- Bore Tolerance for mounting, +.002 in/- .000 in (**+0.05 mm/-0.00 mm**)
- Seals - to specify G, K or M seal, replace "Z" in part number with "G", "K" or "M"

Auxiliary end caps - not available

For the Selection Guide, Load Ratings and Speed Limits, see the Spherical Roller Bearings Engineering section on pages 15 - 27.

Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

ZMC5000

Photo Shows a Spherical Roller Bearing Cartridge Unit with Cast Iron Housing

Product Features

- Corrosion-resistant powder coating
- Cast iron housing
- Misalignment capabilities - total of 4°
- Broad range of sealing options
- Factory set clearance & lubrication
- Precision ground & superfinished raceways
- Two hardened spring locking collars
- Field interchangeable seals
- See Features and Benefits for additional info on pages 10 - 13.

Additional Notes

Please call 1-866-REXNORD for availability
 Metric bore sizes available, see Rex Interchangeability guide
 Lubrication fitting tap size: for size code 4 thru 11, 1/8" PT; for all other size codes, 1/4" PT
 Bore size = nominal shaft size +.001 in/-.000 in (+0.03 mm/-0.00 mm)
 O.D. tolerance, for size code 4 thru 11 +.000 in/-.002 in (+0.00 mm/-0.05 mm); for all other size codes, +.000 in/-.003 in (+0.00 mm/-0.08 mm)
 Bore Tolerance for mounting, +.002 in/-.000 in (+0.05 mm/-0.00 mm)

Seals - to specify G, K or M seal, replace "Z" in part number with "G", "K" or "M"
 "G" seals only available in size codes 4 thru 13
 "K" seals only available in size codes 4 thru 11
 Auxiliary end caps - not available
 For the Selection Guide, Load Ratings and Speed Limits, see the Spherical Roller Bearings Engineering section on pages 15 - 27.
 Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

ZMC6000

Photo Shows a Spherical Roller Bearing Cartridge Unit with Cast Iron Housing

Product Features

- Spyglass Optical Strain Sensor (OSS) Technology
- Positive locking system
- Tapered adapter sleeve
- Corrosion-resistant powder coating
- Cast iron housing
- Misalignment capabilities - total of 4°
- Broad range of sealing options
- Factory set clearance & lubrication
- Precision ground & superfinished raceways
- See Features and Benefits for additional info on pages 10 - 13.

Additional Notes

- Please call 1-866-REXNORD for availability
- Lubrication fitting tap size: for size code 7 thru 11, 1/8" PT; for all other size codes, 1/4" PT
- Bore size = nominal shaft size +.001 in/-.000 in (+0.03 mm/-0.00 mm)
- O.D. tolerance, for size code 7 thru 11 +.000 in/-.002 in (+0.00 mm/-0.05 mm); for all other size codes, +.000 in/-.003 in (+0.00 mm/-0.08 mm)
- Bore Tolerance for mounting, +.002 in/-.000 in (+0.05 mm/-0.00 mm)
- Seals - to specify G, K or M seal, replace "Z" in part number with "G", "K" or "M"

- "G" seals only available in size codes 7 thru 13
- "K" seals only available in size codes 7 thru 11
- Auxiliary end caps - not available
- For the Selection Guide, Load Ratings and Speed Limits, see the Spherical Roller Bearings Engineering section on pages 15 - 27.
- Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

ZT2000

Interchange: WSTUS2, WSTUE, TBR, USTU5000, QATU, ETUTRB

Photo Shows a Spherical Roller Bearing Take-up Unit

Product Features

- Corrosion-resistant powder coating
- Cast iron housing
- Misalignment capabilities - total of 4°
- Broad range of sealing options
- Factory set clearance & lubrication
- Precision ground & superfinished raceways
- Hardened spring locking collar
- Field interchangeable seals
- See Features and Benefits for additional info on pages 10 - 13.

Additional Notes

- Please call 1-866-REXNORD for availability
- Metric bore sizes available, see Rex Interchangeability guide
- Lubrication fitting tap size, 1/8" PT
- Bore size = nominal shaft size +.001 in/-.000 in (+0.03 mm/-0.00 mm)
- Take-up slot spacing & width tolerance, +.005 in/-.015 in (+0.13 mm/-0.38 mm)
- Seals - to specify G, K or M seal, replace "Z" in part number with "G", "K" or "M"
- Auxiliary end caps - available in all size codes except for size codes 2 & 3

- "G" seals only available in size codes 3 thru 11
- Allowable working load is 2/3 yield strength
- For the Selection Guide, Load Ratings and Speed Limits, see the Spherical Roller Bearings Engineering section on pages 15 - 27.
- Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

ZT3000

Interchange: QMTU

Photo Shows a Spherical Roller Bearing Take-up Unit

Product Features

- Corrosion-resistant powder coating
- Cast iron housing
- Misalignment capabilities - total of 4°
- Broad range of sealing options
- Factory set clearance & lubrication
- Precision ground & superfinished raceways
- Hardened eccentric locking collar
- Field interchangeable seals
- See Features and Benefits for additional info on pages 10 - 13.

Additional Notes

Please call 1-866-REXNORD for availability
 Metric bore sizes available, see Rex Interchangeability guide
 Lubrication fitting tap size: for size code 4 thru 11, 1/8" PT: for all other size codes, 1/4" PT
 Bore size = nominal shaft size +.001 in/-.000 in (+0.03 mm/-0.00 mm)
 Take-up slot spacing & width tolerance, +.005 in/-.015 in (+0.13 mm/-0.38 mm)
 Seals - to specify G, K or M seal, replace "Z" in part number with "G", "K" or "M"
 "K" seals only available in size codes 4 thru 11

"G" seals only available in size codes 4 thru 13
 Auxiliary end caps - available in all size codes
 Allowable working load is 2/3 yield strength
 For the Selection Guide, Load Ratings and Speed Limits, see the Spherical Roller Bearings Engineering section on pages 15 - 27.
 Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

ZT6000

Interchange: WSTUIP, TBR-N, USTU5000A, QVVTU

Photo Shows a Spherical Roller Bearing Take-up Unit

Product Features

- Spyglass Optical Strain Sensor (OSS) Technology
- Positive locking system
- Tapered adapter sleeve
- Corrosion-resistant powder coating
- Cast iron housing
- Misalignment capabilities - total of 4°
- Broad range of sealing options
- Factory set clearance & lubrication
- Precision ground & superfinished raceways
- See Features and Benefits for additional info on pages 10 - 13.

Additional Notes

- Please call 1-866-REXNORD for availability
- Lubrication fitting tap size: for size code 4 thru 11, 1/8" PT; for all other size codes, 1/4" PT
- Take-up slot spacing & width tolerance, +.005 in/-.015 in (**+0.13 mm/-0.38 mm**)
- Seals - to specify G, K or M seal, replace "Z" in part number with "G", "K" or "M"
- "G" seal only available in size codes 4 thru 13
- "K" seals only available in size codes 4 thru 11

- Auxiliary end caps - available in all size codes
- Allowable working load is 2/3 yield strength
- For the Selection Guide, Load Ratings and Speed Limits, see the Spherical Roller Bearings Engineering section on pages 15 - 27.
- Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

Product Features

- Corrosion-resistant powder coating
- Cast iron housing
- Misalignment capabilities - total of 4°
- Broad range of sealing options
- Factory set clearance & lubrication
- Precision ground & superfinished raceways
- Enhanced life mounting style
- Field interchangeable seals
- See Features and Benefits for additional info on pages 10 - 13.

Additional Notes

Please call 1-866-REXNORD for availability
 Metric bore sizes available, see Rex Interchangeability guide
 Lubrication fitting tap size: for size code 5 thru 11, 1/8" PT; for all other size codes, 1/4" PT
 Bore size = nominal shaft size +.001 in/-.000 in (+0.03 mm/-0.00 mm)
 Seals - To specify G, K or M seal, replace "Z" in part number with "G", "K" or "M"
 "G" seals only available in size codes 5 thru 13

"K" seals only available in size codes 5 thru 11
 Auxiliary end caps - available in all size codes
 Allowable working load is 2/3 yield strength
 For the Selection Guide, Load Ratings and Speed Limits, see the Spherical Roller Bearings Engineering section on pages 15 - 27.
 Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

ZHT6000

Photo Shows a Center Pull Take-up Frame with Spherical Roller Bearing Take-up Unit

Product Features

- Spyglass Optical Strain Sensor (OSS) Technology
- Positive locking system
- Tapered adapter sleeve
- Center pull type frame
- Corrosion-resistant powder coating
- Cast iron housing
- Misalignment capabilities - total of 3°
- Broad range of sealing options
- Factory set clearance & lubrication
- See Features and Benefits for additional info on pages 10 - 13.

Additional Notes

- Please call 1-866-REXNORD for availability
- Lubrication fitting tap size: for size code 6 thru 11, 1/8" PT; for all other size codes, 1/4" PT
- Seals - To specify G, K or M seal, replace "Z" in part number with "G", "K" or "M"
- "K" seals only available in size codes 5 thru 11
- Auxiliary end caps - available in all size codes
- Allowable working load is 2/3 yield strength

For the Selection Guide, Load Ratings and Speed Limits, see the Spherical Roller Bearings Engineering section on pages 15 - 27.

Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

Photo Shows a Center Pull Spring Loaded Take-up Frame with Spherical Roller Bearing Take-up Unit

Product Features

- Center pull type spring loaded frame
- Corrosion-resistant powder coating
- Cast iron housing
- Misalignment capabilities - total of 3°
- Broad range of sealing options
- Factory set clearance & lubrication
- Precision ground & superfinished raceways
- Field interchangeable seals
- See Features and Benefits for additional info on pages 10 - 13.

Additional Notes

- Please call 1-866-REXNORD for availability
- Metric bore sizes available, see Rex Interchangeability guide
- Lubrication fitting tap size, 1/8" PT
- Bore size = nominal shaft size +.001 in/-.000 in (+0.03 mm/-0.00 mm)
- Seals - To specify "G", K or M seal, replace "Z" in part number with "G", "K" or "M"
- Auxiliary end caps - available in all size codes
- Allowable working load is 2/3 yield strength

For the Selection Guide, Load Ratings and Speed Limits, see the Spherical Roller Bearings Engineering section on pages 15 - 27.

Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

Photo Shows a Protected Screw Type Take-up Frame with Spherical Roller Bearing Take-up Unit

Product Features

- Protected screw type frame
- Corrosion-resistant powder coating
- Cast iron housing
- Misalignment capabilities - total of 3°
- Broad range of sealing options
- Factory set clearance & lubrication
- Precision ground & superfinished raceways
- Field interchangeable seals
- See Features and Benefits for additional info on pages 10 - 13.

Additional Notes

Please call 1-866-REXNORD for availability
 Metric bore sizes available, see Rex Interchangeability guide
 Lubrication fitting tap size, 1/8" PT
 Bore size = nominal shaft size +.001 in/-.000 in (+0.03 mm/-0.00 mm)
 Seals - To specify G, K or M seal, replace "Z" in part number with "G", "K" or "M"
 Auxiliary end caps - available in all size codes
 Allowable working load is 2/3 yield strength

For the Selection Guide, Load Ratings and Speed Limits, see the Spherical Roller Bearings Engineering section on pages 15 - 27.
 Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

ZNT6000

Photo Shows a Protected Screw Type Take-up Frame with Spherical Roller Bearing Take-up Unit

Product Features

- Spyglass Optical Strain Sensor (OSS) Technology
- Positive locking system
- Tapered adapter sleeve
- Protected screw type frame
- Corrosion-resistant powder coating
- Cast iron housing
- Misalignment capabilities - total of 3°
- Broad range of sealing options
- Factory set clearance & lubrication
- See Features and Benefits for additional info on pages 10 - 13.

Additional Notes

Please call 1-866-REXNORD for availability
 Lubrication fitting tap size, 1/8" PT
 Bore size = nominal shaft size +.001 in/-.000 in (+0.03 mm/-0.00 mm)
 Seals - To specify G, K or M seal, replace "Z" in part number with "G", "K" or "M"
 Auxiliary end caps - available in all size codes
 Allowable working load is 2/3 yield strength
 For the Selection Guide, Load Ratings and Speed Limits, see the Spherical Roller Bearings Engineering section on pages 15 - 27.

Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

ZAT2000

Photo Shows a Center Pull, Side Mounted Take-up Frame with Spherical Roller Bearing Take-up Unit

Product Features

- Center pull side mounted frame
- Corrosion-resistant powder coating
- Cast iron housing
- Misalignment capabilities - total of 3°
- Broad range of sealing options
- Factory set clearance & lubrication
- Precision ground & superfinished raceways
- Field interchangeable seals
- See Features and Benefits for additional info on pages 10 - 13.

Additional Notes

- Please call 1-866-REXNORD for availability
- Metric bore sizes available, see Rex Interchangeability guide
- Lubrication fitting tap size, 1/8" PT
- Bore size = nominal shaft size +.001 in/-.000 in (+0.03 mm/-0.00 mm)
- Seals - To specify G, K or M seal, replace "Z" in part number with "G", "K" or "M"
- "G" seals available in size codes 6 thru 13
- "K" seals available in size codes 6 thru 11

- Auxiliary end caps - available in all size codes
- Allowable working load is 2/3 yield strength
- For the Selection Guide, Load Ratings and Speed Limits, see the Spherical Roller Bearings Engineering section on pages 15 - 27.
- Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

Photo Shows a Spherical Roller Bearing Duplex Unit

Product Features

- Corrosion-resistant powder coating
- Cast iron housing
- Misalignment capabilities - total of 4°
- Broad range of sealing options
- Factory set clearance & lubrication
- Precision ground & superfinished raceways
- Hardened spring locking collar
- Field interchangeable seals
- See Features and Benefits for additional info on pages 10 - 13.

Additional Notes

- Please call 1-866-REXNORD for availability
- Metric bore sizes available, see Rex Interchangeability guide
- Bore size = nominal shaft size +.001 in/-.000 in (+0.03 mm/-0.00 mm)
- Outer race O.D. tolerance, +.000"/-.001" (-0.00 mm/+0.03 mm)
- Recommended housing bore diameter tolerance, +.002"/-.000" (+0.05 mm/-0.00 mm)
- Seals - To specify G, K or M seal, replace "Z" in part number with "G", "K" or "M"
- Auxiliary end caps - not available

For the Selection Guide, Load Ratings and Speed Limits, see the Spherical Roller Bearings Engineering section on pages 15 - 27.
 Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

ZD5000

Photo Shows a Spherical Roller Bearing Duplex Unit

Product Features

- Corrosion-resistant powder coating
- Cast iron housing
- Misalignment capabilities - total of 4°
- Broad range of sealing options
- Factory set clearance & lubrication
- Precision ground & superfinished raceways
- Two hardened spring locking collars
- Field interchangeable seals
- See Features and Benefits for additional info on pages 10 - 13.

SHURLOK Installation Tools

Rex is pleased to offer a quick installation tool for the SHURLOK bearing. This tool is designed as a supplement to the spanner wrench or drift pin method. The installation tool can be attached to a 3/4" or 1/2" drive ratchet, torque wrench, or breaker bar which can be used as a lever arm. Simply fit the installation tool over the locknut by placing the tool's teeth into the locknut slots. The tool's unique shape allows it to be used from the side or the top of the bearing. To order, refer to the table below for the installation tool that fits your shaft size.

Bearing Size	Wrench Style Installation Tool Part Number	Impact Style Installation Tool Part Number
107	N6107-SPN	N6107-IMP
111	N6111-SPN	N6111-IMP
115	105-90420-11	105-90425-11
203	105-90420-21	105-90425-21

Link-Belt Spherical Roller Bearings

Self-aligning double row spherical roller bearings are designed to distribute the load over the symmetrical rollers, assuring positive tracking and smooth operation. The large roller complement provides high capacity for radial or combined radial-thrust loads. Osculation clearance at the ends of the rollers compensates for shock loads and prevents destructive edge loading. These precision bearings with double contoured retainer pockets are designed to meet a broad range of application requirements.

1. Mounting feature

- B22400 Series – Spring locking collar locks inner ring securely to shaft.
- B22500 Series – Two spring locking collars lock inner ring securely to shaft.
- B22600 Series – Tapered adapter mounting system.

2. Choice of three seals

- Floating Labyrinth Type H
- Spring-Loaded Lip Type E
- Triple Lip Type E7

3. Long inner ring for high stability and load support

4. Self-aligning double row

Spherical roller bearing allows for +/- 2 degrees of misalignment to accommodate variations between shaft and support structure as well as shaft deflection during operation.

5. Double contoured retainer pockets

Assures accurate roller control.

6. One-piece cast iron or cast steel housing.

7. Slotted bolt holes in pillow block

Bases facilitate mounting; bottom of base is machined.

Spring Locking Collar(s) – B22400 & B22500 Series

The spring locking collar(s) design provides a secure grip of the wide inner ring bearing to the shaft. The setscrews extend through the inner ring of the bearing and lock firmly onto the shaft. Installation is fast and simple. Correctly tightening the setscrews produces elastic strain in the spring locking collar resulting in a continuous pressure on the setscrew threads and providing a positive lock.

Series B22400, B22500 & B22600 Spherical Roller Bearing Units and Take-ups – Features and Benefits

Series B22400 are single collar mounted spherical roller bearing units. Series B22500 are double collar mounted spherical roller bearing units. Series B22600 are adapter mounted spherical roller bearing units. These units provide economic and versatile arrangements for supporting shafts carrying substantial radial or combination radial and thrust loads. These units are especially adaptable for conveyors, elevators, general industrial machinery, heavier duty fans and blowers, power transmission applications, ditchers, trenchers, pavers and other such applications. These series of bearings are easy to mount, sealed, pre-lubricated and do not require bearing adjustment during mounting.

Adapter Mount – B22600 Series

The adapter mounting provides better concentricity and shaft control, increasing service life. Where Turned, Ground and Polished shafting is the norm on collar-mounted units, the maximized mounting power of the B22600 allows for Commercial Grade Shafting compatibility (a commonly used grade of shafting due to its price and availability). Shaft damage from set screws is eliminated with the B22600's improved mounting design. Shaft damage from the bearing inner ring fretting to the shaft (the result of a clearance or loose fit) is also eliminated. These improvements facilitate easier bearing removal, replacement bearing installation and longer shaft service life.

Interchangeable Seals

Three standard sealing systems are available; each offering maximum protection for various application conditions. These seals are interchangeable and are designed for grease lubrication.

Type H Seal

Type H floating labyrinth seals have multiple self-centering rings held securely in a steel carrier. Type H seals are normally furnished.

Type E Seal

Type E spring loaded lip seals utilize a spring to provide uniform pressure for keeping the sealing lip in contact with the inner ring. Type E seals are normally used for liquid splash environments.

Type E7 Seal

Type E7 triple lip seal with metal outboard guard is designed for the most severe of applications. The outboard metal guard protects the inner seal lips from abrasion and damage. The three molded, heavy contact lips provide excellent protection from abrasive media, dust and moisture.

One-Piece Cast Iron or Cast Steel Housings

Compact one-piece housings provide for strength and load support. Scientifically contoured housing design provides superior rigidity. Cast iron or cast steel pillow blocks have two or four slotted bolt holes with ample space provided for drilling dowel pin holes. Flanged and flanged cartridge units have drilled mounting

holes and machined mounting surfaces for maximum stability. Cartridge units have cast iron or steel housings and are finished to precision tolerances. Take-up units have machined slots for smooth, precise operation. Pillow blocks, flanged, and cartridge units are available for fixed or expansion operation.

Nomenclature

Symbol	Description	P	E -	B22	4	39	F	H	C	18A
C	Cartridge unit									
CSE	Cartridge unit; steel housing									
EF	Type E Flanged unit; 4-bolt square

Rating Code

4 - Excellent - Best seal for conditions listed.

3 - Good - Sealability is above average.

2 - Fair - Seal performs under intermittent conditions.

1 - Limited - Actual conditions must be known to evaluate sealability. Contact Rexnord for special assistance in the realm of materials and designs.

0 - Not acceptable - Will not effectively perform seal functions. Contact Rexnord for special assistance in the realm of materials and designs.

Seal Selection Guide

The choice of the seal for a mounted bearing is often the key to successful bearing operation and long service life. The SEAL SELECTION GUIDE incorporates years of Rexnord's experience against the wide variety of conditions encountered on actual applications. Following the simple selection procedure outlined can translate the benefits of that broad experience to the individual applications through the choice of the most effective seal.

How to Use the Selection Guide

1. The appropriate seal for a given application may be selected by comparing the job application conditions against those listed in the SEAL RATING GUIDE on this page.
2. When more than one application condition is present, the most appropriate seal may be selected based on prime sealing for the most detrimental condition, and secondary consideration given to the other application conditions.

Considerations in Addition to Seal Selection

Under certain adverse conditions, other changes should be considered to achieve maximum bearing life:

- A. High temperature lubricants where housing or ambient temperatures exceed +200°F,
- B. Special greases for additional bearing protection where excessive water, solvents or chemicals are present.
- C. EP (extreme pressure) greases where high load, high shock load, or continuous vibration is present.
- D. Readjustment of internal operating clearance of bearing where extreme high or low temperature conditions exist.

Refer to Seal Rating Guide shown above for speeds in excess of those listed in this table.

*Actual bearing speed limits are largely based upon the applied load and can be found on the Load Rating Table.

Series B22400, B22500 & B22600 Spherical Roller Bearing Selection Guide

To select a bearing, determine the applied radial load, the applied thrust load, the desired Rating Life, and applicable operating conditions. The procedure shown here will aid in selecting a bearing to meet an L₁₀ design life. The formulas for calculating life expectancy should be used to determine the Rating Life L₁₀ for the bearing selected.

The selection procedures and rating formulas shown here are in agreement with the American Bearing Manufacturers Association (ABMA) standards

and ANSI/ABMA Standards STD 11-1990. Ratings are based on fatigue life. The Rating Life L₁₀ or fatigue life at 90% reliability is the usual basis for bearing selection. For radial load applications only, Table 4, can be used to select a bearing or to determine L₁₀ life expectancy.

To assure a satisfactory bearing application, fitting practice, mounting, lubrication, sealing, static rating, housing strength, operating conditions and maintenance must be considered.

Steps for Selection

Step 1

Determine an appropriate L₁₀ design life.

Type of service	Operating time, hours per year	Design life, years	L ₁₀ design life, hours
Light seasonal usage	500 to 750	3-5	3,000
Heavy seasonal usage	1,400 to 1,600	4-6	8,000
Industrial—8 hour shift	2,000	10	20,000
Industrial—16 hour shift	4,000	10	40,000
Industrial—continuous	8,700	10	80,000 to 100,000

Step 2

Determine a required $\left(\frac{C}{P}\right)$ from Table 1.

Step 3

Calculate the required C and select a roller bearing.

a For radial load only:

$$P = F_r$$

$$\text{required } C = \left(\frac{C}{P}\right) P \text{ using } \left(\frac{C}{P}\right) \text{ from Step 2}$$

Select a roller bearing from Table 2 with a basic load rating C equal to or greater than the required C.

Step 3 (continued)

b For combined radial and thrust loads:

Select a trial roller bearing of the desired shaft size from Table 2.

Calculate the ratio of thrust load F_a to the radial load F_r .

$$\frac{F_a}{F_r}$$

Calculate the equivalent radial load P

$$P = X F_r + Y F_a$$

If $\frac{F_a}{F_r}$ is equal to or less than e, then $P = X_1 F_r + Y_1 F_a$

If $\frac{F_a}{F_r}$ is greater than e, then $P = X_2 F_r + Y_2 F_a$

For values of e, X₁, Y₁, X₂, and Y₂, see Table 2.

Calculate the required C

$$\text{required } C = \left(\frac{C}{P}\right) P \text{ using } \left(\frac{C}{P}\right) \text{ from Step 2.}$$

Consult Table 2, basic load rating. If a smaller bearing meets, or nearly meets, the required C, its life expectancy can be calculated.

Note: If the load P is greater than .25C, consult Rexnord Bearing Division.

Selection

Symbols for formulas:

C = basic load rating, pounds (or newtons)	n = speed, revolutions per minute
Co = static load rating, pounds (or newtons)	P = equivalent radial load, pounds (or newtons)
e = a reference value	X = radial factor
Fa = thrust load, pounds (or newtons)	Y = thrust factor
Fr = radial load, pounds (or newtons)	
L10 = rating life, hours

Basic Formula

$$\left(\frac{C}{P}\right) = \left(\frac{L_{10} \times n \times 60}{1,000,000}\right)^{3/10}$$

$$L_{10} = \frac{\left(\frac{C}{P}\right)^{10/3} \times 1,000,000}{n \times 60}$$

Life Expectancy

To calculate the Rating Life L₁₀ of any selected or trial bearing:

Step 1

Determine the equivalent radial load P.

a For radial load only:

$$P = F_r$$

b For combined radial and thrust load:

$$P = X F_r + Y F_a$$

if $\frac{F_a}{F_r}$ is equal to or less than e, then

$$P = X_1 F_r + Y_1 F_a$$

if $\frac{F_a}{F_r}$ is greater than e, then

$$P = X_2 F_r + Y_2 F_a$$

For values of e, X₁, Y₁, X₂, and Y₂, consult the appropriate bearing rating Table 2.

Step 2

Calculate the ratio of the basic load rating C to the equivalent radial load.

$$\left(\frac{C}{P}\right)$$

Step 3

Approximate the bearing life from Table 1.

Life Adjustment

The Rating Life, L₁₀, may be modified for some applications in accordance with the formula

$$L_n = a_1 a_2 a_3 L_{10}$$

where L_n = Adjusted life for (100-n) % reliability,

a₁ = Life adjustment factor for reliability

a₂ = Life adjustment factor

for material and processing

a₃ = Life adjustment factor for operating conditions.

For most normal applications, all factors will be taken as 1, and the Rating Life used as the selection basis or life estimate. In addition, as long as standard catalog bearings are used, a₂ will be normally set equal to one.

The factor a₃ covers such things as lubrication, misalignment, and temperature. Some conditions that could yield a₃ significantly different than unity include speeds less than 20000 DN or greater than 200000 DN, temperatures below -40°F (-40°C) or above 275°F (135°C). For other possible conditions, as well as additional information on life adjustment factors, consult Rexnord Bearing Division.

If the load P is greater than .25C, consult Rexnord Bearing Division.

For B22400 Series, reduce C Basic Load rating by 15%.

For B22500 Series, reduce C Basic Load rating by 5%.

For vertical shift application, consult Rexnord Bearing Division.

*Based on grease lubrication and moderate load.

Photo Shows a 2-Bolt Spherical Roller Bearing Pillow Block Unit

Product Features

- Corrosion-resistant powder coating
- Cast iron housing
- Misalignment capabilities - total of 4°
- Broad range of sealing options
- Factory set clearance & lubrication
- Hardened spring locking collar
- Field interchangeable seals
- Fixed or Expansion - total of 3/8" expansion
- See Features and Benefits for additional info on pages 132 - 133.

Additional Notes

Please call 1-866-REXNORD for availability
 Lubrication fitting tap size, 1/8" PT
 Base to centerline tolerance, +/- .005" (+/- 0.13 mm)
 Expansion - is 3/8" for all size codes
 H labyrinth seals standard

All size codes available with type E lip seals, except E7 in size code B416
 For the Selection Guide, Load Ratings and Speed Limits, see the Link-Belt Spherical Roller Bearings Engineering section on pages 135 - 140.

Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

Additional Notes

- Please call 1-866-REXNORD for availability
- Lubrication fitting tap size, 1/8" PT
- Base to centerline tolerance, +/- .005" (+/- 0.13 mm)
- Expansion - is 3/8" for all size codes
- H labyrinth seals standard
- All size codes available with type E lip seals & E7 triple lip seals

For the Selection Guide, Load Ratings and Speed Limits, see the Link-Belt Spherical Roller Bearings Engineering section on pages 135 - 140.

Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

PB22500, PEB22500, PB22500F, PEB22500F

Interchange: QAAPL, QAAPF

Photo Shows a 4-Bolt Spherical Roller Bearing Pillow Block Unit

Product Features

- Corrosion-resistant powder coating
- Cast iron housing
- Misalignment capabilities - total of 4°
- Broad range of sealing options
- Factory set clearance & lubrication
- Two hardened spring locking collars
- Field interchangeable seals
- Fixed or Expansion - total of 3/8" expansion
- See Features and Benefits for additional info on pages 132 - 133.

Additional Notes

Please call 1-866-REXNORD for availability
 Lubrication fitting tap size, 1/8" PT
 Base to centerline tolerance, +/- .005" (+/- 0.13 mm)
 Expansion - is 3/8" for all size codes
 H labyrinth seals standard

All size codes available with type E lip seals & E7 triple lip seals
 For the Selection Guide, Load Ratings and Speed Limits, see the Link-Belt Spherical Roller Bearings Engineering section on pages 135 - 140.
 Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

PKB22400F, PKEB22400F

Photo Shows a 4-Bolt Spherical Roller Bearing Pillow Block Unit

Product Features

- Corrosion-resistant powder coating
- Cast steel housing
- Misalignment capabilities - total of 4°
- Broad range of sealing options
- Factory set clearance & lubrication
- Hardened spring locking collar
- Field interchangeable seals
- Fixed or Expansion - total of 3/8" expansion
- See Features and Benefits for additional info on pages 132 - 133.

Additional Notes

- Please call 1-866-REXNORD for availability
- Lubrication fitting tap size, 1/8" PT
- Base to centerline tolerance, +/- .005" (+/- 0.13 mm)
- Expansion - is 3/8" for all size codes
- H labyrinth seals standard
- All size codes available with type E lip seals & E7 triple lip seals

For the Selection Guide, Load Ratings and Speed Limits, see the Link-Belt Spherical Roller Bearings Engineering section on pages 135 - 140.

Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

Photo Shows a 4-Bolt Spherical Roller Bearing Pillow Block Unit

Product Features

- Self-aligning type E interchange
- Corrosion-resistant powder coating
- Cast iron housing
- Misalignment capabilities - total of 4°
- Broad range of sealing options
- Factory set clearance & lubrication
- Hardened spring locking collar
- Field interchangeable seals
- Fixed or Expansion - total of 3/8" expansion
- See Features and Benefits for additional info on pages 132 - 133.

Additional Notes

Please call 1-866-REXNORD for availability
 Lubrication fitting tap size, 1/8 in PT
 Expansion - is 3/8 in for all size codes
 For expansion units, dimensions "G", "L" & "P" are minimum values.
 For maximum values, add 3/8 in
 H labyrinth seals standard

All size codes available with type E lip seals, except E7 in size code B416
 For the Selection Guide, Load Ratings and Speed Limits, see the Link-Belt Spherical Roller Bearings Engineering section on pages 135 - 140.
 Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

FB22600, FEB22600

Interchange: F4RIP, F4SIP, USFB5000A, QVFL, QVVFL

Photo Shows a 4-Bolt Spherical Roller Bearing Flanged Unit

Product Features

- Corrosion-resistant powder coating
- Cast iron housing
- Misalignment capabilities - total of 4°
- Broad range of sealing options
- Factory set clearance & lubrication
- Enhanced life mounting style
- Field interchangeable seals
- Fixed or Expansion - total of 3/8 in expansion
- See Features and Benefits for additional info on pages 132 - 133.

Additional Notes

- Please call 1-866-REXNORD for availability
- Lubrication fitting tap size, 1/8 in PT
- H labyrinth seals standard
- All size codes available with type E lip seals & E7 triple lip seals
- For the Selection Guide, Load Ratings and Speed Limits, see the Link-Belt Spherical Roller Bearings Engineering section on pages 135 - 140.

Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

EFB22600

Interchange: EF4BIP, USFBE5000A, QVF, QVVF, DVF

Photo Shows a 4-Bolt Spherical Roller Bearing Flanged Unit

Product Features

- Self aligning type E interchange
- Corrosion-resistant powder coating
- Cast iron housing
- Misalignment capabilities - total of 4°
- Broad range of sealing options
- Factory set clearance & lubrication
- Enhanced life mounting style
- Field interchangeable seals
- See Features and Benefits for additional info on pages 132 - 133.

Photo Shows a 4-Bolt Spherical Roller Bearing Flanged Cartridge Unit

Product Features

- Self aligning type E interchange
- Corrosion-resistant powder coating
- Cast iron housing
- Misalignment capabilities - total of 4°
- Broad range of sealing options
- Factory set clearance & lubrication
- Enhanced life mounting style
- Field interchangeable seals
- See Features and Benefits for additional info on pages 132 - 133.

Additional Notes

- Please call 1-866-REXNORD for availability
- Lubrication fitting tap size, 1/8 in PT
- Dimensions for "D", "L" & "P" based on unmounted condition
- Pilot Diameter tolerance, +.000 in/- .002 in (+0.00 mm/-0.05 mm)
- Bore tolerance for mounting, +.002 in/- .000 in (+0.05 mm/-0.00 mm)
- H labyrinth seals standard

All size codes available with type E lip seals & E7 triple lip seals
 For the Selection Guide, Load Ratings and Speed Limits, see the Link-Belt Spherical Roller Bearings Engineering section on pages 135 - 140.
 Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

Photo Shows a Spherical Roller Bearing Cartridge Unit with Steel Housing

Product Features

- Steel housing
- Misalignment capabilities - total of 4°
- Broad range of sealing options
- Factory set clearance & lubrication
- Hardened spring locking collar
- Field interchangeable seals
- See Features and Benefits for additional info on pages 132 - 133.

Additional Notes

Please call 1-866-REXNORD for availability
 O.D. tolerance, +.000 in/-.002 in (+0.00 mm/-0.05 mm)
 Bore tolerance for mounting, +.002 in/-.000 in (+0.05 mm/-0.00 mm)
 Expansion - is 3/8 in for all size codes
 *Expansion plug diameter .531 in (13.49 mm), engagement depth .125 in +/- .015 in (3.18 mm +/- 0.38 mm)
 Hole for fixed location & slot for expansion location in the same housing

H labyrinth seals standard
 All size codes available with type E lip seals, except E7 in size code B416
 For the Selection Guide, Load Ratings and Speed Limits, see the Link-Belt Spherical Roller Bearings Engineering section on pages 135 - 140.
 Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

Photo Shows a Spherical Roller Bearing Cartridge Unit with Steel Housing

Product Features

- Steel housing
- Misalignment capabilities - total of 4°
- Broad range of sealing options
- Factory set clearance & lubrication
- Two hardened spring locking collars
- Field interchangeable seals
- See Features and Benefits for additional info on pages 132 - 133.

Additional Notes

- Please call 1-866-REXNORD for availability
- Lubrication fitting tap size, 1/8 in PT
- Dimensions for "D", "P" & "U" based on unmounted condition
- O.D. tolerance, +.000 in/- .002 in (+0.00 mm/-0.05 mm)
- Bore tolerance for mounting, +.002 in/- .000 in (+0.05 mm/-0.00 mm)
- H labyrinth seals standard

All size codes available with type E lip seals & E7 triple lip seals
 For the Selection Guide, Load Ratings and Speed Limits, see the Link-Belt Spherical Roller Bearings Engineering section on pages 135 - 140.

Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

TB22400

Interchange: WSTUS2, WSTUE, TBR, USTU5000, QATU, ETUTRB

Photo Shows a Spherical Roller Bearing Take-up Unit

Product Features

- Corrosion-resistant powder coating
- Cast iron housing
- Misalignment capabilities - total of 4°
- Broad range of sealing options
- Factory set clearance & lubrication
- Hardened spring locking collar
- Field interchangeable seals
- See Features and Benefits for additional info on pages 132 - 133.

Additional Notes

- Please call 1-866-REXNORD for availability
- Lubrication fitting tap size, 1/8" PT
- For size code B464, frame has hinged top construction
- Frames with 18 in (457.20 mm) adjustment or more have center supporting pad welded to bottom of frame

- H labyrinth seals standard
- All size codes available with type E lip seals & E7 triple lip seals
- For the Selection Guide, Load Ratings and Speed Limits, see the Link-Belt Spherical Roller Bearings Engineering section on pages 135 - 140.
- Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

DSHB22500

Photo Shows a Hinged Top, Extra Strength Welded Steel Conveyor Take-up Frame with Spherical Roller Bearing Take-up Unit

Product Features

- Extra strength welded steel frame
- Corrosion-resistant powder coating
- Cast iron housing
- Misalignment capabilities - total of 4°
- Broad range of sealing options
- Factory set clearance & lubrication
- Field interchangeable seals
- See Features and Benefits for additional info on pages 132 - 133.

Rexnord PT Select Series Spherical Roller Bearings

1. Rugged cast iron housing
2. Total misalignment capability up to 2 degrees
3. Expansion and non-expansion units available
4. 90-degree mounting collar for superior holding strength

Additional Features and Benefits

- State-of-the-art design allows increased strength while optimizing material
- Industry-standard dimensions for interchangeability with leading brands
- Standard, off-the-shelf sizes for quick turnarounds needs
- Field installable/removable safety caps that are compatible with standard housings
- Rugged metal retainer for increased strength and durability
- Shaft ready and pre-lubricated with our standard grease for normal operation

Seal Types

Type T Triple Lip Seal

Three points of contact (shown above) provide superior ingress protection against contaminants.

Engineered bearing seals for increased product life

Designed for efficiency while maintaining the overall product strength, the bearing delivers the seal performance your environment requires.

- Standard triple lip and clearance seal provides maximum ingress protection against contaminants which are a leading cause of bearing failure (optional labyrinth seal available)
- Clearance seal reduces operating temperatures at higher speeds
- Features nitrile material with protective metal shield

Type C Clearance Seal

Also Available with These Housings

Rexnord PT Select Series Spherical Roller Bearing Selection Guide

To select a bearing, determine the applied radial load, the applied thrust load, the desired Rating Life, and applicable operating conditions. The procedure shown here will aid in selecting a bearing to meet an L₁₀ design life. The formulas for calculating life expectancy should be used to determine the Rating Life L₁₀ for the bearing selected.

The selection procedures and rating formulas shown here are in agreement with the American Bearing Manufacturers Association (ABMA) standards and ANSI/

ABMA Standards STD 11-1990. Ratings are based on fatigue life. The Rating Life L₁₀ or fatigue life at 90% reliability is the usual basis for bearing selection. For radial load applications only, Table 3, can be used to select a bearing or to determine L₁₀ life expectancy.

To assure a satisfactory bearing application, fitting practice, mounting, lubrication, sealing, static rating, housing strength, operating conditions and maintenance must be considered.

Steps for Selection

Step 1

Determine an appropriate L₁₀ design life.

Type of service	Operating time, hours per year	Design life, years	L ₁₀ design life, hours
Light seasonal usage	500 to 750	3-5	3,000
Heavy seasonal usage	1,400 to 1,600	4-6	8,000
Industrial—8 hour shift	2,000	10	20,000
Industrial—16 hour shift	4,000	10	40,000
Industrial—continuous	8,700	10	80,000 to 100,000

Step 2

Determine a required $\left(\frac{C}{P}\right)$ from Table 1.

Step 3

Calculate the required C and select a roller bearing.

a For radial load only:

$$P = F_r$$

$$\text{required } C = \left(\frac{C}{P}\right) P \text{ using } \left(\frac{C}{P}\right) \text{ from Step 2}$$

Select a roller bearing from Table 2 with a basic load rating C equal to or greater than the required C.

Step 3 (continued)

b For combined radial and thrust loads:

Select a trial roller bearing of the desired shaft size from Table 2.

Calculate the ratio of thrust load F_a to the radial load F_r .

$$\frac{F_a}{F_r}$$

Calculate the equivalent radial load P

$$P = X F_r + Y F_a$$

If $\frac{F_a}{F_r}$ is equal to or less than e, then $P = X_1 F_r + Y_1 F_a$

If $\frac{F_a}{F_r}$ is greater than e, then $P = X_2 F_r + Y_2 F_a$

For values of e, X₁, Y₁, X₂, and Y₂, see Table 2.

Calculate the required C

$$\text{required } C = \left(\frac{C}{P}\right) P \text{ using } \left(\frac{C}{P}\right) \text{ from Step 2.}$$

Consult Table 2, basic load rating. If a smaller bearing meets, or nearly meets, the required C, its life expectancy can be calculated.

Note: If the load P is greater than .25C, consult Rexnord Bearing Division.

Selection

Symbols for formulas:

- C = basic load rating, pounds (or newtons)
- Co = static load rating, pounds (or newtons)
- e = a reference value
- Fa = thrust load, pounds (or newtons)
- Fr = radial load, pounds (or newtons)
- L10 = rating life, hours
- n = speed, revolutions per minute
- P = equivalent radial load, pounds (or newtons)
- X = radial factor
- Y = thrust factor

Table 1 • Relation of L₁₀ life and speed to $\left(\frac{C}{P}\right)$

Basic Formula

$$\left(\frac{C}{P}\right) = \left(\frac{L_{10} \times n \times 60}{1,000,000}\right)^{3/10}$$

$$L_{10} = \frac{\left(\frac{C}{P}\right)^{10/3} \times 1,000,000}{n \times 60}$$

Life Expectancy

To calculate the Rating Life L₁₀ of any selected or trial bearing:

Step 1

Determine the equivalent radial load P.

a For radial load only:

$$P = F_r$$

b For combined radial and thrust load:

$$P = X F_r + Y F_a$$

if $\frac{F_a}{F_r}$ is equal to or less than e, then

$$P = X_1 F_r + Y_1 F_a$$

if $\frac{F_a}{F_r}$ is greater than e, then

$$P = X_2 F_r + Y_2 F_a$$

For values of e, X₁, Y₁, X₂, and Y₂, consult the appropriate bearing rating Table 2.

Step 2

Calculate the ratio of the basic load rating C to the equivalent radial load.

$$\left(\frac{C}{P}\right)$$

Step 3

Approximate the bearing life from Table 1.

Life Adjustment

The Rating Life, L₁₀, may be modified for some applications in accordance with the formula

$$L_n = a_1 a_2 a_3 L_{10}$$

where L_n = Adjusted life for (100-n) % reliability,

a₁ = Life adjustment factor for reliability

a₂ = Life adjustment factor

for material and processing

a₃ = Life adjustment factor for operating conditions.

For most normal applications, all factors will be taken as 1, and the Rating Life used as the selection basis or life estimate. In addition, as long as standard catalog bearings are used, a₂ will be normally set equal to one.

The factor a₃ covers such things as lubrication, misalignment, and temperature. Some conditions that could yield a₃ significantly different than unity include speeds less than 20000 DN or greater than 200000 DN, temperatures below -40°F (-40°C) or above 275°F (135°C). For other possible conditions, as well as additional information on life adjustment factors, consult Rexnord Bearing Division.

If the load P is greater than 25% of C, consult Rexnord Bearing Division.

For setscrew mounted bearings, reduce C Dynamic Load rating by 15%.

For vertical shaft application, consult Rexnord Bearing Division.

*Based on grease lubrication and moderate load.

Table 3 • Radial Load Ratings in Pounds at Various RPM for Appropriate L₁₀ Life Hours

If the load P is greater than 25% of the C, consult Rexnord Bearing Division.

For setscrew mounted bearings, reduce C Dynamic Load rating by 15%.

For vertical shaft application, consult Rexnord Bearing Division.

*Based on grease lubrication and moderate load.

P2B

Product Features

- Corrosion-resistant powder coating
- Cast iron housing
- Misalignment capabilities - total of 2°
- Triple lip seal standard; optional clearance seal
- Factory lubricated
- 90° grease fitting standard; straight fitting provided in box

Additional Notes

- Please call 1-866-REXNORD for availability
- Lubrication fitting tap size, 1/8" PT
- Bore size = nominal shaft size +.001 in/-.000 in (**+0.03 mm/-0.00 mm**)
- Open and Closed End Caps available on all shaft sizes
- For Selection Guide, Load Ratings and Speed Limits see Rexnord PT Select Series Engineering section on pages 194 - 197.
- Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

Product Features

- Type E Interchange
- Corrosion-resistant powder coating
- Cast iron housing
- Misalignment capabilities - total of 2°
- Triple lip seal standard; optional clearance seal
- Factory lubricated
- Straight grease fitting standard

Reminder: Size 12 Has 6 Mounting Bolts!

Series 6600, 6800, 6900, 7600, 7800, 7900, 22300, 22600 Spherical Roller Bearing

Self-aligning spherical roller bearing pillow blocks and take-ups provide high load carrying capacity for radial or combination radial and thrust loads.

They are designed for use on conveyors, dryers, road building equipment, runout tables, fans, crushers, hammermills and many other high-precision, heavy-duty applications.

1. Direct or Adapter Mounting

Spherical roller bearings may be direct or adapter mounted. Housings have provision for fixed or expansion mounting.

2. Choice of Seals

Type R multilabyrinth, D5 Pentac®, or Type D8 independently flushable seals — effectively retain lubricant and exclude contaminants.

3. Removable Housing Cap

Facilitates bearing mounting, inspection and maintenance.

4. Mating Surfaces are Machined

Caps and bases matched and marked.

5. Base and Cap are Dowelled for Accurate Assembly and Security

6. Oil or Grease Lubrication Ready

Large lubricant reservoir in base prolongs lubrication interval.

7. Slotted Bolt Holes

Slotted bolt holes in base facilitate mounting; machined finish on base for firm seating on supporting surface. Pry slots for easy cap removal.

8. Dimpled Flats for Bearing Monitor Probes

A Seal Choice for Every Environment

Metal Triple-Ring R Seal

This industry standard seal provides a labyrinth grease chamber between the housing grooves and the seal rings. Operates at high speed; good for moderate dust, dirt or moisture.

D5 Pentac 5-Point Sealing System

Rugged contact lip seal, molded on a Kevlar body, rotates with the shaft. The Pentac seal acts as a flinger, keeping debris away from the seal area, and provides five seal points.

D5 Pentac 5-Point Sealing System

- 1 - Seals shaft
- 2 - Seals housing
- 3 - Creates a grease chamber to prevent bearing contamination
- 4 - Acts as a flinger
- 5 - Grease chambers created by multi-labyrinth chamber

D8 Taconite Sealing System

A rugged cast carrier protects a metal labyrinth outboard seal and a spring-loaded inboard seal. When independently lubricated, the D8 system directs the grease between the two seals, purging all contaminants before they can reach the bearing chamber. Thousands are in use in the toughest applications worldwide.

Exclusive T Water Seal

Available on special order, this patented seal was developed for use on equipment which experiences constant water splash or frequent wash down. The unique T-shaped lip seal rides in a stainless steel carrier and rotates with the shaft. It seals the shaft and its one-way, double-contact lips allow for grease purge from the bearing chamber, but prevent the reverse flow of water or debris. The T seal is the standard in the environmental equipment industry. This bearing offers Pillow Blocks with special features for severe wash down environments. Black Rilsan Nylon 11 coated housings, stainless steel hardware and end caps or solid closed end housings, and the patented T contact water seal are the standard features of the BP-LB6800 series. Units may be further modified to meet specific needs.

Seal Comparison

	Triple Ring R Seal	Pentac D5 Seal	Taconite D8 Seal	Wash Down T Seal
Dirt/Dust	X	XX	XXX	X
Speed	XXX	XX	X	XX
Wash Downs	X	XX	XX	XXX
	x Good	xx Better	xxx Best	

Shaft	Part Number

Rating Code

4 - Excellent - Best seal for conditions listed.

3 - Good - Sealability is above average.

2 - Fair - Seal performs under intermittent conditions.

1 - Limited - Actual conditions must be known to evaluate sealability. Check "General Characteristic Guide" for construction as well as benefits and limitations for further evaluation.

0 - Not acceptable - Will not effectively perform seal functions. Contact Rexnord for special assistance in the realm of materials and designs.

Series 6600, 6800, 6900, 7600, 7800, 7900, 23000, 23100 and 23200 Selection Guide

To select a pillow block, determine the applied radial load, the applied thrust load, the desired Rating Life, the required minimum shaft size, and applicable operating conditions. The procedure shown here will aid in selecting a pillow block to meet an L_{10} design life. The formulas for calculating life expectancy should be used to determine the Rating Life L_{10} for the pillow block selected. Spherical roller bearing pillow blocks are available in Series 6600, 6800, 6900, 7600, 7800, 7900, 23000, 23100 and 23200. Because a number of series are available, several different pillow blocks that will fulfill and L_{10} life requirement can often be chosen.

Some of the factors to consider when choosing between series are: cost, speed limit, minimum shaft diameter, thrust load, space limitations, and type of shaft mounting.

The selection procedures and rating formulas shown here are in agreement with The American Bearing Manufacturers Association Standards and ANSI/ ABMA Standards STD 11-1990. Ratings are based on fatigue life.

The Rating Life L_{10} or fatigue life at 90% reliability is the usual basis for bearing selection.

For radial load applications only, Table 3 can be used to select a unit or to determine L_{10} life expectancy.

To assure a satisfactory bearing application, fitting practice, mounting, lubrication, sealing, static rating, housing strength, operating conditions and maintenance must be considered.

Steps for Selection

Step 1

Determine an appropriate L_{10} design life.

Type of service	Operating time, hours per year	Design life, years	L_{10} design life, hours
Heavy seasonal usage	1,400 to 1,600	4-6	8,000
Industrial—8 hour shift	2,000	10	20,000
Industrial—16 hour shift	4,000	10	40,000
Industrial—continuous	8,700	10	80,000 to 100,000
Industrial—High reliability	—	—	120,000 to 300,000

Step 2

Determine a required $\left(\frac{C}{P}\right)$ from Table 1.

Step 3

Calculate the required C and select a roller bearing pillow block.

a For radial load only: $P = F_r$

Required $C = \left(\frac{C}{P}\right) P$ using $\left(\frac{C}{P}\right)$ from Step 2

Select a roller bearing pillow block from Table 2 or Table 4 having a basic load rating C equal to or greater than the required C.

b For combined radial and thrust loads:

Select a roller bearing pillow block of the desired shaft size from Table 2 or Table 4 Calculate the ratio of thrust load F_a to the radial load F_r .

$$\frac{F_a}{F_r}$$

Calculate the equivalent radial load P

$$P = X F_r + Y F_a$$

If $\frac{F_a}{F_r}$ is equal to or less than e, then $P = X_1 F_r + Y_1 F_a$

If $\frac{F_a}{F_r}$ is greater than e, then $P = X_2 F_r + Y_2 F_a$

For values of e, X_1 , Y_1 , X_2 , and Y_2 , see Table 2 or Table 4

Required $C = \left(\frac{C}{P}\right) P$ using $\left(\frac{C}{P}\right)$ from Step 2

Consult the bearing rating Table 2 or Table 4, to see if the selected bearing meets or exceeds the required C. The life expectancy of other sizes and series of bearings can be calculated similarly.

Selection

Symbols for formulas:

C = basic load rating, pounds (or newtons)	L ₁₀ = rating life, hours
Co = static load rating, pounds (or newtons)	n = speed, revolutions per minute
e = a reference value	P = equivalent radial load, pounds (or newtons)
F _a = thrust load, pounds (or newtons)	X = radial factor
Fr = radial load, pounds (or newtons)	Y = thrust factor

Table 1 • Relation of L₁₀ life and speed to $\left(\frac{C}{P}\right)$

Basic Formula

$$\left(\frac{C}{P}\right) = \left(\frac{L_{10} \times n \times 60}{1,000,000}\right)^{3/10}$$

$$L_{10} = \frac{\left(\frac{C}{P}\right)^{10/3} \times 1,000,000}{n \times 60}$$

Life Expectancy

To calculate the Rating Life L₁₀ of any selected or trial bearing:

Step 1

Determine the equivalent radial load P.

a For radial load only:

$$P = Fr$$

b For combined radial and thrust load:

$$P = XF_r + YF_a$$

if $\frac{F_a}{F_r}$ is equal to or less than e, then

$$P = X1F_r + Y1F_a$$

if $\frac{F_a}{F_r}$ is greater than e, then

$$P = X2F_r + Y2F_a$$

For values of e, X1, Y1, X2, and Y2, consult the appropriate bearing rating Table 2 Table 4.

Step 2

Calculate the ratio of the basic load rating C to the equivalent radial load.

$$\left(\frac{C}{P}\right)$$

Step 3

Approximate the bearing life from Table 1.

Live Adjustment

The Rating Life, L₁₀, may be modified for some applications in accordance with the formula

$$L_n = a_1 a_2 a_3 L_{10}$$

where L_n = Adjusted life for (100-n) % reliability,

a₁ = Life adjustment factor for reliability

a₂ = Life adjustment factor

for material and processing

a₃ = Life adjustment factor for operating conditions.

For most normal applications, all factors will be taken as 1, and the Rating Life used as the selection basis or life estimate. In addition, as long as standard catalog bearings are used, a₂ will be normally set equal to one.

The factor a₃ covers such things as lubrication, misalignment, and temperature. Some conditions that could yield a₃ significantly different than unity include speeds less than 20000 DN or greater than 200000 DN, temperatures below -40°F (-40°C) or above 275°F (135°C). For other possible conditions, as well as additional information on life adjustment factors, consult Rexnord Bearing Division.

* Speed limits are based on the following:

1. Type R seals properly aligned.
 - a. For the type B seals, limit is 800 surface feet per minute (4.0 m/s) with good alignment.
 - b. For type D8 seals, limit is 1500 surface feet per minute (7.6 m/s) with good alignment.
2. Proper operating internal clearance.
3. Adequate lubrication and maintenance (special lubricants and/or more frequent relubrication may be required).
4. Normal room temperature environment and no extraneous heat sources, such that bearing operating temperature does not exceed 100°C (212°F).
5. Equivalent radial load not greater than 7% of C.
6. Axial load, if any, not greater than 20% of radial load.

D5 Pentac speed limits in the chart are based on pushing the Pentac seal against the housing face a distance of 1 mm as specified by the service instructions. The Pentac seal can be pressed in a distance of 2 mm for high contaminant environments. The speed limit at a 2 mm "Push-In" distance should be limited to 80% of those listed in the chart.

If the load P is greater than .25C, consult Rexnord Bearing Division.

*Speed limits are based on the following:

1. Negligible seal torque (e.g., non-contact seals)
2. Proper operating internal clearance.
3. Adequate lubrication and maintenance (special lubricants and/or more frequent relubrication may be required).
4. Normal room temperature environment and no extraneous heat sources, such that bearing operating temperature does not exceed 100°C (212°F).
5. Equivalent radial load not greater than 7% of C.
6. Axial load, if any, not greater than 20% of radial load.

Table 5 • Radial Load Ratings in Pounds at Various RPM for Appropriate L₁₀ Life Hours

PLB6800, PLB6800F, PLB6600F

Interchange: USAF 500, SAF22500

Photo Shows a 2-Bolt Spherical Roller Bearing Two-Piece Pillow Block Unit

Product Features

- Corrosion-resistant powder coating
- Two piece cast iron housing
- Broad range of sealing options
- Fixed or Expansion - up to 3/8 in expansion
- Matched base & cap
- Large reservoir for grease or oil storage
- Tapered adapter mounted
- See Features and Benefits for additional info on pages 206 - 207.

Additional Notes

Please call 1-866-REXNORD for availability
 Lubrication fitting tap size: for 4 1/2 in (115 mm) and smaller shaft sizes, 1/8 in PT: for all other shaft sizes, 1/4 in PT
 Expansion - is 1/4 in for 1 3/4 in (40 mm) and smaller shaft sizes: all other shaft sizes provide 3/8"
 Drain plug tap size - for 3 3/16 in (80 mm) and smaller shaft sizes, 1/8 in PT: for 3 7/16 in (90 mm) thru 6 in (150 mm), 1/4 in PT: for all other shaft sizes, 1/2 in PT
 Minimum extension of shaft beyond locknut, .06 in for closed end unit

Dimension "P" is recommended dimension for cap removal
 Multi-labyrinth seals standard
 All shaft sizes available with type D5 Pentac seals except when marked with a "*".
 For the Selection Guide, Load Ratings and Speed Limits, see the Link-Belt Split Housed Spherical Roller Bearings Engineering section on pages 210 - 223.
 Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

PLB6800D8, PLB6800FD8, PLB6600FD8

Photo Shows a 2-Bolt Spherical Roller Bearing Two-Piece Pillow Block Unit with Independently Flushable Seals

Product Features

- Corrosion-resistant powder coating
- Two piece cast iron housing
- Independently flushable seals
- Fixed or Expansion - up to 3/8 in expansion
- Matched base & cap
- Large reservoir for grease or oil storage
- Tapered adapter mounted
- See Features and Benefits for additional info on pages 206 - 207.

Additional Notes

- Please call 1-866-REXNORD for availability
- Lubrication fitting tap size: for 4 1/2 in (115 mm) and smaller shaft sizes, 1/8 in PT: for all other shaft sizes, 1/4 in PT
- Seal assembly lubrication fitting tap size: for 1 3/4 in and smaller shaft sizes, 1/4-28 UNF: for all other shaft sizes, 1/8 in PT
- Recommended shaft finish under D8 seals, 10-20 micro inches
- Expansion - is 1/4 in for 1 3/4 in (40 mm) and smaller shaft sizes: all other shaft sizes provide 3/8 in

- Drain plug tap size - for 3 3/16 in (80 mm) and smaller shaft sizes, 1/8 in PT: for 3 7/16 in (90 mm) thru 6 in (150 mm), 1/4 in PT: for all other shaft sizes, 1/2 in PT
- Minimum extension of shaft beyond locknut, .06 in for closed end unit
- Dimension "P" is recommended dimension for cap removal
- Taconite seals standard
- For the Selection Guide, Load Ratings and Speed Limits, see the Link-Belt Split Housed Spherical Roller Bearings Engineering section on pages 210 - 223.
- Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

BPLB6800

Photo Shows a 2-Bolt Spherical Roller Bearing Two-Piece Pillow Block Unit

Product Features

- Corrosion-resistant nylon coating
- Two piece cast iron housing
- Stainless steel hardware
- Patented T contact water seal
- Fixed or Expansion - up to 3/8 in expansion
- Matched base & cap
- Large reservoir for grease or oil storage
- Tapered adapter mounted
- See Features and Benefits for additional info on pages 206 - 207.

Additional Notes

- Please call 1-866-REXNORD for availability
- Lubrication fitting tap size, 1/4 in PT
- Expansion - is 3/8 in for all shaft sizes
- Drain plug tap size - for 6 in (150 mm) and smaller shaft sizes, 1/4 in PT; for all other shaft sizes, 1/2 in PT
- Minimum extension of shaft beyond locknut, .06 in for closed end unit
- Dimension "P" is recommended dimension for cap removal
- Multi-labyrinth seals standard

All shaft sizes available with type D5 Pentac seals except when marked with a "**".
 For the Selection Guide, Load Ratings and Speed Limits, see the Link-Belt Split Housed Spherical Roller Bearings Engineering section on pages 210 - 223.
 Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

PKLB6800FD8

Photo Shows a 2-Bolt Spherical Roller Bearing Two-Piece Pillow Block Unit with Independently Flushable Seals

Product Features

- Corrosion-resistant powder coating
- Two piece cast steel housing
- Independently flushable seals
- Fixed or Expansion - up to 3/8 in expansion
- Matched base & cap
- Large reservoir for grease or oil storage
- Tapered adapter mounted
- See Features and Benefits for additional info on pages 206 - 207.

Additional Notes

- Please call 1-866-REXNORD for availability
- Lubrication fitting tap size, 1/4 in PT
- Seal assembly lubrication fitting tap size, 1/8 in PT
- Recommended shaft finish under D8 seals, 10-20 micro inches
- Expansion - is 3/8 in for all shaft sizes
- Drain plug tap size - for 4 15/16 in and smaller shaft sizes, 1/4 in PT; for all other shaft sizes, 1/2 in PT
- Minimum extension of shaft beyond locknut, .06 in for closed end unit

- Dimension "P" is recommended dimension for cap removal
- Taconite seals standard
- For the Selection Guide, Load Ratings and Speed Limits, see the Link-Belt Split Housed Spherical Roller Bearings Engineering section on pages 210 - 223.
- Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

Additional Notes

- Please call 1-866-REXNORD for availability
- Lubrication fitting tap size: for 3.5433 in (90 mm) and smaller shaft sizes, 1/8 in PT: for all other shaft sizes, 1/4 in PT
- Expansion - is 3/8 in for all shaft sizes
- Drain plug tap size - for 3.5433 in (90 mm) and smaller shaft sizes, 1/8 in PT: for 3.9370 in (100 mm) thru 6.6929 in (170 mm), 1/4 in PT: for all other shaft sizes, 1/2 in PT
- Minimum extension of shaft beyond locknut, .06 in for closed end unit

- Dimension "P" is recommended dimension for cap removal
- Multi-labyrinth seals standard
- For the Selection Guide, Load Ratings and Speed Limits, see the Link-Belt Split Housed Spherical Roller Bearings Engineering section on pages 210 - 223.
- For shaft bearing seat diameters, see Link-Belt Spherical Roller Bearings Shaft & Housing Seat Diameters section on pages 266 - 269.
- Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

PKLB7800F, PKLB7600F

Photo Shows a 4-Bolt Spherical Roller Bearing Two-Piece Pillow Block Unit

Product Features

- Corrosion-resistant powder coating
- Two piece cast steel housing
- Fixed or Expansion - up to 3/8 in expansion
- Matched base & cap
- Large reservoir for grease or oil storage
- Direct shaft mounted
- See Features and Benefits for additional info on pages 206 - 207.

Fixed

Expansion

Additional Notes

- Please Call 1-866-REXNORD for availability
- Lubrication Fitting Tap Size, 1/4 in PT
- Expansion is 3/8 in for all shaft sizes
- Multi-labyrinth seals standard
- For the Selection Guide, Load Ratings and Speed Limits, see the Link-Belt Split Housed Spherical Roller Bearings Engineering section on pages 210 - 223.
- Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

PLB23100

Interchange: USDAF, SDAF23100

Photo Shows a 2-Bolt Spherical Roller Bearing Two-Piece Pillow Block Unit

Product Features

- Corrosion-resistant powder coating
- Two piece cast iron housing
- Fixed or Expansion - up to 3/8 in expansion
- Matched base & cap
- Large reservoir for grease or oil storage
- Direct shaft mounted
- See Features and Benefits for additional info on pages 206 - 207.

- Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

Photo Shows a Hinged Top, Welded Steel Conveyor Take-Up Frame with Spherical Roller Bearing Take-Up Unit

Product Features

- Protected screw type frame
- Corrosion-resistant powder coating
- Cast iron housing
- Independently flushable D8 seals
- Tapered adapter mounted
- See Features and Benefits for additional info on pages 206 - 207.

Additional Notes

- Please call 1-866-REXNORD for availability
- Expansion - is 3/8 in for all shaft sizes
- For shaft sizes 2 7/16 in thru 2 15/16 in, frame has removable top construction
- Frames with adjustment of 18" or more have center supporting pad welded to bottom of frame
- Taconite seals standard

For the Selection Guide, Load Ratings and Speed Limits, see the Link-Belt Split Housed Spherical Roller Bearings Engineering section on pages 210 - 223.
 Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

Additional Notes

*2-bolt base listed. For 4-bolt base add suffix F; i.e. PLB6839FR Pillow Block or PLB6839FR02 housing.

Housing part numbers listed above include seals and C-Spacer ring.

Series 22200, 22300, 23000, 23100, 23200 Spherical Roller Bearings

Self-aligning and self-contained spherical roller bearings provide high capacity for heavy-duty and high-precision applications. They are used extensively on earth-moving equipment, vibrating screens, steel mill and paper mill equipment, embossing rolls, printing presses, and torque converters.

1. Positive Roller Guidance is Provided from Rugged Retainer Design

2. Large High-capacity Rollers for Extended Bearing Life

3. Raceway Curvatures

Controlled raceway curvatures afford precise osculation clearance preventing roller edge loading.

4. Micro-finished Raceways Assure Smooth Operation

5. Maximum Lubrication

Outer ring groove and three symmetrically spaced holes for maximum lubrication access.

Series A20000 Spherical Roller Bearings

Self-aligning separable outer ring bearings of single row adjustable and double row adjustable or non adjustable types for high capacity and minimum space requirements. These compact bearings feature the latest design refinements.

1. Raceway Curvatures.

Controlled raceway curvatures afford precise osculation clearance to avoid edge loading and provide high capacity.

2. Steel Retainer Pockets.

Roller guidance is provided by double contoured coined steel retainer pockets.

3. Large rollers for extended bearing life.

4. Micro-finished raceways assure smooth operation.

Rollers

Rollers' symmetrical roller design permits natural roller positioning and distribution of load in dynamic operation. Curvatures of roller contact surfaces are contoured to control stress distribution under all combinations of radial and thrust loads within design capacities.

Rings

The geometry and sections of the outer and inner rings and rollers result in high capacity and long bearing life. Controlled raceway curvatures on inner and outer rings and rollers afford precise osculation clearances, preventing roller edge loading. Outer ring raceways are spherically finished to provide freedom of alignment under variable conditions.

Retainers

Double contoured deep coined pockets provide accurate roller guidance. Separate retainer for each row of rollers allows rollers to seek ultimate rolling path and operating angle for all radial/thrust load conditions.

Spherical Roller Bearing Series 22200, 22300, 23000, 23100, 23200 and 23900 Selection Guide

To select a pillow block, determine the applied radial load, the applied thrust load, the desired Rating Life, the required minimum shaft size, and applicable operating conditions. The procedure shown here will aid in selecting a pillow block to meet an L_{10} design life. The formulas for calculating life expectancy should be used to determine the Rating Life L_{10} for the pillow block selected. Spherical roller bearing pillow blocks are available in Series 22200, 22300, 23000, 23100, 23200, and 23900. Because a number of series are available, several different pillow blocks that will fulfill and L_{10} life requirement can often be chosen.

Some of the factors to consider when choosing between series are: cost, speed limit, minimum shaft diameter, thrust load, space limitations, and type of shaft mounting.

The selection procedures and rating formulas shown here are in agreement with The American Bearing Manufacturers Association Standards and ANSI/ ABMA Standards STD 11-1990. Ratings are based on fatigue life.

Steps for Selection

Step 1

Determine an appropriate L_{10} design life.

Type of service	Operating time, hours per year	Design life, years	L_{10} design life, hours
Heavy seasonal usage	1,400 to 1,600	4-6	8,000
Industrial—8 hour shift	2,000	10	20,000
Industrial—16 hour shift	4,000	10	40,000
Industrial—continuous	8,700	10	80,000 to 100,000
Industrial—High reliability	—	—	120,000 to 300,000

Step 2

Determine a required $\left(\frac{C}{P}\right)$ from Table 1.

Step 3

Calculate the required C and select a roller bearing pillow block.

a For radial load only: $P = F_r$

Required $C = \left(\frac{C}{P}\right)P$ using $\left(\frac{C}{P}\right)$ from Step 2

Select a roller bearing pillow block from Tables 2 - 7 having a basic load rating C equal to or greater than the required C.

The Rating Life L_{10} or fatigue life at 90% reliability is the usual basis for bearing selection.

To assure a satisfactory bearing application, fitting practice, mounting, lubrication, sealing, static rating, housing strength, operating conditions and maintenance must be considered.

b For combined radial and thrust loads:

Select a roller bearing pillow block of the desired shaft size from Tables 2 - 7
Calculate the ratio of thrust load F_a to the radial load F_r .

$$\frac{F_a}{F_r}$$

Calculate the equivalent radial load P

$$P = XF_r + YF_a$$

If $\frac{F_a}{F_r}$ is equal to or less than e, then $P = X_1F_r + Y_1F_a$

If $\frac{F_a}{F_r}$ is greater than e, then $P = X_2F_r + Y_2F_a$

For values of e, X_1 , Y_1 , X_2 , and Y_2 , see Tables 2 - 7

Required $C = \left(\frac{C}{P}\right)P$ using $\left(\frac{C}{P}\right)$ from Step 2

Consult the bearing rating Tables 2 - 7, to see if the selected bearing meets or exceeds the required C. The life expectancy of other sizes and series of bearings can be calculated similarly.

Selection

Symbols for formulas:

C = basic load rating, pounds (or newtons)	L ₁₀ = rating life, hours
C ₀ = static load rating, pounds (or newtons)	n = speed, revolutions per minute
e = a reference value	P = equivalent radial load, pounds (or newtons)
F _a = thrust load, pounds (or newtons)	X = radial factor
F _r = radial load, pounds (or newtons)	Y = thrust factor

Basic Formula

$$\left(\frac{C}{P}\right) = \left(\frac{L_{10} \times n \times 60}{1,000,000}\right)^{3/10}$$

$$L_{10} = \frac{\left(\frac{C}{P}\right)^{10/3} \times 1,000,000}{n \times 60}$$

Life Expectancy

To calculate the Rating Life L₁₀ of any selected or trial bearing:

Step 1

Determine the equivalent radial load P.

a For radial load only:

$$P = F_r$$

b For combined radial and thrust load:

$$P = X F_r + Y F_a$$

if $\frac{F_a}{F_r}$ is equal to or less than e, then

$$P = X_1 F_r + Y_1 F_a$$

if $\frac{F_a}{F_r}$ is greater than e, then

$$P = X_2 F_r + Y_2 F_a$$

For values of e, X₁, Y₁, X₂, and Y₂, consult the appropriate bearing rating Table 2 Table 4.

Step 2

Calculate the ratio of the basic load rating C to the equivalent radial load.

$$\left(\frac{C}{P}\right)$$

Step 3

Approximate the bearing life from Table 1.

Live Adjustment

The Rating Life, L₁₀, may be modified for some applications in accordance with the formula

$$L_n = a_1 a_2 a_3 L_{10}$$

where L_n = Adjusted life for (100-n) % reliability,

a₁ = Life adjustment factor for reliability

a₂ = Life adjustment factor

for material and processing

a₃ = Life adjustment factor for operating conditions.

For most normal applications, all factors will be taken as 1, and the Rating Life used as the selection basis or life estimate. In addition, as long as standard catalog bearings are used, a₂ will be normally set equal to one.

The factor a₃ covers such things as lubrication, misalignment, and temperature. Some conditions that could yield a₃ significantly different than unity include speeds less than 20000 DN or greater than 200000 DN, temperatures below -40°F (-40°C) or above 275°F (135°C). For other possible conditions, as well as additional information on life adjustment factors, consult Rexnord Bearing Division.

If the load P is greater than .25C, consult Rexnord Bearing Division.

Speed limits are based on the following:

1. Negligible seal torque (e.g., non-contact seals).
2. Proper operating internal clearance.
3. Adequate lubrication and maintenance (special lubricants and/or more frequent relubrication may be required).
4. Normal room temperature environment and no extraneous heat sources, such that bearing operating temperature does not exceed 100°C (212°F).
5. Equivalent radial load not greater than 7% of C.
6. Axial load, if any, not greater than 20% of radial load.

If the load P is greater than .25C, consult Rexnord Bearing Division.

Speed limits are based on the following:

1. Negligible seal torque (e.g., non-contact seals).
2. Proper operating internal clearance.
3. Adequate lubrication and maintenance (special lubricants and/or more frequent relubrication may be required).
4. Normal room temperature environment and no extraneous heat sources, such that bearing operating temperature does not exceed 100°C (212°F).
5. Equivalent radial load not greater than 7% of C.
6. Axial load, if any, not greater than 20% of radial load.

C2 = Internal clearance less than C0

C0 = Internal clearance

C3 = Internal clearance greater than C0

C4 = Internal clearance greater than C3

Shaft Bearing Seat Diameters

Bearing bore tolerances are in accord with the system of tolerancing established by the International Standards Organization (ISO) and adopted by the American Bearing Manufacturers Association (ABMA) and the American National Standards Institute (ANSI).

A system of limits and fits has been established by ISO for shafts. A portion of this system has been adopted by ABMA to provide flexibility in selecting shaft fits. Shaft fits are designated by a lower case letter and a number, such as h6. The letter indicates the location of the shaft tolerance limits with respect to the nominal bearing bore. The number indicates the size of the tolerance zone.

Shaft fits recommended for various types of applications are listed in the table at right. A graphic relationship of various shaft fits is illustrated in the figure at the left.

Many factors influence the proper fit on the bearing inner ring on a shaft. The magnitude of the load and its direction with respect to bearing inner or outer rings are generally the first factors considered in shaft fit selection. The effects of other factors such as vibration, shock, temperature, speed, etc. are of secondary importance but sometimes need to be considered. Where assembly or disassembly requirements are of prime importance special shaft fits may be required.

Appropriate diameter shafting is determined (as shown) from the tables below.

Class of Fit and Shaft Diameters

1µm = .001 mm

#The arithmetical mean of the largest and smallest single diameter to be within tolerance shown.

Allowable deviations from mean diameter per ANSI/ABMA STD 20, latest printing.

For additional shaft sizes, please consult Rexnord Bearing Engineering for proper fitting practices.

Class of Fit Selection

Operating condition			Examples	Nominal shaft diameter		Class of fit ■	Remarks
				mm	inches		
Inner ring stationary in relation to direction of load.	All loads	Inner ring has to be easily displaced	Wheel on stationary shaft	All diameters		g6	
		Inner ring does not have to be easily displaced	Tension pulleys and rope sheaves			h6

* Symbol L indicates a loose or clearance fit; Symbol T indicates a tight or interference fit.

■ For solid steel shafts.

★ = basic load rating of bearing.

The appropriate shaft diameter for any class of fit can be easily determined by applying the shaft tolerance to the nominal shaft diameter. Example: (Using basic bearing size 08 and fit class f6).

	inches		mm			
Nominal shaft diameter	=	1.5748	1.5748	=	40	40
Shaft diameter tolerance	=	-0.001	-0.0016	=	-0.025	-0.041
Resultant shaft diameter	=	1.5738	1.5732	=	39.975	39.959

Housing Bearing Seat Diameters

Bearing outside diameter tolerances are in accord with the system of tolerancing established by the International Standards Organization (ISO) and adopted by the American Bearing Manufacturers Association (ABMA) and the American National Standards Institute (ANSI).

A system of limits and fits has been established by ISO for shafts. A portion of this system has been adopted by ABMA to provide flexibility in selecting shaft fits. Housing fits are designated by a capital letter and a number, such as H7. The letter indicates the location of the housing bore tolerance limits with respect to the nominal bearing O.D. The number indicates the size of the tolerance zone.

Housing fits recommended for various types of applications are listed in the table at right. A graphic relationship of various housing fits is illustrated in the figure at the left.

The class of fit is determined by nature of loading (oscillating, vibrating, reversing, etc.), axial movement requirements, temperature conditions, housing material and cross section of housing.

Shaft expansion increases bearing center distances and requires all but one bearing on a shaft to be movable axially in the housing. In most bearings the outer rings are subjected to stationary loads which permit a loose housing fit.

Operating temperature may affect the housing fit, as the housing may dissipate heat rapidly and not expand with the outer ring. However, the loose fit must never be greater than necessary. Excessive looseness results in less accurate shaft centering and additional ring deformation under load.

The appropriate housing bores are determined (as shown) from the tables below.

Class of Fit and Housing Bores

The arithmetical mean of the largest and smallest single diameter to be within tolerance shown.

Allowable deviations from mean diameter per ANSI/ABMA STD 20, latest printing.

^A Symbol L indicates a loose or clearance fit. Symbol T indicates a tight or interference fit.

The appropriate housing bore for any class of fit can be easily determined by applying the housing tolerance to the nominal housing bore.

Example: (Using basic bearing size 09 and fit class G7).

For larger bearing sizes please consult Rexnord Bearing Engineering for proper housing fit practices.

			inches			mm
Nominal housing bore	=	3.3465	3.3465	=	85.000	85.000
Shaft bore tolerance	=	+ .0005	+ .0019	=	+ 0.012	+ 0.047
Resultant housing bore	=	3.3470	3.3484	=	85.012	85.047

Class of Fit Selection

Housing Construction	Operating Condition		Examples	Class of Fit	Remarks	
Housing not split radially	Housing rotating in relation to direction of load	Heavy loads on bearings in thin-walled housing	Supporting wheels in cranes, wheel hubs with roller bearings, crank bearings	P6*	Outer ring not axially displaceable	
		Normal and heavy loads	Wheel hubs with roller bearings, crank bearings	N6*		
		Light loads	Conveyor rollers, rope sheaves, tension pulleys	M6*		
Housing split or housing not split radially	Direction of load indeterminate	Heavy shock loads	Electrical fraction motors	K6*	Outer ring, as a rule, not axially displaceable	
		Heavy and normal loads where outer ring does not have to be axially displaceable	Electrical motors, pumps, crankshaft main bearings			
	Housing stationary in relation to direction of load	Normal and light loads where displaceability of outer ring is desirable		Journal boxes for rail vehicles	J6*	Outer ring as a rule, axially displaceable
		Shock loads, a temporary complete unloading				
		All loads	Housing not split radially	Bearing applications in general, journal boxes for rail vehicles	H6*	
			Housing split radially	Line shafting	H7	
Heat supplied through shaft	Dryer cylinders	G7

■ For cast iron or steel housings. For housings of light metal, select tolerances which give slightly tighter fits than those shown.

* Where wider tolerances are permissible P7, N7, M7, K7, J7 and H7 may be used for P6, N6, M6, K6, J6 and H6 respectively.

Series A20000S Selection Guide

A20000S single row angular contact spherical roller bearings are suitable for a wide variety of mounting arrangements. In the application of these bearings, it is important to consider that radial loads produce a thrust reaction which must be opposed by another force... usually the thrust reaction from another bearing. This force maintains the bearing rings in their correct operating position.

Normally, two single row angular contact bearings are mounted opposed to one another on a common shaft. As thrust or thrust reactions are always present, it is advisable to calculate both bearing lives concurrently.

Steps for Selection

Step 1

Determine an appropriate L10 design life.

Type of service	Operating time, hours per year	Design life, years	L10 design life, hours
Light seasonal usage	500 to 750	3-5	3,000
Heavy seasonal usage	1,400 to 1,600	4-6	8,000
Industrial—8 hour shift	2,000	10	20,000
Industrial—16 hour shift	4,000	10	40,000
Industrial—continuous	8,700	10	80,000 to 100,000
Continuous—high reliability	—	—	120,000 to 300,000

Step 2

Determine a required $\left(\frac{C}{P}\right)$ from Table 1.

Step 3

Determine a required shaft diameter and make a temporary selection for each bearing to fit this shaft.

Step 4

Calculate each induced thrust reaction TF from the radial loads Fr on each bearing.

$$TF = \frac{0.5 Fr}{Y_2}$$

This reaction is directed along the shaft and tends to separate the individual inner ring and roller assemblies from their outer rings.

The selection procedures and rating formulas shown here are in agreement with The American Bearing Manufacturers Association Standards and ANSI/ ABMA STD 11-1990. Ratings are based on fatigue life. The Rating Life L10 or fatigue life at 90% reliability is the usual basis for bearing selection.

To assure a satisfactory bearing application, fitting practice, mounting, lubrication, sealing, static rating, housing strength, operating conditions and maintenance must be considered.

Step 5

Calculate resultant bearing thrust load Fa.

$$F_a = T_f + T$$

Tf is the thrust reaction from the opposite single row angular contact bearing. The applied thrust load T is positive (+) if in the same direction as Tf, and negative (-) if in the opposite direction. If Fa is negative, substitute zero for Fa.

Step 6

Calculate the ratio of the resultant bearing thrust load Fa to the radial load Fr for each bearing.

Step 7

Calculate the equivalent radial load P for both trial bearings.

$$P = XFr + YFa$$

If $\frac{F_a}{F_r}$ is equal to or less than e, then

$$P = X_1 Fr + Y_1 Fa \quad \text{where} \quad \begin{matrix} X_1 = 1.0 \\ Y_1 = 0 \end{matrix}$$

If $\frac{F_a}{F_r}$ is greater than e, then $P = X_2 Fr + Y_2 Fa$.

For values of e, X2, and Y2, see the bearing rating table.

Step 8

Calculate the required C rating of each bearing to verify the trial selections.

required $C = \left(\frac{C}{P}\right) P$ using $\left(\frac{C}{P}\right)$ from Step 2

Consult the bearing rating table to see if the selected bearings meet or exceed the required C in each case.

Selection

Symbols for formulas:

C = basic load rating, pounds (or newtons)	n = speed, revolutions per minute
Co = static load rating, pounds (or newtons)	P = equivalent radial load, pounds (or newtons)
e = a reference value	X = radial factor
Fa = thrust load, pounds (or newtons)	Y = thrust factor
Fr = radial load, pounds (or newtons)	
L10 = rating life, hours	

Table 1 • Relation of L₁₀ life and speed to $\left(\frac{C}{P}\right)$

Basic Formula

$$\left(\frac{C}{P}\right) = \left(\frac{L_{10} \times n \times 60}{1,000,000}\right)^{3/10}$$

$$L_{10} = \frac{\left(\frac{C}{P}\right)^{10/3} \times 1,000,000}{n \times 60}$$

Life Expectancy (pair of bearings)

To calculate the Rating Life L₁₀ of any pair of selected or trial bearings:

Step 1

Calculate each induced thrust reaction T_F from the radial loads F_r on each bearing.

$$T_F = \frac{0.5 F_r}{Y_2}$$

This reaction is directed along the shaft and tends to separate the individual inner ring and roller assemblies from their outer rings.

Step 2

Calculate each resultant bearing thrust load F_a.

$$F_a = T_F + T$$

T_F is the thrust reaction from the opposite single row angular contact bearing. The applied thrust load T is positive (+) if in the same direction as T_F, and negative (-) if in the opposite direction. If F_a is negative, substitute zero for F_a.

Step 3

Calculate the ratio of the resultant bearing thrust load F_a to the radial load F_r for each bearing.

Step 4

Calculate the equivalent radial load P for both trial bearings. P = XFr + YFa

If $\frac{F_a}{F_r}$ is equal to or less than e, then
 $P = X1Fr + Y1Fa$ where

If $\frac{F_a}{F_r}$ is greater than e, then
 $P = X2Fr + Y2Fa$.

For values of e, X₂, and Y₂ see the bearing rating table.

Step 5

Calculate each ratio of the bearing basic load rating C to its equivalent radial load.

$$\left(\frac{C}{P}\right)$$

Step 6

Approximate life expectancy of each bearing from Table 1.

Life Adjustment

The Rating Life, L₁₀, may be modified for some applications in accordance with the formula

$$L_n = a_1 a_2 a_3 L_{10}$$

where L_n = Adjusted life for (100-n) % reliability,

a₁ = Life adjustment factor for reliability

a₂ = Life adjustment factor for material and processing

a₃ = Life adjustment factor for operating conditions.

For most normal applications, all factors will be taken as 1, and the Rating Life used as the selection basis or life estimate. In addition, as long as standard catalog bearings are used, a₂ will be normally set equal to one. The factor a₃ covers such things as lubrication, misalignment, and temperature.

Some conditions that could yield a₃ significantly different than unity include speeds less than 20000 DN or greater than 200000 DN, temperatures below -40°F (-40°C) or above 275°F (135°C). For other possible conditions, as well as additional information on life adjustment factors, consult Rexnord Bearing Division.

22200LB, 22200LBK

Product Features

- Cylindrical or Tapered bore
- Roller riding retainers
- Self-aligning
- High Capacity
- See Features and Benefits for additional info on page 256.

Additional Notes

Please call 1-866-REXNORD for availability

Tapered bore, 1:12 on diameter

Dimension "R" is the largest fillet radius that will clear bearing corners

For the Selection Guide Load Ratings and Speed Limits, see the Link-Belt Spherical Roller Bearings Engineering section on pages 258 - 273.

For shaft bearing seat diameters, see Link-Belt Spherical Roller Bearings Shaft & Housing Seat Diameters section on pages 266 - 269.

Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

22300LB, 22300LBK

Product Features

- Cylindrical or Tapered bore
- Roller riding retainers
- Self-aligning
- Extra high capacity
- See Features and Benefits for additional info on page 256.

Additional Notes

Please call 1-866-REXNORD for availability
 Tapered bore, 1:12 on diameter
 Dimension "R" is the largest fillet radius that will clear bearing corners
 For the Selection Guide Load Ratings and Speed Limits, see the Link-Belt Spherical Roller Bearings Engineering section on pages 258 - 273.

For shaft bearing seat diameters, see Link-Belt Spherical Roller Bearings Shaft & Housing Seat Diameters section on pages 266 - 269.

Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

23200LB, 23200LBK

Photo Shows an Unmounted Spherical Roller Bearing Unit

Product Features

- Cylindrical or Tapered bore
- Roller riding retainers
- Self-aligning
- High Capacity
- See Features and Benefits for additional info on page 256.

200 Series Standard & Intermediate Duty Ball Bearings

200 Series standard and intermediate duty ball bearing units provide a versatility of application arrangements for carrying shafts with radial or combination radial and thrust loads. They are designed for general purpose industrial machinery, conveyors, chain and belt drives, fans and blowers, power transmission and many other applications.

Collar Mounted Ball Bearings

Series CL200, U200, S200, W200, Y200 collar mounted or spring locking ball bearings, and round, square and hex bore ball bearings provide economic and versatile arrangements for supporting shafts, especially with the 2-piece formed steel flanged housings.

These product lines are designed for light industrial applications, agricultural machinery, lawn and garden equipment, recreational vehicles and other applications.

1. Inner Ring

Extended or wide inner ring for moderate or high stability and load support.

2. Choice of Locking Device

Choice of Centrik-Lok locking device, eccentric cam locking collar or spring locking or spring locking collar with set screws to lock inner ring securely to shaft.

3. Choice of Seal Type

Choice of steel-clad type H labyrinth seal, type N single lip seal or type E3 triple lip seal. W200 & S200 series have the type E single lip seal only available.

4. One-piece Housing

Compact one-piece housing provides excellent mounting support.

5. Precision Ball Bearing

Alignable precision deep groove ball bearing manufactured of quality alloy bearing steel provides high capacity and long life.

1. Precision Ball Bearing

Precision deep groove ball bearings or quality alloy bearing steel provide high capacity and long life.

2. Choice of Locking Device

Choice of Centrik-Lok locking device, eccentric cam locking collar or spring locking or spring locking collar with set screws to lock inner ring securely to shaft.

3. Optional Features

Optional features such as spherical or cylindrical O.D.'s, relubricatable or non-relubricatable.

4. Inner Ring Options

Extended or wide inner rings to meet diverse application requirements.

Wide and Extended Inner Ring Ball Bearings

Centrik-Lok CL

Precision alignable ball bearings of deep groove construction for high capacity and high precision applications. Centrik-Lok device securely locks the bearing to the shaft. This method of locking provides excellent holding power and also centers the shaft in the bearing. It eliminates shaft damage because setscrews don't contact the shaft making bearing removal easier. The C200 wide inner ring furnishes increased shaft support and accommodates wider seals for extra lubricant capacity.

Spring Locking

Precision alignable ball bearings of deep groove construction for high capacity and high precision applications. Spring locking collar or setscrew locking securely locks the bearing to the shaft. The U200 wide inner ring furnishes increased shaft support and accommodates wider seals for extra lubricant capacity.

Eccentric Cam Locking Collars

Precision alignable ball bearings of deep groove construction. Eccentric cam locking collars hold the bearings securely to the shaft and further tightens with bearing rotation. The Y200 wide inner ring provides increased shaft support and accommodates wide seals for extra lubricant capacity.

One-piece Housings

Rugged one-piece precision machined housings of many types provide a versatility of mounting arrangement and facilitate installation. All mounting surfaces are fully machined and all housings provide for easy bearing relubrication. Grease flows through the fitting into a machined grease groove and through the lubricant holes of the outer ring directly into the bearing chamber between the seals. Pillow blocks have slotted bolt holes with ample space provided for drilling dowel pin holes. Flanged units have drilled mounting holes. Take-up units have machined slots for accurate adjustment.

Steel Clad Seals

All bearing type seals are crimped tightly in the bearing outer rings with steel members and cannot be blown out during relubrication.

Type H Multi-labyrinth Seal

This seal has contoured external trash guard is an excellent all purpose low friction seal for grease lubrication.

Type N Lip Seals

These seals have the same contoured external trash guard for maximum lip protection and a full land riding lip for grease retention and dirt exclusion. These seals ride on a precision ground surface of the bearing inner ring for smooth operation and tightness.

Type E Molded Lip Seal

The type E seal has external trash guard for maximum lip protection and a full land riding lip for grease retention and dirt exclusion.

Type E3 Triple Lip Seal

This seal is a tight high torque seal for ultimate dirt exclusion. It has an external trash guard to protect the precision die molded lip members.

Type FF Flingers

This seal is for "free running" applications and/or temperatures over 400°F where contamination is not severe.

200 Series Nomenclature

Symbol	Description	PL	3	U	2	E	20	H	C	K75
F	Flanged unit, 3 and 4-bolt									
FB	Flanged bracket unit, 3-bolt									
FF	Flanged screw conveyor unit, 4-bolt									
FC	Flanged cartridge unit, 4-bolt round									
FX	Flanged unit, 2-bolt									
FR	Flanged unit, 3 and 4-bolt inboard mounting									
FXR	Flanged unit, 2-bolt inboard mounting									
HM	Hanger screw conveyor unit									
P	Pillow block, standard backing									
PH	Pillow block, high backing									
PL	Pillow block, low backing									
PS	Pillow block, formed steel housing									
PT	Pillow block, tapped base									
T	Take-up, standard slot									
TH	Take-up, wide slot									
TAS	Conveyor take-up, formed steel frame									
TDS	Conveyor take-up, hinged top, welded steel frame									
NT	Conveyor take-up, welded channel frame									
3	Integral bearing seals									
CL	Wide inner ring, Centrik-Lok collar									
S	Narrow inner ring, spring locking									
U	Wide inner ring, spring locking									
Y	Wide inner ring, eccentric cam locking collar									
W	Narrow inner ring, eccentric cam locking collar									
None	Non-relubricatable bearing									
G	Relubricatable bearing									
2	200 Series ball bearing designation									
B	Inner ring bore equal to a bore of preceding smaller bearing group									
E	Inner ring bore equal to a bore of following larger bearing group									
20	Shaft size in sixteenths of an inch									
M30	Shaft size, metric series in millimeters									
J	Steel retainers									
E3	Triple lip seals									
E	Molded single lip seals									
FF	Flingers only, 50% grease fill									
HFF	Flingers only, 10% oil fill									
MHFF	Flingers only, 10% grease fill									
H	Floating labyrinth seals									
N	Single lip seals									
C	Closed end unit									
K75	Nickel plated housing									
18	Take-up adjustment, inches									
K4	100% Grease Filled									
K5	No Grease - Preservative only									
K6	100% Grease filled and housing plugged									
K13	Housing Plugged									
K75	Nickel Plated Housing									
K82	Black oxide coated rings									
18A	SHC100 Grease									
18W	SHC460 Grease									
18Y	SHC220 Grease									
4C	molykote 44 Grease									
99A	Food Grade Grease									
2, 3, 4, 5	Clearances other than standard									

200 Series Collar Unmounted Ball Bearings Nomenclature

Symbol	Description	U	B	G	2	E	20	H	L
CL	Wide Inner Ring, Centrik-Lok Collar								
ER	Adapter series, cylindrical O.D. with lube groove and O.D. locating ring								
MSL	Ball bearing, cylindrical O.D., wide inner ring, spring locking								
MSLN	Ball bearing, cylindrical O.D., narrow inner ring, spring locking								
RER	Rubber cartridge unit (used in FPSR2 units)								
S	Extended inner ring, spring locking								
U	Wide inner ring, spring locking								
Y	Wide inner ring, eccentric cam locking collar								
W	Extended inner ring, eccentric cam locking collar								
None	O.D. of outer ring is spherical								
B	O.D. of outer ring is cylindrical								
None	Non-relubricatable bearing								
G	Relubricatable bearing								
2	200 Series ball bearing designation								
B	Inner ring bore equal to a bore of preceding smaller bearing group								
E	Inner ring bore equal to a bore of following larger bearing group								
20	Shaft size in sixteenths of an inch								
M30	Shaft size, metric series in millimeters								
E3	Triple lip seals								
E	Molded single lip seals								
H	Floating labyrinth seals								
N	Single lip seals								
L1	Bearing without collar								
L	Bearing with collar & setscrews								

Hex, Round and Square Bore Ball Bearings Nomenclature

Symbol	Description	31	R	B	G	3	-	2	10	J	E3
None	Bore is basic metric size										
31	Shaft size in sixteenths of an inch										
R	Bearing bore is round										
S	Bearing bore is square										
K	Bearing bore is hex										
None	O.D. of outer ring is spherical										
B	O.D. of outer ring is cylindrical										
None	Non-relubricatable										
G	Relubricatable (two holes in outer ring @ 180°)										
None	Metric width outer ring; basic inch width inner ring										
2	Basic inch width outer ring; intermediate inch width inner ring										
3	Basic inch width outer ring; basic inch width inner ring										
4	Basic inch width outer ring; unground spherical O.D. with flat ground cylindrical center; intermediate inch width inner ring										
5	Metric width outer ring; intermediate inch width inner ring										
6	Basic inch width outer ring; wide inch width inner ring										
7	Wide metric width outer ring; intermediate inch width inner ring										
8	Wide metric width outer ring; wide inch width inner ring										
2	Series 200 ball bearing designation										
E	Bore is .031 inch oversize										
10	One fifth of basic mm bore size										
None	Non-metallic retainer										
J	Formed steel retainer, two-piece										
N	Single lip seals										
E3	Triple lip seals										

Seal Selection Guide

The choice of the seal for a mounted bearing is often the key to successful bearing operation and long service life. The Seal Selection Guide incorporates years of experience against the wide variety of conditions encountered on actual applications. Following the simple selection procedure outlined can translate the benefits of that broad experience to the individual applications through the choice of the most effective seal.

How to Use the Selection Guide

- The appropriate seal for a given application may be selected by comparing the job application conditions against those listed in the Seal Rating Guide on this page.
- When more than one application condition is present, the most appropriate seal may be selected based on prime sealing for the most detrimental condition, and secondary consideration given to the other application conditions.
- If further evaluation of the seals must be made, then refer to the General Design and Characteristic Guide
- Addition of auxiliary caps will enhance the primary seal performance shown in the chart.

Considerations in Addition to Seal Selection

Under certain adverse conditions, other changes should be considered to achieve maximum bearing life:

- High temperature lubricants where housing or ambient temperatures exceed +200°F.
- Special greases for additional bearing protection where excessive water, solvents or chemicals are present.
- EP (extreme pressure) greases where high load, high shock load, or continuous vibration is present.
- Readjustment of internal operating clearance of bearing where extreme high or low temperature conditions exist.

Seal Rating Guide

Application Conditions	Seal Ratings			
	Clearance H	Single Lip E	Single Lip N	Triple Lip E3
Shaft Position

Alkaline Fumes and Liquids	1	1	1	1

Rating Code

- 4 - Excellent - Best seal for conditions listed.
 3 - Good - Sealability is above average.
 2 - Fair - Seal performs under intermittent conditions.
 1 - Limited - Actual conditions must be known to evaluate sealability. Check "General Characteristic Guide" for construction as well as benefits and limitations for further evaluation.
 0 - Not acceptable - Will not effectively perform seal functions. Contact Rexnord for special assistance in the realm of materials and designs.

Caps ending in "6N" are polypropylene material, all others are steel.

Caps not available in housing styles not listed.

200 Series Ball Bearings Selection Guide

To select a bearing, determine the applied radial load, the applied thrust load, the desired Rating Life, and applicable operating conditions. The procedure shown here will aid in selecting a bearing to meet an L_{10} design life. The formulas for calculating life expectancy should be used to determine the Rating Life L_{10} for the bearing selected.

The selection procedures and rating formulas shown here are in agreement with The American Bearing Manufacturers Association Standards and ANSI/ABMA Standards STD 9-1990. Ratings are based on fatigue life. The Rating Life or fatigue life at 90% reliability is the usual basis for bearing selection.

Steps for Selection

Step 1

Determine an appropriate L_{10} design life.

Type of service	Operating time, hours per year	Design life, years	L_{10} design life, hours
Light seasonal usage	500 to 750	3-5	3,000
Heavy seasonal usage	1,400 to 1,600	4-6	8,000
Industrial—8 hour shift	2,000	10	20,000

Step 2

Determine a required $\left(\frac{C}{P}\right)$ from Table 1.

Step 3

Calculate the required C and select a ball bearing.

a For radial load only:

$$P = F_r$$

$$\text{required } C = \left(\frac{C}{P}\right)P \text{ using } \left(\frac{C}{P}\right) \text{ from Step 2}$$

Select a ball bearing from Table 3 with a basic load rating C equal to or greater than the required C.

b For combined radial and thrust loads when $\frac{F_a}{F_r}$ is 0.19 or less:

$$P = F_r$$

$$\text{required } C = \left(\frac{C}{P}\right)P \text{ using } \left(\frac{C}{P}\right) \text{ from Step 2}$$

Select a ball bearing from Table 3 with a basic load rating C equal to or greater than the required C.

Series C200, U200, Y200, and hex, square and round bore bearings have wide inner rings for load support; however, the S200 and W200 series are extended on one side only for compactness and low cost. In combination with its companion line of economically designed housings, this series is applicable to light or moderate duty requirements. Where non-relubricatable bearings are used, bearing life is often limited by grease life, which is in turn affected by operating conditions. Also, economically designed housings must be applied within proportionate load limits. To assure a satisfactory bearing application, fitting practice, mounting, lubrication, sealing, static rating, housing strength, operating conditions and maintenance must be considered.

Step 3 (continued)

c For combined radial and thrust loads when $\frac{F_a}{F_r}$ is greater than 0.19, use the following trial method:

$$\text{Maximum } P = .56F_r + 2.30F_a$$

$$\text{Maximum required } C = \left(\frac{C}{P}\right)P \text{ using } \left(\frac{C}{P}\right) \text{ from Step 2}$$

Select a trial ball bearing with a basic load rating C from Table 3 approximately equal to the maximum required C.

$$\text{With this trial bearing calculate: } \frac{F_a}{Nd^2}$$

Determine X and Y from Table 2.

Calculate P for the trial bearing.

$$P = XF_r + YF_a$$

$$\text{required } C = \left(\frac{C}{P}\right)P \text{ for the trial bearing using } \left(\frac{C}{P}\right) \text{ from Step 2}$$

Consult Table 3, basic load rating. If a smaller bearing meets or nearly meets the required C, its life expectancy can be calculated. Note: If the load P is greater than .25C for series C200, U200, Y200, hex, square, and round bore bearings or greater than .15C for series S200 and W200, consult Rexnord Bearing Products.

Selection

Symbols for formulas:

C = basic load rating, pounds (or newtons)

C₀ = static load rating, pounds (or newtons)

e = a reference value

F_a = thrust load, pounds (or newtons)

F_r = radial load, pounds (or newtons)

L₁₀ = rating life, hours

n = speed, revolutions per minute

P = equivalent radial load, pounds (or newtons)

X = radial factor

Y = thrust factor

Table 1 • Relation of L₁₀ life and speed to $\left(\frac{C}{P}\right)$

Basic formula

$$\left(\frac{C}{P}\right) = \left(\frac{L_{10} \times n \times 60}{1,000,000}\right)^{1/3}$$

$$L_{10} = \frac{\left(\frac{C}{P}\right)^3 \times 1,000,000}{n \times 60}$$

Life Expectancy

To calculate the Rating Life L₁₀ of any selected or trial bearing:

Step 1 Determine the equivalent radial load P.

a For radial load only:
P = F_r

b For combined radial and thrust load:
P = X F_r + Y F_a using X and Y from Table 2 below.

Step 2 Calculate the ratio of basic load rating C to the equivalent radial load.

$$\left(\frac{C}{P}\right)$$

Step 3 Approximate the bearing life from Table 1.

Table 2 • X and Y factors for ball bearings

F _a Nd ²	e	F _a F _r ≤ e		F _a F _r > e	
		X	Y	X	Y
25	.19	1.0	0	.56	2.30
37.5	.21	1.0	0	.56	2.15
50	.22	1.0	0	.56	1.99
75	.24	1.0	0	.56	1.85
100	.26	1.0	0	.56	1.71
125	.27	1.0	0	.56	1.63
150	.28	1.0	0	.56	1.56
200	.30	1.0	0	.56	1.45
300	.34	1.0	0	.56	1.31
500	.38	1.0	0	.56	1.15
750	.42	1.0	0	.56	1.04
1000	.44	1.0	0	.56	1.00

For values between those in the table linear interpolation can be used.

Life Adjustment

The Rating Life, L₁₀, may be modified for some applications in accordance with the formula

$$L'_n = a_1 a_2 a_3 L_{10}$$

where L'_n = Adjusted life for (100-n) % reliability,

a₁ = Life adjustment factor for reliability

a₂ = Life adjustment factor for material and processing

a₃ = Life adjustment factor for operating conditions.

For most normal applications, all factors will be taken as 1, and the Rating Life used as the selection basis or life estimate. In addition, as long as standard catalog bearings are used, a₂ will be normally set equal to one. The factor a₃ covers such things as lubrication, misalignment, and temperature. Some conditions that could yield a₃ significantly different than unity include speeds less than 20000 DN or greater than 200000 DN, temperatures below -40°F (-40°C) or above 275°F (135°C). For other possible conditions, as well as additional information on life adjustment factors, consult Rexnord Bearing Products.

Table 3 • Load Ratings, Speed Limits and Ball Data

If the load P is greater than 15% of the C rating for S200 and W200 or 25% of the C rating for all others, consult Rexnord Bearing Division.

For U200, Y200, S200 and W200 Series reduce C Basic Load Rating by 23%

For CL200 Series reduce C Basic Load Rating by 15%.

* Based on grease lubrication and moderate load.

‡ E seal operation at higher speeds up to H seal speed limit is allowable providing the lip seal friction does not result in operating temperatures over 225°F (107°C).

Table 4 • Radial load ratings in pounds at various RPM for appropriate L₁₀ life hours

If the load P is greater than 15% of the C rating for S200 and W200 or 25% of the C rating for all others, consult Rexnord Bearing Division.

For U200, Y200, S200 and W200 Series reduce C Basic Load Rating by 23%.

For CL200 Series reduce C Basic Load Rating by 15%.

Operation in the high speed shaded areas requires frequent lubrication.

Housing Bearing Seat Diameters For Cylindrical O.D. Ball Bearings

Class of fit selection

Housing Construction	Operating Condition		Class of fit*	Remarks
Housing not split radially	Housing rotating in relation to direction of load	Normal and heavy loads	N6	Outer ring not axially displaceable
		Light loads	M6	
	Direction of load indeterminate	Heavy shock loads	K6	Outer ring, as a rule, not axially displaceable
		Normal and heavy loads where outer ring does not have to be axially displaceable		
Housing split or not split radially	Housing stationary in relation to direction of loads	Normal and light loads where displaceability of outer ring is desirable	J6	Outer ring, as a rule, axially displaceable
		Shock loads temporary complete unloading	H6	
	All loads	Housing not split radially		H7
		Housing split radially		

*For cast iron or steel housings. For housings of light metal, select tolerances which give slightly tighter fits than those shown.

Please consult for availability.

1μm = .001 mm

The appropriate housing bore for any class of fit can be easily determined by applying the housing tolerance to the nominal housing bore.

Example, (using basic size 211 and class of fit H7):

		inches		mm	
Nominal housing bore	=	1.5748	1.5748	40.000	40.000
Housing bore tolerance	=	-.0000	+.0010	-0.000	+0.025
Resultant housing bore	=	1.5748	1.5758	40.000	40.025

▲ Symbol L indicates a loose or clearance fit. Symbol T indicates a tight or interference fit.

△ The arithmetical mean of the largest and smallest single diameter to be within tolerance shown. Allowable deviations from mean diameter per ANSI/ABMA Standard 20, latest printing.

P3CL200N

Interchange: P2BDL, GRP200, NP-T

Product Features

- Corrosion resistant powder coating
- Cast iron housing
- Broad range of sealing options
- Wide inner ring for increased shaft stability
- Centrik-Lok CL shaft locking device
- Alignable and relubricatable
- Black Oxide
- See Features and Benefits for additional info on pages 286 - 287.

Additional Notes

Please call 1-866-REXNORD for availability
 Lubrication fitting tap size: for size code 203, 1/4 in-28 UNF; for all other size codes, 1/8 in PT
 Base to centerline tolerance, +0.000 in/-0.010 in (+0.00 mm/-0.25 mm)
 * N lip seals standard
 ■ Available with H labyrinth seals

Δ Available with E3 triple lip seals
 Nickel plated housings available through all size codes, add suffix K75
 For the Selection Guide, Load Ratings and Speed Limits, see the Link-Belt 200 Series Ball Bearing Engineering section on pages 290 - 298.
 Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

P3Y200

Interchange: P2BSXR, SY-WF, HCP200, RAS

Photo Shows a 2-Bolt Ball Bearing Pillow Block Unit

Product Features

- Corrosion-resistant powder coating
- Cast iron housing
- Broad range of sealing options
- Wide inner ring for increased shaft stability
- Eccentric cam locking device
- Alignable & relubricatable
- See Features and Benefits for additional info on pages 286 - 287.

Additional Notes

Please call 1-866-REXNORD for availability
 Lubrication fitting tap size: for size code 203, 1/4 in-28 UNF; for all other size codes, 1/8 in PT
 Base to centerline tolerance, +.000 in/- .010 in (+0.00 mm/-0.25 mm)
 Size codes 203 to 212 don't have mounting collars
 * N lip seals standard
 ■ Available with H labyrinth seals

Δ Available with E3 triple lip seals
 Nickel plated housings available in all size codes
 For the Selection Guide, Load Ratings and Speed Limits, see the Link-Belt 200 Series Ball Bearing Engineering section on pages 290 - 298.
 Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

Additional Notes

- Please call 1-866-REXNORD for availability
- Lubrication fitting tap size: for size codes 203 thru 205, 1/4-28 UNF: for all other size codes, 1/8 in PT
- Base to centerline tolerance, +/- .005 in (+/- 0.13 mm)
- Lip seals standard
- ♦ Available with E1 viton seals for all size codes

- ♦ Nickel plated housings available, add suffix K75
- Available with free running style seals, add suffix ♦ FF, □ HFF or Δ MHFF for all size codes
- For the Selection Guide, Load Ratings and Speed Limits, see the Link-Belt 200 Series Ball Bearing Engineering section on pages 290 - 298.
- Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

PH3Y200

Interchange: P2BSXRU

Photo Shows a 2-Bolt Ball Bearing Pillow Block Unit

Product Features

- Corrosion-resistant powder coating
- Cast iron housing
- Broad range of sealing options
- Wide inner ring for increased shaft stability
- Eccentric cam locking device
- Alignable & relubricatable
- High base to center height
- See Features and Benefits for additional info on pages 286 - 287.

Additional Notes

Please call 1-866-REXNORD for availability
 Lubrication fitting tap size: for size code 203, 1/4 in-28 UNF: for all other size codes, 1/8 in PT

* N lip seals standard

■ Available with H labyrinth seals

Δ Available with E3 triple lip seals

Nickel plated housings available, add suffix K75

For the Selection Guide, Load Ratings and Speed Limits, see the Link-Belt 200 Series Ball Bearing Engineering section on pages 290 - 298.

Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

F3U200

Interchange: F4BSC, FY-TF, UCF200, SF, YCJ

Photo Shows a 4-Bolt Ball Bearing Flanged Unit

Product Features

- Corrosion-resistant powder coating
- Cast iron housing
- Broad range of sealing options
- Wide inner ring for increased shaft stability
- Spring locking setscrew mount
- Alignable & relubricatable
- See Features and Benefits for additional info on pages 286 - 287.

Additional Notes

- Please call 1-866-REXNORD for availability
- Lubrication fitting tap size, 1/4 in-28 UNF
- * N lip seals standard
- Available with H labyrinth seals
- Δ Available with E3 triple lip seals
- Nickel plated housings available, add suffix K75

For the Selection Guide, Load Ratings and Speed Limits, see the Link-Belt 200 Series Ball Bearing Engineering section on pages 290 - 298.

Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

FB3S200

Interchange: *FBVSC*

Photo Shows a 3-Bolt Ball Bearing Flanged Bracket Unit

Product Features

- Corrosion-resistant powder coating
- Cast iron housing
- Broad range of sealing options
- Spring locking setscrew mount
- Alignable & relubricatable
- See Features and Benefits for additional info on pages 286 - 287.

Additional Notes

Please call 1-866-REXNORD for availability
 Lubrication fitting tap size: for size codes 206 and below, 1/4 in-28 UNF; for all other size codes, 1/8 in PT
 Pilot Diameter tolerance, +.000 in/-.002 in (**+0.00 mm/-0.05 mm**)
 Bore tolerance for mounting, +.002 in/-.000 in (**+0.05 mm/-0.00 mm**)
 Size codes 203 to 212 don't have mounting collars
 * N lip seals standard

■ Available with H labyrinth seals
 Δ Available with E3 triple lip seals
 For the Selection Guide, Load Ratings and Speed Limits, see the Link-Belt 200 Series Ball Bearing Engineering section on pages 290 - 298.
 Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

FC3S200

Interchange: FCVSC

Photo Shows a 4-Bolt Ball Bearing Flanged Cartridge Unit

Product Features

- Corrosion-resistant powder coating
- Cast iron housing
- Broad range of sealing options
- Spring locking setscrew mount
- Alignable & relubricatable
- See Features and Benefits for additional info on pages 286 - 287.

FXYG200, FXYG200

Photo Shows a 2-Bolt Ball Bearing Flanged Unit with High Test Iron Housing

Product Features

- Corrosion-resistant powder coating
- High test iron housing
- Broad range of sealing options
- Wide inner ring for increased shaft stability
- Eccentric cam locking device
- Alignable & optional relubrication feature
- 2-bolt carriage outboard mounting
- See Features and Benefits for additional info on pages 286 - 287.

- Short shank square neck carriage bolt is not recommended
- * N lip seals standard
- Available with H labyrinth seals

Δ Available with E3 triple lip seals

For the Selection Guide, Load Ratings and Speed Limits, see the Link-Belt 200 Series Ball Bearing Engineering section on pages 290 - 298.

Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

FXRW200, FXRWG200

Photo Shows a 2-Bolt Ball Bearing Flanged Unit with High Test Iron Housing

Product Features

- Corrosion-resistant powder coating
- High test iron housing
- Eccentric cam locking device
- Alignable & optional relubrication feature
- 2-bolt carriage inboard mounting
- See Features and Benefits for additional info on pages 286 - 287.

Additional Notes

- Please call 1-866-REXNORD for availability
- Lubrication fitting tap size: for size codes 204 and below, 10-32 UNF: for all other size codes, 1/4 in-28 UNF
- Short shank square neck carriage bolt is not recommended
- ▲ E lip seals standard

For the Selection Guide, Load Ratings and Speed Limits, see the Link-Belt 200 Series Ball Bearing Engineering section on pages 290 - 298.
 Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

FY200, FYG200

Photo Shows a 3-Bolt Ball Bearing Flanged Unit with High Test Iron Housing

Product Features

- Corrosion-resistant powder coating
- High test iron housing
- Broad range of sealing options
- Wide inner ring for increased shaft stability
- Eccentric cam locking device
- Alignable & optional relubrication feature
- 3 or 4-bolt carriage outboard mounting
- See Features and Benefits for additional info on pages 286 - 287.

Additional Notes

- Please call 1-866-REXNORD for availability
- Lubrication fitting tap size: for size codes 204 and below, 10-32 UNF; for all other size codes, 1/4 in-28 UNF
- Short shank square neck carriage bolt is not recommended
- * N lip seals standard
- Available with H labyrinth seals

Δ Available with E3 triple lip seals

For the Selection Guide, Load Ratings and Speed Limits, see the Link-Belt 200 Series Ball Bearing Engineering section on pages 290 - 298.

Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

FRW200, FRWG200

Photo Shows a 3-Bolt Ball Bearing Flanged Unit with High Test Iron Housing

Product Features

- Corrosion-resistant powder coating
- High test iron housing
- Eccentric cam locking device
- Alignable & optional relubrication feature
- 3 or 4-bolt carriage inboard mounting
- See Features and Benefits for additional info on pages 286 - 287.

Additional Notes

- Please call 1-866-REXNORD for availability
- Lubrication fitting tap size: for size code 203, 1/4 in-28 UNF; for all other size codes, 1/8 in PT
- * N lip seals standard
- Available with H labyrinth seals
- Δ Available with E3 triple lip seals

For the Selection Guide, Load Ratings and Speed Limits, see the Link-Belt 200 Series Ball Bearing Engineering section on pages 290 - 298.
 Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

TH3CL200

Interchange: WSTUDL, GRT200, ST-T

Product Features

- Corrosion-resistant powder coating
- Cast iron housing
- Wide slot design
- Broad range of sealing options
- Wide inner ring for increased shaft stability
- Alignable & relubricatable
- See Features and Benefits for additional info on pages 286 - 287.

Additional Notes

- Please call 1-866-REXNORD for availability
- Lubrication fitting tap size, 1/8 in PT
- Lip seals standard
- ♦ Available with E1 viton seals for all size codes
- Available with free running style seals, add suffix ♦ FF, □ HFF or Δ MHFF for all size codes

For the Selection Guide, Load Ratings and Speed Limits, see the Link-Belt 200 Series Ball Bearing Engineering section on pages 290 - 298.
 Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

CHBS200

Interchange: SCHB, UCHA200

Photo Shows a Screw Conveyor Hanger Ball Bearing Unit

Product Features

- Corrosion-resistant powder coating
- Cast iron housing
- Broad range of sealing options
- Spring locking setscrew mount
- Alignable & relubricatable
- See Features and Benefits for additional info on pages 286 - 287.

Additional Notes

- Please call 1-866-REXNORD for availability
- Lubrication fitting tap size, 1/8 in PT
- Closed end take-ups available, add suffix C
- On closed end take-up, bearing assembly is reversed
- Frames with 6 in (152.40 mm) adjustment have six holes
- Frames with 9 in (228.60 mm) or 12 in (304.80 mm) adjustment have eight holes
- Frames with 18 in (457.20 mm) adjustment have ten holes

* N lip seals standard

- Available with H labyrinth seals
- Δ Available with E3 triple lip seals

For the Selection Guide, Load Ratings and Speed Limits, see the Link-Belt 200 Series Ball Bearing Engineering section on pages 290 - 298.

Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

TDS3U200

Photo Shows a Hinged Top, Welded Steel Conveyor Take-up Frame with Ball Bearing Take-up Unit

Product Features

- Protected screw type steel frame
- Corrosion-resistant powder coating
- Cast iron housing
- Broad range of sealing options
- Wide inner ring for increased shaft stability
- Spring locking setscrew mount
- Alignable & relubricatable
- TD3U200 take-up unit
- See Features and Benefits for additional info on pages 286 - 287.

Additional Notes

Please call 1-866-REXNORD for availability
 Lubrication fitting tap size, 1/8 in PT
 Closed end take-ups available, add suffix C
 Size code 220 has hinged top construction
 Frames with 18 in (457.20 mm) adjustment or more have center supporting pad welded to bottom of frame
 * N lip seals standard

■ Available with H labyrinth seals
 Δ Available with E3 triple lip seals
 For the Selection Guide, Load Ratings and Speed Limits, see the Link-Belt 200 Series Ball Bearing Engineering section on pages 290 - 298.
 Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

NT3U200

Photo Shows a Welded Channel Conveyor Take-up Frame with Ball Bearing Take-up Unit

Product Features

- Protected screw welded channel frame
- Corrosion-resistant powder coating
- Cast iron housing
- Broad range of sealing options
- Wide inner ring for increased shaft stability
- Spring locking setscrew mount
- Alignable & relubricatable
- See Features and Benefits for additional info on pages 286 - 287.

Additional Notes

- Please call 1-866-REXNORD for availability
- Lubrication fitting tap size: for size codes 212 and below, 1/4 in PT; for all other size codes, 3/8 in PT
- Support thrust load (preferably in shear) with heavy duty snap ring and square face washer
- Includes two bearings with seals and inner ring setscrews or collar with setscrews

* N lip seals standard
 For the Selection Guide, Load Ratings and Speed Limits, see the Link-Belt 200 Series Ball Bearing Engineering section on pages 290 - 298.
 Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

CLG200NL

Photo Shows an Unmounted Ball Bearing Unit

Product Features

- Broad range of sealing options
- Wide inner ring for increased shaft stability
- Spring locking setscrew mount
- Sealed & relubricatable
- Spherical O.D.
- See Features and Benefits for additional info on pages 286 - 287.

Additional Notes

- Please call 1-866-REXNORD for availability
- Dimension "r", max fillet radius of housing to clear bearing corner
- Bearing O.D. tolerance for size code 208 and below, +.0000 in/-0.0005 in (+0.000 mm/-0.013 mm); for all other size codes, +.0000 in/-0.0006 in (+0.000 mm/-0.015 mm)
- * N lip seals standard
- Available with H labyrinth seals

- Δ Available with E3 triple lip seals
- For the Selection Guide, Load Ratings and Speed Limits, see the Link-Belt 200 Series Ball Bearing Engineering section on pages 290 - 298.
- Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

UG200, UBG200

Photo Shows an Unmounted Ball Bearing Unit

Product Features

- Broad range of sealing options
- Wide inner ring for increased shaft stability
- Spring locking setscrew mount
- Sealed & relubricatable
- Spherical or Cylindrical O.D.
- See Features and Benefits for additional info on pages 286 - 287.

Additional Notes

- Please call 1-866-REXNORD for availability
- Bearing O.D. tolerance for size code 203 thru 208, +.0000 in/-.0005 in (+0.000 mm/-0.013 mm); for all other size codes, +.0000 in/-.0006 in (+0.000 mm/-0.015 mm)
- Lip seals standard
- ◆ Available with E1 viton seals for all size codes
- Available with free running style seals, add suffix ● FF, □ HFF or △ MHFF for all size codes

For the Selection Guide, Load Ratings and Speed Limits, see the Link-Belt 200 Series Ball Bearing Engineering section on pages 290 - 298.
 Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

ER-KCL

Photo Shows an ER Adapter Series Ball Bearing Unit

Product Features

- Broad range of sealing options
- Centrik-Lok shaft locking device
- Sealed & relubricatable
- Cylindrical O.D.
- O.D. mounted snap ring
- See Features and Benefits for additional info on pages 286 - 287.

Medium Duty Ball Bearings Designed for Long Life and Precision Performance

200 Series Medium Duty Ball Bearings provide design and performance features developed by decades of experience in supplying precision ball bearing inserts for other major mounted bearing manufacturers and complete mounted units to machinery and equipment manufacturers. They are priced competitively to bearings of comparable construction and design. In addition to sound basic design and construction, special features minimize the three most common

causes of premature bearing failure... loosening of bearings on rotating shafts, entrance of contaminants or loss of lubricant due to seal failure and insufficient housing strength. Medium duty foot-mounted pillow blocks, flange units, take-up blocks and hanger bearings cataloged in the following pages are available from stock. For other sizes, mountings or special requirements to fit your applications, please consult the Rexnord Bearing Products.

Spring Locking

Precision alignable ball bearing of deep groove construction for high capacity and high precision applications. Spring locking collars of setscrew locking security, locks bearing to the shaft.

Centrik-Lok CL Shaft Locking Device

The Centrik-Lok method of fastening the bearing inner race to the shaft provides substantial improvement in holding power compared to spring locking collars. The unique 2-piece collar and 8-tab design offers the best shaft holding force in the industry.

Combination Seal-Flinger System

Optimum protection from loss of lubricant and entrance of dirt and contaminants is achieved with positive lip-type contact seals. The resulting longer seal life extends bearing life significantly.

Rugged, One-Piece Cast Iron Housing

Housings are designed to withstand bearing load ratings, external vibration and shock. Foot mounted pillow block bolt holes are elongated for easy installation and adjustment.

Spherically-Seated Bearing Insert with Anti-Rotation Device

The spherical fit between the outer race O.D. and I.D. of the block is precisely controlled for easy shaft alignment. The anti-rotation device is permanently installed in the bearing insert O.D. It engages one of the housing insertion slots, preventing outer race creep and wear of housing. There is no danger of losing a separable pin during field replacement of bearings and no danger of preloading the bearing as is possible in other designs where a lube fitting is tightened against a locking pin.

Precision Mounted Ball Bearings with Shaft Locking Device

Centrik-Lok precision mounted ball bearings feature a concentric shaft locking device, resulting in a great improvement in the holding power (locking efficiency). Field experience shows substantial improvement in holding power when compared to eccentric locking collars and even greater improvement in locking efficiency when compared to 120° setscrew positioning and other types of locking arrangements.

Standard sealing arrangements

Standard steel clad Type N single lip seals have a useful temperature range of -40°F to +225°F and can withstand temperatures of 250°F for intermittent service. Special sealing arrangements are available for higher temperatures and “free-running” or special contamination resistance.

STANDARD MEDIUM DUTY SEAL

Special optional sealing arrangements

Suffix-MHFF indicates flingers both sides. This provides a sealed, “free-running” bearing with heat shield protection. It is satisfactory for temperatures from -40°F to +225°F. Rexnord Bearing Products must be consulted regarding availability of any of these optional sealing configurations.

Examples for ordering:

1. Mounted Unit MPS219MHFF
2. Bearing Insert MSG219MHFFLPA

-MHFF

High temperature ball bearing inserts and housed units

Mounted ball bearings and inserts are available for high temperature applications up to 400°F. The “E1” package provides the following features.

1. Extra Internal Diameters Clearance (DC), based on a 200°F temperature differential between inner and outer races, compensates for the inner race expanding at a faster rate than the outer race and will avoid preloading of the bearings.
2. Steel Retainer (Cage) – 2 piece riveted construction.
3. High Temperature Lubrication – prelubricated with a No.2 consistency bentone-base grease with petroleum oil. When operated near upper limit, (400°F to 450°F) daily relubrication is required.
4. Viton Seals withstand temperatures to 400°F.

Examples for ordering:

1. Mounted Unit MPS219E1
2. Bearing Insert MSG219E1LPA

-E1

Free running applications and applications above 400°F

Sealing options such as -FF (flingers only) for “free running” applications and/or temperatures over 400°F where contamination is not severe. The flinger acts as a labyrinth seal. High temperature bearings require a greater amount of diametral clearance (DC) and a higher temperature lubricant. Consult Rexnord Bearing Products for recommendations.

Examples for ordering:

1. Mounted Unit MPS219FF
2. Bearing Insert MSG219FFLPA

-FF

L	Bearing with collar & setscrews	_____	_____	_____	_____	_____	_____	_____	_____
PA	Suffix designation for unmounted replacement bearing insert	_____	_____	_____	_____	_____	_____	_____	_____

200 Series Medium Duty Ball Bearings Selection Guide

To select a bearing, determine the applied radial load, the applied thrust load, the desired Rating Life, and applicable operating conditions. The procedure shown here will aid in selecting a bearing to meet an L₁₀ design life. The formulas for calculating life expectancy should be used to determine the Rating Life L₁₀ for the bearing selected.

The selection procedures and rating formulas shown here are in agreement with The American Bearing Manufacturers Association Standards and ANSI/ABMA Standards STD 9-1990. Ratings are based on fatigue life. The Rating Life or fatigue life at 90% reliability is the usual basis for bearing selection.

Medium duty bearings have extended inner rings on one side only for compactness and low cost. These series are applicable to light or moderate duty requirements.

Where non-relubricatable bearings are used, bearing life is often limited by grease life, which is in turn affected by operating conditions. Also, economically designed housings must be applied within proportionate load limits. To assure a satisfactory bearing application, fitting practice, mounting, lubrication, sealing, static rating, housing strength, operating conditions and maintenance must be considered.

Steps for Selection

Step 1

Determine an appropriate L₁₀ design life.

Type of service	Operating time, hours per year	Design life, years	L ₁₀ design life, hours
Light seasonal usage	500 to 750	3-5	3,000
Heavy seasonal usage	1,400 to 1,600	4-6	8,000
Industrial—8 hour shift	2,000	10	20,000

Step 2

Determine a required $\left(\frac{C}{P}\right)$ from Table 1.

Step 3

Calculate the required C and select a ball bearing.

a For radial load only:

$$P = F_r$$

$$\text{required } C = \left(\frac{C}{P}\right) P \text{ using } \left(\frac{C}{P}\right) \text{ from Step 2}$$

Select a ball bearing from Table 3 with a basic load rating C equal to or greater than the required C.

b For combined radial and thrust loads when $\frac{F_a}{F_r}$ is 0.19 or less:

$$P = F_r$$

$$\text{required } C = \left(\frac{C}{P}\right) P \text{ using } \left(\frac{C}{P}\right) \text{ from Step 2}$$

Select a ball bearing from Table 3 with a basic load rating C equal to or greater than the required C.

Step 3 (continued)

c For combined radial and thrust loads when $\frac{F_a}{F_r}$ is greater than 0.19, use the following trial method:

$$\text{Maximum } P = .56F_r + 2.30F_a$$

$$\text{Maximum required } C = \left(\frac{C}{P}\right) P \text{ using } \left(\frac{C}{P}\right) \text{ from Step 2}$$

Select a trial ball bearing with a basic load rating C from Table 3 approximately equal to the maximum required C.

With this trial bearing calculate: $\frac{F_a}{Nd^2}$

Determine X and Y from Table 2.

Calculate P for the trial bearing.

$$P = XF_r + YF_a$$

$$\text{required } C = \left(\frac{C}{P}\right) P \text{ for the trial bearing using } \left(\frac{C}{P}\right) \text{ from Step 2}$$

Consult Table 3, basic load rating. If a smaller bearing meets or nearly meets the required C, its life expectancy can be calculated.

Note: If the load P is greater than .15C for series 25 and 35 consult Rexnord Bearing Products.

Selection

Symbols for formulas:

C = basic load rating, pounds (or newtons)	n = speed, revolutions per minute
C ₀ = static load rating, pounds (or newtons)	P = equivalent radial load, pounds (or newtons)
e = a reference value	X = radial factor
F _a = thrust load, pounds (or newtons)	Y = thrust factor
F _r = radial load, pounds (or newtons)	
L ₁₀ = rating life, hours	

Basic formula

$$\left(\frac{C}{P}\right) = \left(\frac{L_{10} \times n \times 60}{1,000,000}\right)^{1/3}$$

$$L_{10} = \frac{\left(\frac{C}{P}\right)^3 \times 1,000,000}{n \times 60}$$

Life Expectancy

To calculate the Rating Life L₁₀ of any selected or trial bearing:

Step 1

Determine the equivalent radial load P.

a For radial load only:
P = F_r

b For combined radial and thrust load:
P = X F_r + Y F_a using X and Y from Table 2 below.

Step 2

Calculate the ratio of basic load rating C to the equivalent radial load.

$$\left(\frac{C}{P}\right)$$

Step 3

Approximate the bearing life from Table 1.

Table 1 • Relation of L₁₀ life and speed to $\left(\frac{C}{P}\right)$

1000	.44	1.0	0	.56	1.00

For values between those in the table linear interpolation can be used.

Life Adjustment

The Rating Life, L₁₀, may be modified for some applications in accordance with the formula

$$L'n = a_1 a_2 a_3 L_{10}$$

where L'n = Adjusted life for (100-n) % reliability,

a₁ = Life adjustment factor for reliability

a₂ = Life adjustment factor for material and processing

a₃ = Life adjustment factor for operating conditions.

For most normal applications, all factors will be taken as 1, and the Rating Life used as the selection basis or life estimate. In addition, as long as standard catalog bearings are used, a₂ will be normally set equal to one. The factor a₃ covers such things as lubrication, misalignment, and temperature. Some conditions that could yield a₃ significantly different than unity include speeds less than 20000 DN or greater than 200000 DN, temperatures below -40°F (-40°C) or above 275°F (135°C). For other possible conditions, as well as additional information on life adjustment factors, consult Rexnord Bearing Products.

Table 3 - Load Ratings

Size Code	C Basic load rating		Co Static load rating		Approximate speed limit RPM*			d Ball Diameter	N Number of balls	Nd ²
	Pounds	Newtons	Pounds	Newtons	N Seals	E Seals‡	Flingers	inches

218	21580	95990	14400	64000	2400	2250	3600	7/8	10	7.66

If the load P is greater than 15% of the C rating for S200 and 25% of the C rating for CL200, consult Rexnord Bearing Division.

For S200 Series reduce C Basic Load Rating by 23%.

For CL200 Series reduce C Basic Load Rating by 15%.

* Based on grease lubrication and moderate load.

‡ E seals operation at higher speeds up to N seal speed limit is allowable providing the lip seal friction does not result in operating temperatures over 225°F (107°C).

If the load P is greater than 15% of the C rating for S200 and 25% of the C rating for CL200, consult Rexnord Bearing Division.

For S200 Series reduce C Basic Load Rating by 23%.

For CL200 Series reduce C Basic Load Rating by 15%.

Operation in the high speed shaded areas requires frequent lubrication.

MPCL200N

Photo Shows a 2-Bolt Ball Bearing Pillow Block Unit

Product Features

- Corrosion-resistant powder coating
- Cast iron housing
- Broad range of sealing options
- Centrik-Lok shaft locking device
- Alignable & relubricatable
- See Features and Benefits for additional info on pages 400 - 401.

Additional Notes

- Please call 1-866-REXNORD for availability
- Lubrication fitting tap size, 1/8 in PT
- Base to centerline tolerance, +/- .005 in (+/- 0.13 mm)
- Lip seals standard
- ◆ Available with E1 viton seals
- Available with free running style seals, add suffix ● FF, □ HFF or △ MHFF
- Nickel plated housings available through all size codes, add suffix K75

For the Selection Guide, Load Ratings and Speed Limits, see the Link Belt 200 Series Medium Duty Ball Bearings Engineering section on pages 404 - 407.
Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

Additional Notes

- Please call 1-866-REXNORD for availability
- Lubrication fitting tap size, 1/8 in PT
- Lip seals standard
- ◆ Available with E1 viton seals
- Available with free running style seals, add suffix ● FF, □ HFF or △ MHFF
- Nickel plated housings available through all size codes, add suffix K75

For the Selection Guide, Load Ratings and Speed Limits, see the Link Belt 200 Series Medium Duty Ball Bearings Engineering section on pages 404 - 407.
 Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

MFS200N

Interchange: F4BSCM, FYM-TF, UCFX, MSF, YCJM

Photo Shows a 4-Bolt Ball Bearing Flanged Unit

Product Features

- Corrosion-resistant powder coating
- Cast iron housing
- Broad range of sealing options
- Spring locking setscrew mount
- Alignable & relubricatable
- See Features and Benefits for additional info on pages 400 - 401.

300 Series Heavy Duty Ball Bearing Units

300 Series wide inner ring ball bearing units are designed for heavy duty applications requiring high capacity and/or high speed in a compact footprint. Manufactured from quality alloy bearing steel to precision tolerances, these bearings are used extensively on general industrial equipment, high speed fans and blowers and heavier duty power transmission and material handling equipment.

Super-finished Raceways

- Provides a cool running, quiet, high-speed and high-load capacity bearing

Spyglass Optical Strain Sensor (OSS)

- Provides instant feedback for optimal shaft grip
- Eliminates damage to the shaft and bearing because of improper tightness on the mounting.
- Quick installation: Simply tighten collar until the Spyglass shows a back-to-color pattern.

Seal Choice

- Choice of steel-clad molded type H clearance seal or type N double lip seal.

Wide Inner Ring

- Wide inner ring is for greater contact surface between shaft and bearing.

Prelubricated and Relubricatable

Rugged One-piece Housing

Positive Locking System

- Minimizes vibration; does not require mounting inspections

Case Carburized Inner Ring

- Resists fracture under shock and heavy loads

Tapered Adapter Assembly

- Allows for use of commercial-grade shafting
- Shaft grip reduces shaft damage caused by loose mountings
- Easy removal of the bearing from the shaft – saves on maintenance time and damaged shafts
- Accommodates the use of inexpensive commercial grade shafting

Heavy Duty Ball Bearings

Heavy series precision alignable ball bearings of deep groove construction with larger balls and thicker rings for high capacity and longer life. The extra inner ring width furnishes ultimate shaft and load support and concentricity for high speed precision application.

The spring locking collar design provides a secure grip of the wide inner ring bearing to the shaft. The two setscrews extend through the inner ring of the bearing and lock firmly into the shaft. Tightening the two setscrews produces elastic strain in the spring locking collar resulting in a continuous pressure on the shaft.

The eccentric cam locking collar design provides a secure grip of the wide inner ring bearing to the shaft and further tightens with bearing rotation. The adapter mount design provides better concentricity and shaft control, increasing service life. The adapter mount allows for easy installation/removal and enables the use of commercial grade shafting.

Furnished with anti-rotation pin in the outer ring to prevent the outer ring from spinning in the bearing housing.

One-piece Cast Iron Housings

Compact, one-piece cast iron housings provide strength with minimum size and weight, and excellent rigidity. All housings are designed with standard mounting dimensions and have finished mounting surfaces for proper installation stability. Pillow blocks have slotted bolt holes with ample space provided for drilling dowel pin holes and are also available with high backing dimensions. Flanged and flanged cartridge units have drilled mounting holes. Take-up units have machined slots for accurate adjustment.

Bearing Mounted Molded Rubber Seal

Type H Seal

These molded rubber seals effectively retain lubricant and protect against contamination. An external seal guard enhances protection against contamination and protects the molded rubber seal. A snap ring locates and retains the molded rubber seal in the outer ring to ensure proper operation. This is an excellent non-contact seal for grease lubrication.

Type N Seal

These molded rubber double lip seals have two full land riding lips that effectively retain lubricant and protect against contamination. These seals ride on a precision ground surface of the bearing inner ring for smooth operation and tightness.

300 Series Nomenclature

Symbol	Description	P	E	-U	3	K	27	J	N	C	17H	4
C	Cartridge unit											
F	Flanged unit, 4-bolt square											
FC	Flanged cartridge unit, 4-bolt round											
P	Pillow block, standard backing											
PL	Pillow block, low backing											
P2	Pillow block, high backing											
T	Take-up, slotted guides											
E	Expansion unit											
A	Bearing sealed unit, SHURLOK adapter, relubricatable											
U	Bearing sealed unit, spring locking, relubricatable											
Y	Bearing sealed unit, eccentric cam locking collar, relubricatable											
3	300 Series ball bearing designation											
K	Adapter mounted											
27	Shaft size in sixteenths of an inch											
J	Steel retainers											
None	Steel clad clearance seal											
N	Molded double lip seals											
C	Closed end unit											
17H	Grease designation											
4	Clearance, other than standard

47	Shaft size in sixteenths of an inch						
None	Steel clad clearance seal						
N	Molded double lip seals						
L1	Bearing without collar						
L	Bearing with collar & setscrews						

300 Series Ball Bearings Selection Guide

To select a bearing, determine the applied radial load, the applied thrust load, the desired Rating Life, and applicable operating conditions. The procedure shown here will aid in selecting a bearing to meet an L_{10} design life. The formulas for calculating life expectancy should be used to determine the Rating Life L_{10} for the bearing selected.

The selection procedures and rating formulas shown here are in agreement with The American Bearing Manufacturers Association Standards and ANSI/ABMA STD 9-1990. Ratings are based on fatigue life. The Rating Life L_{10} or fatigue life at 90% reliability is the usual basis for bearing selection. To assure a satisfactory bearing application, fitting practice, mounting, lubrication, sealing, static rating, housing strength, operating conditions and maintenance must be considered.

Steps for Selection

Step 1

Determine an appropriate L_{10} design life.

Type of service	Operating time, hours per year	Design life, years	L_{10} design life, hours
Light seasonal usage	500 to 750	3-5	3,000
Heavy seasonal usage	1,400 to 1,600	4-6	8,000
Industrial—8 hour shift	2,000	10	20,000
Industrial—16 hour shift	4,000	10	40,000
Industrial—Continuous	8,700	10	80,000 to 100,000

Step 2

Determine a required $\left(\frac{C}{P}\right)$ from Table 1.

Step 3

Calculate the required C and select a ball bearing.

a For radial load only:

$$P = F_r$$

$$\text{required } C = \left(\frac{C}{P}\right) P \text{ using } \left(\frac{C}{P}\right) \text{ from Step 2}$$

Select a ball bearing from Table 3 with a basic load rating C equal to or greater than the required C.

b For combined radial and thrust loads when $\frac{F_a}{F_r}$ is 0.19 or less:

$$P = F_r$$

$$\text{required } C = \left(\frac{C}{P}\right) P \text{ using } \left(\frac{C}{P}\right) \text{ from Step 2}$$

Select a ball bearing from Table 3 with a basic load rating C equal to or greater than the required C.

Step 3 (continued)

c For combined radial and thrust loads when $\frac{F_a}{F_r}$ is greater than 0.19, use the following trial method:

$$\text{Maximum } P = .56F_r + 2.30F_a$$

$$\text{Maximum required } C = \left(\frac{C}{P}\right) P \text{ using } \left(\frac{C}{P}\right) \text{ from Step 2}$$

Select a trial ball bearing with a basic load rating C from Table 3 approximately equal to the maximum required C.

With this trial bearing calculate: $\frac{F_a}{Nd^2}$

Determine X and Y from Table 2.

Calculate P for the trial bearing.

$$P = XF_r + YF_a$$

$$\text{required } C = \left(\frac{C}{P}\right) P \text{ for the trial bearing using } \left(\frac{C}{P}\right) \text{ from Step 2}$$

Consult Table 3, basic load rating. If a smaller bearing meets or nearly meets the required C, its life expectancy can be calculated.

Note: If the load P is greater than .25C, consult Rexnord Bearing Products.

Selection

Symbols for formulas:

C = basic load rating, pounds (or newtons)
 C₀ = static load rating, pounds (or newtons)
 e = a reference value
 F_a = thrust load, pounds (or newtons)
 F_r = radial load, pounds (or newtons)
 L₁₀ = rating life, hours

n = speed, revolutions per minute
 P = equivalent radial load, pounds (or newtons)
 X = radial factor
 Y = thrust factor

Table 1 • Relation of L₁₀ life and speed to $\left(\frac{C}{P}\right)$

Bearing life, hours L ₁₀	$\left(\frac{C}{P}\right)$ ratio

Basic formula

$$\left(\frac{C}{P}\right) = \left(\frac{L_{10} \times n \times 60}{1,000,000}\right)^{1/3}$$

$$L_{10} = \frac{\left(\frac{C}{P}\right)^3 \times 1,000,000}{n \times 60}$$

Life Expectancy

To calculate the Rating Life L₁₀ of any selected or trial bearing:

Step 1 Determine the equivalent radial load P.

a For radial load only:
 P = F_r

b For combined radial and thrust load:
 P = X F_r + Y F_a using X and Y from Table 2 below.

Step 2 Calculate the ratio of basic load rating C to the equivalent radial load.

$$\left(\frac{C}{P}\right)$$

Step 3 Approximate the bearing life from Table 1.

Table 2 • X and Y factors for ball bearings

F _a Nd ²	e	F _a F _r ≤ e		F _a F _r > e	
		X	Y	X	Y
25	.19	1.0	0	.56	2.30
37.5	.21	1.0	0	.56	2.15
50	.22	1.0	0	.56	1.99
75	.24	1.0	0	.56	1.85
100	.26	1.0	0	.56	1.71
125	.27	1.0	0	.56	1.63
150	.28	1.0	0	.56	1.56
200	.30	1.0	0	.56	1.45
300	.34	1.0	0	.56	1.31
500	.38	1.0	0	.56	1.15
750	.42	1.0	0	.56	1.04
1000	.44	1.0	0	.56	1.00

For values between those in the table linear interpolation can be used.

Life Adjustment

The Rating Life, L₁₀, may be modified for some applications in accordance with the formula

$$L'n = a_1 a_2 a_3 L_{10}$$

where L'n = Adjusted life for (100-n) % reliability,

a₁ = Life adjustment factor for reliability

a₂ = Life adjustment factor for material and processing

a₃ = Life adjustment factor for operating conditions.

For most normal applications, all factors will be taken as 1, and the Rating Life used as the selection basis or life estimate. In addition, as long as standard catalog bearings are used, a₂ will be normally set equal to one. The factor a₃ covers such things as lubrication, misalignment, and temperature. Some conditions that could yield a₃ significantly different than unity include speeds less than 20000 DN or greater than 200000 DN, temperatures below -40°F (-40°C) or above 275°F (135°C). For other possible conditions, as well as additional information on life adjustment factors, consult Rexnord Bearing Products.

Table 3 • Load Ratings, Speed Limits and Ball Data

Size Code	C Basic load rating		Co Static load rating		Approximate speed limit RPM*		d Ball Diameter inches	N Number of balls	ND ²

351	28990	122980	19500	86600	3400	...	1-1/8	8	10.10
356	35070	142700	24100	107200	3100	...	1-1/4	8	12.50
363	45000	173100	31600	140500	2750	...	1-7/16	8	16.50

If the load P is greater than 25% of the C rating, consult Rexnord Bearing Division.

For U300 and Y300 Series reduce C Basic Load Rating by 23%

*Based on grease lubrication and moderate load.

Table 4 • Radial Load Ratings In Pounds At Various RPM For Appropriate L₁₀ Life Hours

If the load P is greater than 25% of the C rating, consult Rexnord Bearing Division.

For U300 and Y300 Series reduce C Basic Load Rating by 23%

Product Features

- Spyglass Optical Strain Sensor (OSS) Technology
- Positive locking system
- Tapered adapter sleeve
- Corrosion-resistant powder coating
- Cast iron housing
- Fixed or Expansion - Up to 3/8 in expansion
- Alignable & relubricatable
- See Features and Benefits for additional info on page 424.

Additional Notes

- Please call 1-866-REXNORD for availability
- Lubrication fitting tap size: for expansion units with shaft sizes 2 7/16 in and below, 1/4 in-28 UNF; for other expansion units and all fixed units, 1/8 in PT
- Base to centerline tolerance, +0.000 in/-0.010 in (+0.00 mm/-0.25 mm)
- 1 3/16 in thru 2 15/16 in shaft sizes also available with dual contact lip seals, add suffix N
- For the Selection Guide, Load Ratings and Speed Limits, see the Link-Belt 300 Series Heavy Duty Ball Bearings Engineering section on pages 426 - 429.
- Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

PU3K00, PEU3K00

Photo Shows a 2-Bolt Ball Bearing Pillow Block Unit

Product Features

- Corrosion-resistant powder coating
- Cast iron housing
- Enhanced life mounting style
- Fixed or Expansion - Up to 11/32 in expansion
- Alignable & relubricatable
- See Features and Benefits for additional info on page 424.

Additional Notes

- Please call 1-866-REXNORD for availability
- Lubrication fitting tap size, 1/8 in PT
- Base to centerline tolerance, +.000 in/-0.010 in (+0.00 mm/-0.25 mm)
- N dual contact lip seals standard
- For the Selection Guide, Load Ratings and Speed Limits, see the Link-Belt 300 Series Heavy Duty Ball Bearings Engineering section on pages 426 - 429.
- Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

FA300, FEA300

Photo Shows a 4-Bolt Ball Bearing Flanged Unit

Product Features

- Spyglass Optical Strain Sensor (OSS) Technology
 - Positive locking system
 - Tapered adapter sleeve
 - Corrosion-resistant powder coating
 - Cast iron housing
 - Fixed or Expansion - up to 3/8 in. Expansion
 - Alignable & relubricatable
- See Features and Benefits for additional info on page 424.

Additional Notes

- Please call 1-866-REXNORD for availability
- Lubrication fitting tap size: for shaft sizes 1 3/16 in and below, 1/4 in-28 UNF: for all other shaft sizes, 1/8 in PT
- Pilot Diameter tolerance, +.000 in/-0.002 in (+0.00 mm/-0.05 mm)
- Bore tolerance for mounting, +.002 in/-0.000 in (+0.05 mm/-0.00 mm)
- 1 1/8 in thru 1 7/16 in & 1 5/8 in thru 2 15/16 in shaft sizes also available with dual contact lip seals, add suffix N

For the Selection Guide, Load Ratings and Speed Limits, see the Link-Belt 300 Series Heavy Duty Ball Bearings Engineering section on pages 426 - 429.
 Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

CA300, CEA300

Photo Shows a Ball Bearing Cartridge Unit with Steel Housing

Product Features

- Spyglass Optical Strain Sensor (OSS) Technology
- Positive locking system
- Tapered adapter sleeve
- Corrosion-resistant powder coating
- Cast iron housing
- Fixed or Expansion - up to 3/8 in. Expansion
- Alignable & relubricatable
- See Features and Benefits for additional info on page 424.

SHURLOK Installation Tools

We are pleased to offer a quick installation tool for the SHURLOK bearing. This tool is designed as a supplement to the spanner wrench or drift pin method. The installation tool can be attached to a 3/4" or 1/2" drive ratchet, torque wrench, or breaker bar which can be used as a lever arm. Simply fit the installation tool over the locknut by placing the tool's teeth into the locknut slots. The tool's unique shape allows it to be used from the side or the top of the bearing. To order, refer to the table below for the installation tool that fits your shaft size.

Bearing Size	Wrench Style Installation Tool Part Number	Impact Style Installation Tool Part Number
323	N6107-SPN	N6107-IMP
327	N6111-SPN	N6111-IMP

Klean-Gard & Dura-Klean Ball Bearings For Beverage & Food Conveying Applications

Klean-Gard

Available in polypropylene (white) housings with stainless steel inserts. Housing styles available in pillow blocks, 2-bolt, 3-bolt & 4-bolt flanges. Snap-on cap (open or closed) available. Solid-back housings are designed to inhibit the growth of bacteria, mold, and mildew that may cause discoloration, odor, or degradation.

Always maintain good hygiene; proper cleaning procedures are still required.

Interchangeable with cast iron units. Beverage bearing configuration available upon request, add the prefix "W."

Dura-Klean

Rilsan nylon coated with black oxide inserts and food grade grease.

Available in pillow blocks, 2-bolt, 3-bolt & 4-bolt flanges and take-up units up to 1 15/16" bore size.

1. Corrosion Resistant Fittings for Relubrication

Bearing insert factory prelubricated with food-grade grease.

2. Reinforced Housing Material

Rugged, reinforced housing material available in Polypropylene (white) for extreme corrosion resistance.

3. Inch or Metric Shaft Sizes Available

4. Auxiliary Caps

Both open and closed auxiliary safety caps fit tightly to the machined housing and are sealed with heavy duty O-rings.

5. Stainless Steel Bushings and Washers

AISI 316 stainless steel spacer bushing and washer for trouble-free, positive mounting.

6. Rotary Shaft Seals

Front and rear auxiliary rotary shaft seals provided with spring loaded double lip seal to guard critical bearing components and prevent conveyor contamination.

7. Stainless Steel Ball Bearings

Alignable, high capacity, stainless steel ball bearing mounted with setscrews to the shaft. Integral bearing lip seals.

Klean-Gard & Dura-Klean Ball Bearings Selection Guide

To select a bearing, determine the applied radial load, the applied thrust load, the desired Rating Life, and applicable operating conditions. The procedure shown here will aid in selecting a bearing to meet an L₁₀ design life. The formulas for calculating life expectancy should be used to determine the Rating Life L₁₀ for the bearing selected.

The selection procedures and rating formulas shown here are in agreement with The American Bearing Manufacturers Association Standards and ANSI/ABMA Standards STD 9-1990. Ratings are based on fatigue life. The Rating Life or fatiguelife at 90% reliability is the usual basis for bearing selection.

Steps for Selection

Step 1

Determine an appropriate L₁₀ design life.

Type of service	Operating time, hours per year	Design life, years	L ₁₀ design life, hours
Light seasonal usage	500 to 750	3-5	3,000
Heavy seasonal usage	1,400 to 1,600	4-6	8,000
Industrial—8 hour shift	2,000	10	20,000

Step 2

Determine a required $\left(\frac{C}{P}\right)$ from Table 1.

Step 3

Calculate the required C and select a ball bearing.

a For radial load only:

$$P = F_r$$

$$\text{required } C = \left(\frac{C}{P}\right)P \text{ using } \left(\frac{C}{P}\right) \text{ from Step 2}$$

Select a ball bearing from Table 3 with a basic load rating C equal to or greater than the required C.

b For combined radial and thrust loads when $\frac{F_a}{F_r}$ is 0.19 or less:

$$P = F_r$$

$$\text{required } C = \left(\frac{C}{P}\right)P \text{ using } \left(\frac{C}{P}\right) \text{ from Step 2}$$

Select a ball bearing from Table 3 with a basic load rating C equal to or greater than the required C.

Series S200 and SS200 are extended on one side only for compactness and low cost. In combination with its companion line of economically designed housings, this series is applicable to light or moderate duty requirements. Also, economically designed housings must be applied within proportionate load limits.

To assure a satisfactory bearing application, fitting practice, mounting, lubrication, sealing, static rating, housing strength, operating conditions and maintenance must be considered.

Step 3 (continued)

c For combined radial and thrust loads when $\frac{F_a}{F_r}$ is greater than 0.19, use the following trial method:

$$\text{Maximum } P = .56F_r + 2.30F_a$$

$$\text{Maximum required } C = \left(\frac{C}{P}\right)P \text{ using } \left(\frac{C}{P}\right) \text{ from Step 2}$$

Select a trial ball bearing with a basic load rating C from Table 3 approximately equal to the maximum required C.

With this trial bearing calculate: $\frac{F_a}{Nd^2}$

Determine X and Y from Table 2.

Calculate P for the trial bearing.

$$P = XF_r + YF_a$$

$$\text{required } C = \left(\frac{C}{P}\right)P \text{ for the trial bearing using } \left(\frac{C}{P}\right) \text{ from Step 2}$$

Consult Table 3, basic load rating. If a smaller bearing meets or nearly meets the required C, its life expectancy can be calculated.

Note: If the load P is greater than .15C for series S200 and SS200, consult Rexnord Bearing Products.

Selection

Symbols for formulas:

C = basic load rating, pounds (or newtons)	n = speed, revolutions per minute
Co = static load rating, pounds (or newtons)	P = equivalent radial load, pounds (or newtons)
e = a reference value	X = radial factor
Fa = thrust load, pounds (or newtons)	Y = thrust factor
Fr = radial load, pounds (or newtons)	
L10 = rating life, hours	

Table 1 • Relation of L10 life and speed to $\left(\frac{C}{P}\right)$

Basic formula

$$\left(\frac{C}{P}\right) = \left(\frac{L_{10} \times n \times 60}{1,000,000}\right)^{1/3}$$

$$L_{10} = \frac{\left(\frac{C}{P}\right)^3 \times 1,000,000}{n \times 60}$$

Life Expectancy

To calculate the Rating Life L10 of any selected or trial bearing:

Step 1 Determine the equivalent radial load P.

- a For radial load only:
P = Fr
- b For combined radial and thrust load:
P = XFr + YFa using X and Y from Table 2 below.

Step 2 Calculate the ratio of basic load rating C to the equivalent radial load.

$$\left(\frac{C}{P}\right)$$

Step 3 Approximate the bearing life from Table 1.

Table 2 • X and Y factors for ball bearings

Fa Nd ²	e	Fa Fr ≤ e		Fa Fr > e	
		X	Y	X	Y
25	.19	1.0	0	.56	2.30
37.5	.21	1.0	0	.56	2.15
50	.22	1.0	0	.56	1.99
75	.24	1.0	0	.56	1.85
100	.26	1.0	0	.56	1.71
125	.27	1.0	0	.56	1.63
150	.28	1.0	0	.56	1.56
200	.30	1.0	0	.56	1.45
300	.34	1.0	0	.56	1.31
500	.38	1.0	0	.56	1.15
750	.42	1.0	0	.56	1.04
1000	.44	1.0	0	.56	1.00

For values between those in the table linear interpolation can be used.

Life Adjustment

The Rating Life, L10, may be modified for some applications in accordance with the formula

$$L'n = a_1 a_2 a_3 L_{10}$$

where L'n = Adjusted life for (100-n) % reliability,

a1 = Life adjustment factor for reliability

a2 = Life adjustment factor for material and processing

a3 = Life adjustment factor for operating conditions.

For most normal applications, all factors will be taken as 1, and the Rating Life used as the selection basis or life estimate. In addition, as long as standard catalog bearings are used, a2 will be normally set equal to one. The factor a3 covers such things as lubrication, misalignment, and temperature. Some conditions that could yield a3 significantly different than unity include speeds less than 20000 DN or greater than 200000 DN, temperatures below -40°F (-40°C) or above 275°F (135°C). For other possible conditions, as well as additional information on life adjustment factors, consult Rexnord Bearing Products.

Table 3 • Load ratings, speed limits and ball data

Size Code	C Basic Load Rating		Co Static Load Rating		Approximate Speed Limit RPM*	d Ball diameter inches	N Number of balls	Nd ²
	pounds	newtons	pounds	newtons				
204	2870	12,800	1480	6,590	7500	5/16	8	.781
205	3150	14,000	1760	7,830	6800	5/16	9	.879
206	4390	19,500	2530	11,300	5600	3/8	9	1.27
207	5810	25,800	3440	15,300	4800	7/16	9	1.72
208	7330	32,600	4460	19,900	4500	1/2	9	2.25
209	7370	32,800	4590	20,400	4000	1/2	9	2.25
210	7920	35,200	5220	23,200	3600	1/2	10	2.50

If the load P is greater than 15% of C rating for S200 and SS200, consult Rexnord Bearing Products.

For S200 and SS200 Series, reduce C Basic Load Rating by 23%.

*Based on grease lubrication and moderate load.

Table 4 • Radial load ratings in pounds at various RPM for appropriate L10 life hours

Size Code	L10 Minimum life, hours	Radial Load Ratings, Pounds/Speed, RPM																			
		50	100	200	300	400	500	600	700	800	900	1000	1200	1500	1800	2000	2500	3000	3500	4000	5000

Operation in the high speed shaded areas requires frequent relubrication.

Heavy lines define recommended speed ranges of bearing and seal variations.

If the load P is greater than 15% of C rating for S200 and SS200, consult Rexnord Bearing Products.

KLPSS200

Interchange: P2BSCEZ, SUCP200-PBT, KAS

Photo Shows a 2-Bolt Ball Bearing Pillow Block Unit with Stainless Steel Insert and Polypropylene Housing

Basic Unit	Open Unit with Auxiliary Seals	Closed Unit with End Cap and Seal
KLP-SS200	KLP-SS200D	KLP-SS200DC

Product Features

- Reinforced Polypropylene housing
- Stainless steel bearing insert
- Stainless steel bushing & washers
- Alignable & relubricatable
- Spring locking setscrew mount
- Prelubricated with food grade grease
- See Features and Benefits for additional info on page 454.

	40.00	KLPSS2M40														

Additional Notes

- Please call 1-866-REXNORD for availability
- Lubrication fitting tap size, Rp 1/8" parallel thread per ISO 7/1 latest revision
- Note: 1/8" PT external thread will not fit
- Polypropylene housings furnished with nitrile rubber seals, o-ring & AISI 316 stainless steel bushings and washers
- For the Selection Guide, Load Ratings and Speed Limits, see the Klean-Gard & Dura-Klean Ball Bearings Engineering section on pages 456 - 458.

Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

KLFXSS200

Interchange: F2BSCEZ, SUCFT200-PBT, KCJT

Photo Shows a 2-Bolt Ball Bearing Flanged Unit with Stainless Steel Insert and Polypropylene Housing

Mounting Surface to Inner Ring Hub Face

Open Unit with Auxiliary Seals

KLFX-SS200D

Closed Unit with End Cap and Seal

KLFX-SS200DC

Product Features

- Reinforced Polypropylene housing
- Stainless steel bearing insert
- Stainless steel bushing & washers
- Spring locking setscrew mount
- Alignable & relubricatable
- Prelubricated with food grade grease
- See Features and Benefits for additional info on page 454.

Steel

Series M1000, 1200, 1300, 1900, 5200, 5300, 6200, 7300 Cylindrical Roller Bearings

Metric series cylindrical roller bearings are manufactured to ABMA boundary dimensions. These bearings require minimum space and provide maximum rated capacity. Various configurations including separable inner or outer ring combinations offer ample application flexibility.

High Quality Rings

Rings of high quality bearing steel for strength, toughness and durability.

Microfinished Raceways Assure Smooth Operations

Optimized Raceway Contact Area

Exclusive honed crown on roller profile for optimized raceway contact area and high capacity.

Positive Roller Spacing

- Structural design segmented retainer provides high strength, positive roller spacing and guidance.
- One-piece formed Steel Retainer provides positive roller spacing and controlled roller guidance.

Polymeric Retainer

Polymeric retainer of glass fiber reinforced nylon 6/6 provides full roller guidance, superior lubrication and reduced noise.

Segmented Retainers

Rigid structural design segmented Steel Retainer provides high strength, positive roller spacing and guidance.

All contact surfaces are contoured to minimize the wiping action between retainer segments and rollers, assuring full roller lubrication. Precision spacer segments contact the rollers above and below pitch diameter resulting in low friction loss and positive roller control.

Polymeric Retainers

Made of glass fiber reinforced nylon 6/6, molded polymeric retainers provide close control of roller "drop," low noise, full roller guidance and superior lubrication, at a competitive price.

Extensive testing has established compatibility with a broad range of standard lubricants and satisfactory operation at sustained temperatures to 275°F.

Formed Steel Retainers

One-piece deep coined formed Steel Retainer combines strength with positive roller spacing and roller guidance.

The retainer guides the rollers below the pitch line and provides control of roller drop. Line contact of rollers on guidance surfaces minimizes wiping action and promotes hydrodynamic lubrication.

Optional Series and Configurations

Series M cylindrical roller bearings are available in seven series with segmented retainers, five series with formed Steel Retainers, several series with polymeric retainers, and five series of the full roller complement type. Various configurations, including separable inner or outer ring combinations are offered.

Rollers

Exclusively crowned honed rollers provide optimized contact at the raceway. This assures efficient bearing performance under load, provides controlled stress distribution under all loads within the design capacity and compensates for shaft deflection.

Rings

Rings are manufactured from high quality bearing steel to enhance fatigue resistance, strength, toughness and hardenability.

Bearings and ring and roller assemblies for omitted-ring applications are ABMA standard boundary plan for bore, outside diameter, and width... standard tolerances are RBEC-1. Precision tolerances to RBEC-5 are available.

Nomenclature

Symbol	Description	M	A	1	2	05	GEA	X	C0	
M	Metric series designation									
A	Plain cylindrical inner ring									
R	Single rib inner ring									
SN	Short, single rib w/inner ring side plate									
U	Double rib inner ring									
S	Metric bore size of next smaller bearing									
None	Standard capacity									
6	High capacity series									
1	Narrow width									
5	Wide width									
7	Intermediate width									
0	Extra light series									
2	Light series									
3	Medium series									
9	Extra extra light series									
05	One-fifth of bore diameter (mm)									
G	Snap ring groove in outer ring O.D.									
GG	Two snap ring grooves in outer ring O.D.									
R	Snap ring groove in outer ring O.D. snap ring included									
RR	Two snap ring grooves in outer ring O.D.; snap rings included									
C	Plain cylindrical outer ring									
D	Single rib outer ring									
E	Double rib outer ring									
SN	Short single rib w/outer ring side plate									
T	Outer ring w/two retaining rings in I.D.									
U	Single rib outer ring, one retaining ring in I.D.									
A	Oversize O.D. outer ring									
H	Blind dowel hole in outer ring O.D.									
X	Segmented retainer									
M	Full complement (no retainer)									
V	Formed Steel Retainer									
B	Polymeric retainer									
Wxxx	This suffix specifies special bearing features									
None	Standard commercial clearance									
C2	Less than basic clearance									
C0	Basic clearance									
C3	Greater than basic clearance									
C4	Greater than C3 clearance									
C5	Greater than standard clearance (STANDARD FOR ASSEMBLY WITH "A" OUTER RING AND OMITTED IN MODEL NUMBER)									
Cxxx	Special specific clearance or range—i.e. /C002 or /C35-49 or C3549									

Cylindrical Roller Bearings Selection Guide

To select a bearing, determine the applied radial load, any applied thrust load, the desired Rating Life, and applicable operating conditions. The procedure shown here will aid in selecting a bearing to meet an L₁₀ design life. The formulas for calculating life expectancy should be used to determine the Rating Life L₁₀ for the bearing selected. Cylindrical roller bearings are available in various series with cylindrical bores for direct shaft mounting.

Bearings in several series may fulfill the L₁₀ life requirements. Speed limits, minimum shaft diameters, arrangement requirements and space limitations may be determining factors in final bearing selection. The selection procedures and rating formulas shown here are in agreement with The American Bearing Manufacturers Association Standards and ANSI/ABMA STD 11. Ratings are based on fatigue life. The Rating Life L₁₀ or fatigue life at 90% reliability is the usual basis for bearing selection. Cylindrical roller bearings are essentially radial bearings. Nevertheless those styles where integral

ribs are in the proper location on inner and outer rings will also support thrust loading. In fact, most such styles do support incidental, axial locating loads. Whenever applied thrust loading is known to exist, the guidelines given for Thrust Loads on the next page must be carefully followed.

Selection and life expectancy formulas shown here are also valid for inner ring and roller assemblies and for outer ring and roller assemblies provided they are run directly on bearing quality steel shafts or housings properly hardened and ground. To assure a satisfactory bearing application, fitting practice, mounting, lubrication, sealing, static rating, housing strength, operating conditions and maintenance must be considered.

Steps for Selection

Step 1

Determine an appropriate L₁₀ design life.

Type of service	Operating time, hours per year	Design life, years	L ₁₀ design life, hours
Light seasonal usage	500 to 750	3-5	3,000
Heavy seasonal usage	1,400 to 1,600	4-6	8,000
Industrial—8 hour shift	2,000	10	20,000
Industrial—16 hour shift	4,000	10	40,000
Industrial—continuous	8,700	10	80,000 to 100,000
Continuous—high reliability	—	—	120,000 to 300,000

Step 2

Determine a required $\left(\frac{C}{P}\right)$ from Table 1.

Step 3

Calculate the required C and select a cylindrical roller bearing.

$$P = Fr$$

required $C = \left(\frac{C}{P}\right)P$ using $\left(\frac{C}{P}\right)$ from Step 2.

Select a cylindrical roller bearing of the desired type having a Basic Load Rating C equal to or greater than the required C from the appropriate series. The life expectancy of other sizes and series of cylindrical roller bearings can be calculated. When thrust load is present, check the individual bearing thrust capacity and follow the requirements for lubrication under thrust conditions.

Step 4

Determine the permissible speed limit of the bearing through the following procedure:

Permissible speed limits are of practical value only when considered with other factors of bearing operation. Not every application functions satisfactorily at the listed speeds. Load, lubrication, and temperature factors influence the performance. Bearing operation at the listed speed limit demands excellent lubrication, moderate load, and reasonable temperature environment.

Permissible speed can be approximated from the limiting DN value, which is the product of the bearing bore in millimeters and the speed in RPM. The DN values shown below are nominal. For higher permissible speeds, consult Rexnord Bearing Division.

Bearing series	Limit of DN Value*
DN value = Bearing bore (mm) x speed (RPM)	
Series 1900, 1000, 1200, 1300 & 7300	
with segmented or polymeric retainer	450,000
with formed Steel Retainer	250,000
Series 5200, 6200, and 5300	
with segmented or polymeric retainer (5200, 5300 only)	330,000
with formed Steel Retainer	180,000
Full complement	150,000

*These values assume oil lubrication

Selection

Symbols for formulas:

- C = Basic Load Rating, pounds (or newtons)
- Co = static Load Rating, pounds (or newtons)
- Fr = radial load, pounds (or newtons)
- L10 = rating life, hours
- n = speed, revolutions per minute
- P = equivalent radial load, pounds (or newtons)

Table 1 • Relation of L10 life and speed to $\left(\frac{C}{P}\right)$

Basic Formulas

$$\left(\frac{C}{P}\right) = \left(\frac{L_{10} \times n \times 60}{1,000,000}\right)^{3/10}$$

$$L_{10} = \frac{\left(\frac{C}{P}\right)^{10/3} \times 1,000,000}{n \times 60}$$

Life Expectancy

To calculate the Rating Life L10 of any pair of selected or trial bearings:

Step 1

Determine the equivalent radial load P.

$$P = F_r$$

Step 2 Calculate the ratio of the bearing Basic Load Rating C to the equivalent radial load.

$$\frac{C}{P}$$

Step 3

Approximate the bearing life from Table 1.

Thrust Loads

The integral guiding ribs on standard cylindrical roller bearing inner and outer rings will support limited thrust loads. In addition, special tolerances and processing can be used to substantially increase axial load capacity. In either case, excellent lubrication (preferably with an EP lubricant) and a stabilizing radial load are required. For standard bearings, the allowable thrust load is estimated as

$$TM = \frac{C_A}{3n^{0.3}}$$

- where TM Maximum allowable thrust load, pounds (or newtons)
- CA Load rating C (pounds or newtons) of the narrowest series for the given annulus (O.D. and bore) at 33 1/3 RPM and 500L10 hours.
- n Operating speed, RPM

In addition, the thrust load should be no greater than 25% of the radial load. Where application conditions exceed either of these limits, Rexnord Bearing Division should be consulted.

Life Adjustment

The Rating Life, L10, may be modified for some applications in accordance with the formula

$$L_n = a_1 a_2 a_3 L_{10}$$

- where Ln = Adjusted life for (100-n) % reliability,
- a1 = Life adjustment factor for reliability
- a2 = Life adjustment factor for material and processing
- a3 = Life adjustment factor for operating conditions.

For most normal applications, all factors will be taken as 1, and the Rating Life used as the selection basis or life estimate. In addition, as long as standard catalog bearings are used, a2 will be normally set equal to one. The factor a3 covers such things as lubrication, misalignment, and temperature. Some conditions that could yield a3 significantly different than unity include speeds less than 20000 DN or greater than 200000 DN, temperatures below -40°F (-40°C) or above 275°F (135°C), or misalignment greater than 0.0005 radians. For other possible conditions, as well as additional information on life adjustment factors, consult Rexnord Bearing Division.

Shaft Bearing Seat Diameters

Bearing bore tolerances are in accordance with the system of tolerancing established by the International Standards Organization (ISO) and adopted by the American Bearing Manufacturers Association (ABMA) and the American National Standards Institute (ANSI).

A system of limits and fits has been established by ISO for shafts. A portion of this system has been adopted by ABMA to provide flexibility in selecting shaft fits. Shaft fits are designated by a lower case letter and a number, such as h6. The letter indicates the location of the shaft tolerance limits with respect to the nominal bearing bore. The number indicates the size of the tolerance zone.

Shaft fits recommended for various types of applications are listed in the table at right. A graphic relationship of various shaft fits is illustrated in the figure at the left.

Many factors influence the proper fit of the bearing inner ring on a shaft. The magnitude of the load and its direction with respect to bearing inner or outer rings are generally the first factors considered in shaft fit selection. The effects of other factors such as vibration, shock, temperature, speed, etc., are of secondary importance but sometimes need to be considered. Where assembly or disassembly requirements are of prime importance special shaft fits may be required.

Appropriate diameter shafting is determined (as shown) from the tables below.

Class of Fit and Shaft Diameters (inches/μm)

▲ Symbol L indicates a loose or clearance fit. Symbol T indicates a tight or interference fit. The appropriate shaft diameter for any class of fit can be easily determined by applying the shaft tolerance to the nominal shaft diameter. Example: (Using basic bearing size 03 and fit class h6)

	inches		mm	
Nominal shaft diameter	= .6693	.6693	= 17.000	17.000
Shaft diameter tolerance	= +.0000	-.0004	= + 0.000	-0.010

Resultant shaft diameter = .6693 .6689 = 17.000 16.989

1 μ m = .001 mm

■ For solid steel shafts.

● C = Basic Load Rating of bearing.

▲ The arithmetical mean of the largest and smallest single diameter to be within tolerance shown. Allowable deviations from mean diameter per ANSI/ABMA STD 20, latest printing.

Housing Bearing Seat Diameters

Bearing outside diameter tolerances are in accordance with the system of tolerancing established by the International Standards Organization (ISO) and adopted by the American Bearing Manufacturers Association (ABMA) and the American National Standards Institute (ANSI).

A system of limits and fits has been established by ISO for holes. A portion of this system has been adopted by ABMA to provide flexibility in selecting housing fits. Housing fits are designated by a capital letter and a number such as H7. The letter indicates the location of the housing bore tolerance limits with respect to the nominal bearing O.D. The number indicates the size of the tolerance zone.

Housing fits recommended for various types of applications are listed in the table at the right. A graphic relationship of various housing fits is illustrated in the figure at the left. The class of fit is determined by nature of loading (oscillating, vibrating, reversing, etc.), axial movement requirements, temperature conditions, housing material and cross section of housing.

Shaft expansion increases bearing center distances and requires all but one bearing on a shaft to be movable axially in the housing. In most bearings the outer rings are subjected to stationary loads which permit a loose housing fit.

Operating temperature may affect the housing fit, as the housing may dissipate heat rapidly and not expand with the outer ring. However, the loose fit must never be greater than necessary. Excessive looseness results in less accurate shaft centering and additional ring deformation under load.

The appropriate housing bores are determined (as shown) from the tables below.

Class of Fit and Housing Bores (inches/ μ m)

▲ Symbol L indicates a loose or clearance fit. Symbol T indicates a tight or interference fit. The appropriate housing bore for any class of fit can be easily determined by applying the housing tolerance to the nominal housing bore. Example: (Using basic bearing size 926 and fit class N7)

Nominal housing bore	inches = 7.0866	mm = 180.000
Housing bore tolerance	= -.0006 - .0022	= -.012 - .052
Resultant housing bore	= 7.0860	= 179.988

Operation Without Inner Ring/Outer Ring

Outer Ring and Roller Assembly

for Series M-EX, M-EAX, M-EB, M-EAB, M-TV, M-TAV, M-UV and M-UAV

Cylindrical roller bearings with the inner ring omitted may be installed so that the rollers operate directly on the surface of the shaft.

This type of design is useful for applications where space is limited or a larger shaft is required. Surface hardness of shaft must be Rockwell C59 to C64 to achieve full bearing capacity. Where the required hardness cannot be attained, the bearing rating must be reduced accordingly. Where the shaft is case hardened, the combination of case depth and core hardness must be adequate. Consult Rexnord Bearing Division for a specific recommendation. Shaft surface should be finished to a roughness value of 13 micro-inches, RMS, maximum (.33 μm).

Maximum and minimum shaft diameter values for tap fit and press fit outer rings are listed below.

Hardness Factor

If operation at rated capacity is desired when cylindrical roller bearings are used with either ring omitted, the surface on which the rollers operate must have a hardness of Rockwell C59 to C64 or equivalent Brinell hardness (see chart below). If this hardness cannot be attained, the bearing C capacity must be reduced by a rating reduction factor determined from chart on facing page.

Inner Ring and Roller Assembly

for Series MU-X, MU-B

Cylindrical roller bearings with the outer ring omitted may be installed so that the rollers operate directly on the hardened and ground surface of a bore in an alloy steel housing.

This type of design is useful for applications where space is limited and a smaller housing bore or a larger bearing and shaft are required. Housing surface hardness must be Rockwell C59 to C64 or Brinell equivalent to achieve full bearing capacity. Where the required hardness cannot be attained, the bearing rating must be reduced accordingly. See graph for rating reduction factor. Where the housing bore is case hardened, the combination of case depth and core hardness must be adequate. Consult Rexnord Bearing Division for a specific recommendation. Housing surface should be finished to a roughness value of 13 micro-inches, A.A., maximum (.33 μm).

Maximum and minimum housing bore values for tap fit and press fit inner rings are listed on the next page.

Additional Notes

- Please call 1-866-REXNORD for availability
- Dimensions "R" & "r", largest fillet radius that will clear bearing corners
- For the Selection Guide, Load Ratings and Speed Limits, see the Link-Belt Cylindrical Roller Bearing Engineering section on pages 474 - 489.
- For shaft and housing bearing seat diameters, see Link-Belt Cylindrical Roller Bearing Shaft & Housing Seat Diameters section on pages 484 - 487.
- Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

60 mm, 65 mm, 70 mm Bores

Photo Shows an Unmounted Cylindrical Roller Bearing Assembly

Product Features

- Fully crowned rollers
- Precision ground ribs
- Contoured roller pockets
- Rollers individually separated
- Optional full complement
- See Features and Benefits for additional info on page 472.

Rex RPT Bearings

Rex RPT bearings are self-lubricating, non-metallic straight sleeve, round bore bearings in industry standard outside diameter, inside diameter and length dimensions. Ideal for a wide range of wet and dry applications, including aerial lifts, pallet and reach trucks, boat lifts, seeders, tillers, plows, sprayers, fillers and cappers, valves and many more, our bearings offer customers a competitive economical solution for all of their toughest problems. Additionally, customers can count on Rexnord to deliver these in-stock bearings in industry-leading turnaround times of five business days to three weeks.

General Bearing Information:

- Typical dynamic loading from 500 to 12,000 psi
- Operating temperatures from -320 °F to 325 °F (-195.6 °C to 162.8 °C)
- Static and dynamic coefficient of friction from .12 to .06

Features and Benefits

Range of in-stock standard diameter, lengths and wall dimension options

Diameter sizes range from 1/2 inch to 5 inches; lengths are available from 1/4 inch to 10 inches; with wall thicknesses of 1/8 inch and 1/4 inch.

Unique Composition

The non-metallic design combination of Teflon™ fiber, fiberglass and resin offers a corrosion-, moisture-, seizure-, chemical- and fretting-resistant product which reduces downtime and improves productivity.

Rugged Performance

The non-metallic combination is an alternative to metallic bushings that require lubrication in low to moderate load applications. The self-lubricated design maintains peak performance throughout the product life while allowing the customer to eliminate costly lubrication systems.

Lightweight Solution

Rex RPT bearings weigh 77 percent less than steel bearings and 30 percent less than aluminum bearings. This reduced weight offers easier handling and installation and a reduced equipment weight which will lower maintenance costs and provide an extra-long product life.

Variety of Uses

The non-metallic combination allows the Rex RPT bearing to provide electrical insulation as well as reduced noise levels compared to metallic bushings. This bearing can be used on a wide variety of equipment, including underwater applications and other hard to access locations.

▼ Teflon™ is a trademark of The Chemours Company FC, LLC used under license by Toray Fluorofibers (America), Inc.

Nomenclature

Symbol	Description	
		7GP1 - 08 12 - 028
7GP1	Rex RPT Straight Sleeve Bearing	
08	Bearing Nominal ID in sixteenths of an inch (1 inch = 16)	
12	Bearing Nominal OD in sixteenths of an inch (1 inch = 16)	
028	Bearing Length in sixteenths of an inch (1 inch = 016)	

Design and Application Guidelines

The overall performance of filament wound bearings is directly affected by operating factors such as applied loads, operating motions, duty cycle, environmental conditions, installation methods, shaft finish and hardness. While specific design criteria are not available for all applications, certain guidelines must be followed to provide the rated life.

Loads and Ratings

The filament wound back-up material in RPT journal bearings is capable of withstanding static radial load levels as high as 60,000 psi on the projected bearing area. This is in excess of the fabric liner capability of 50,000 psi based on previous experiences. The load deflection relationship of RPT journal bearings and metal-backed Teflon[™] lined bearings is very similar. The yield point and ultimate strength of the filament wound back-up material are approximately equal.

Project Bearing Area (PBA) = I.D. x Length

$$\text{Bearing Stress (PSI)} = \frac{\text{Bearing Load}}{\text{PBA}}$$

Load-life Relationship

Since accumulated wear terminates the useful life of a properly selected Teflon[™] liner bearing, the RPT selection procedure is based on the use of Bearing Area Factors (BAF), rather than load ratings, to select a bearing which meets the combined load-life requirements of the application. The Bearing Area Factor (BAF) is a numerical index of a bearing's dynamic performance ability and is based upon effective bearing area.

RPT bearings are rated on the basis of L10 life expectancy which means that 90% of a given group of bearings will exceed the predicted life. The correlation of load and life is shown in the lower half of the Selection Chart which relates the BAF to cycle of life.

Bearing Area Factor

$$\text{BAF} = \text{I.D.}^{0.491} \times (W - .090)$$

I.D. = Bearing Inner Diameter

W = Bearing Length

All dimensions are in inches

Sharp Machining Marks

Polished Machining Marks

Surface roughness values do not define the character of the finish. Polished shafting (right) normally produces longer bearing life.

Full Rotation

Full rotation can be accommodated if load and speed are below the curve in the following graph. See reference formula for pressure and velocity.

Formulae used in the selection of RPT bearings.

$$\text{Bearing Pressure} \quad \text{PSI} = \frac{\text{Load lbs.}}{\text{I.D.} \times \text{W}}$$

Speed (Surface Velocity)
Full Rotation

$$\text{Surface velocity (Ft/Min)} = .262 \times \text{I.D.} \times \text{RPM}$$

*All dimensions are in inches

Friction

Rex RPT bearings offer low-friction operation. Friction coefficients vary from .12 to .06 depending on the load level. Increased loading results in significant decrease in coefficient of friction. Also, as the bearing "breaks in", the coefficient of friction decreases.

Motion

RPT bearings can withstand various degrees of motion, depending upon speed and load. They will operate under all degrees of motion normally encountered in applications. Note that the degree of oscillation can affect bearing performance and must be taken into account when making a bearing selection, as shown on the nomograph.

Laboratory testing of filament journal bearings has shown their capacity to operate successfully under the low speeds, (less than 90 cycles per minute), high load conditions, (up to 20,000 psi), as well as the high speeds, (up to 300 cpm), light load (less than 5,000 psi) conditions.

Temperature

The normal operating temperature range for RPT bearings is -320 °F to 325 °F. Satisfactory operation can be obtained with limited exposure to temperatures as high as 400 °F. However, at continuous temperatures above 325 °F, an increase in wear rates will be experienced. Contact a Rexnord engineer for applications at cryogenic temperature, as well as for applications.

Shaft Recommendations

Since the shaft surface significantly affects the operation of the journal bearing design, its selection in regard to material, hardness, coating and surface roughness is crucial.

High loads require smooth surfaces with hardened and heat-treated shafts. With stress levels above 8,000 psi, shafting should have a surface finish of 8 micro inch or better to achieve optimum performance. However, tests have been run on 25-30 micro inch finishes with 55 Rc shafts at 4,000 psi with acceptable results.

Shafting Materials

A number of shaft materials have been used in conjunction with RPT bearings:

1. 52100 high carbon steel
2. 4140 chrome and nickel plated steel
3. 300 and 400 series stainless steel
4. Precipitation hardened grades 17-4PH, 15-5PH, 13-8PH Moly chrome and nickel plated stainless steel
5. 2000 and 7000 series aluminum grade hard-anodized
6. Low to high carbon steels

Rex RPT Bearing Selection

The RPT selection graph is designed to handle general applications described by the following parameters:

- Speed not exceeding 60 cycles per minute (12FPM)
- Pressures not exceeding 25,000 psi
- Oscillations 10° and greater, up to 90° included angle

For application requirements exceeding these parameters – consult a Rexnord engineer.

RPT selection problems are typically either: (a) a life calculation where load and size are known or (b) a size selection, where load and required life are known.

Using the selection graph, and following the steps outlined can handle either situation:

Life Calculation – (known load, oscillation and bearing size)

1. Convert oscillation angle to included angle, then follow that line horizontally until it intersects load level.
2. From that point, drop vertically down the chart until the BAF value is intersected. See section Design and Application Guidelines - Load-life relationship for complete explanation of BAF.
3. From that point, follow horizontally and read resulting cycles of life (to .006 wear).

Size Selection – (known load, oscillation and required life)

1. Locate the intersection of the oscillation angle and load lines.
2. Drop vertically down the chart until the required life value is intersected.
3. Determine the required capacity BAF by following the inclined line from that point.
4. Select appropriate size bearing from the thin or heavy series with a BAF in excess of that value, incorporating any known size restrictions – and checking to assure that pin strength (bending) is adequate.

Example – Life Calculation – See graph “BLACK LINES (Dashed)” for example below

Information required to use the selection chart is as follows:

- Oscillation angle ±25 degrees
- Radial Load 15,000 lbs
- Bearing size 1" dia, 5/8" long

1. Included angle equals the plus and minus motion although the midpoint of the cycle, ±25 degrees equals an included angle of 50 degrees (point 1)
 - a. Radial load equals 15,000 lbs (point 2). These two intersect at (point 3).
2. The BAF for a 1" dia., with 5/8" (.625) width bearing is .536, as found (point 4). This line intersects that (point 3) requirement at (point 5).
3. To determine life to .006 inch wear from chart read the vertical axis value (point 6), which equals 130,000 cycles. Information required to use the selection chart is as follows:

Example – Size Selection – See graph “BLUE LINES (Bolded)” for example below

Information to use chart is as follows:

- Oscillation angle ±30 degrees
- Radial Load 20,000 lbs
- Required life 500,000 cycles
- Size restriction Cannot exceed 1-1/4" dia pin

1. Included angle equals the plus and minus motion through the midpoint of the cycle, thus ±30 degrees equals an included angle of 60 degrees (point 7), the radial load is 20,000 pounds (point 8), and the intersection of angle and load is (point 9).
2. Move down the chart vertically until the 500,000 cycle life (point 10) line is intersected - (point 11).
3. Follow the inclined line and read the required BAF value (point 12) or 1.5.
4. With a required BAF of 1.5, any bearing from the Product Data Sheets that exceeds the value could be selected ie. with a 1-1/4" dia. pin, a 1-1/2" length is required, thus a 7GP1-2024-024. However, if a 1" dia. pin will accept the load, a longer 1-3/4" length is required (7GP1-1620-028). Checking of pin bending strength is appropriate.

1/8 Inch Wall Straight Sleeve Bearing

Product Features

- Corrosion Resistant
- Self-Lubricating
- Wide Range of Bore sizes and lengths
- Lightweight Teflon and Polyester Construction
- Operating Temps: -320 °F to 325 °F
- Underwater Operation Capability

Standard MODEL SIZES are noted in BLACK. For MODEL SIZES in (BOLD) and shaded (Gray) consult with Rexnord Rex RPT Engineering.

1/4 Inch Wall Straight Sleeve Bearing

Product Features

- Corrosion Resistant
- Self-Lubricating
- Wide Range of Bore sizes and lengths
- Lightweight Teflon™ and Polyester Construction
- Operating Temps: -320 °F to 325 °F
- Underwater Operation Capability

Filament Bearings

Rexnord Duralon Filament Bearings are a self-lubricated bearing, normally used between 4,000 and 30,000 psi in sliding and oscillating linkages. It is constructed from woven Teflon[™] high strength fiber and bondable yarns to make up the bearing element. Continuous strands of fiberglass and epoxy resin make up the matrix of the composite bearing material.

Features and Benefits

Strength

Applications that have 30,000 psi dynamically
Optimizes strength/weight ratio

Corrosion Resistance

Resists galvanic and fretting corrosion

Self-Lubricating

Eliminates contaminating lubricants
Operates above or below useful
temperature of lubricants
Eliminates complex lubrication systems
Minimizes slipstick problems

Seizure Resistance

Minimizes galling and scoring

Lightweight

77% of steel weight, 30% of aluminum –
easier handling, reduces equipment weight

Non-Metallic

Electrical insulation
Reduces noise volumes
USDA approved for non-contact use

Sizes and Shapes Available

Straight Sleeve Bearings

Round, Square and Hex Bore
Round Bore Diameter – 1/8" to 26"
PTFE fabric on ID bore and optional on OD

Linear Bearings

Bore Diameter – 1/4" to 4"
Available in open configuration to
clear pedestal shaft mounts

Flange Bearings

Bore Diameter – 1/8" to 26"
Available with or without woven
PTFE liner on the flange face

Thrust Washers

Outer Diameter – 3/8" to 18"

Spherical Annular

Bore Diameter – 1/4" to 6"

Actuator Bearing

Bore Diameter – consult Rexnord Engineering
Bore Shapes – Helical and threaded

Design and Application Guidelines

The overall performance of filament wound bearings is directly affected by operating factors such as applied loads, operating motions, duty cycle, environmental conditions, installation methods, shaft finish and hardness. While specific design criteria are not available for all applications, certain guidelines must be followed to provide the rated life.

Loads and Ratings

The filament wound back-up material in Duralon journal bearings is capable of withstanding static radial load levels as high as 60,000 psi on the projected bearing area. This is in excess of the fabric liner capability of (50,000 psi) based on previous experiences. The load deflection relationship of Duralon journal bearings and metal-backed Teflon[™] lined bearings is very similar. The yield point and ultimate strength of the filament wound back-up material are approximately equal.

$$\text{PSI} = \frac{\text{Load lbs.}}{\text{I.D.} \times \text{W}}$$

Load-life Relationship

Since accumulated wear terminates the useful life of a properly selected Teflon[™] liner bearing, the Duralon selection procedure is based on the use of Bearing Area Factors (BAF), rather than load ratings, to select a bearing which meets the combined load-life requirements of the application. The Bearing Area Factor (BAF) is a numerical index of a bearing's dynamic performance ability and is based upon effective bearing area.

Duralon bearings are rated on the basis of L10 life expectancy which means that 90% of a given group of bearings will exceed the predicted life. The correlation of load and life is shown in the lower half of the Selection Chart which relates the BAF to cycle of life. BAF values for bearings involving standard combinations of bore and length, are shown in the bearing listings.

Bearing Area Factor

$$\text{BAF} = \text{I.D.}^{0.491} \times (\text{W} - .090)$$

I.D. = Bearing Inner Diameter

W = Bearing Length

All dimensions are in inches

Motion

Duralon bearings can withstand various degrees of motion, depending upon speed and load. They will operate under all degrees of motion normally encountered in applications. Note that the degree of oscillation can affect bearing performance and must be taken into account when making a bearing selection, as shown on the nomograph.

Laboratory testing of Filament journal bearings has shown their capacity to operate successfully under the low speeds, (less than 90 cycles per minute), high load conditions, (up to 30,000 psi), as well as the high speeds (up to 300 cpm), light load (less than 5,000 psi) conditions.

Temperature

The normal operating temperature range for Duralon bearings is -65° to 325° F. Satisfactory operation can be obtained with limited exposure to temperatures as high as 400° F. However, at continuous temperatures above 325° F an increase in wear rates will be experienced. Contact a Rexnord engineer for applications at cryogenic temperature, as well as for applications.

Shaft Recommendations

Since the shaft surface significantly affects the operation of the journal bearing design, its selection in regard to material, hardness, coating and surface roughness is crucial.

High loads require smooth surfaces with hardened and heat treated shafts. With stress levels of 8,000 to 30,000 psi shafting should have a surface finish of 8 micro inch or better to achieve optimum performance. However, tests have been run on 25-30 micro inch finishes with 55 Rc shafts at 4,000 psi with acceptable results.

Shafting Materials

A number of shaft materials have been used in conjunction with Duralon bearings:

1. 52100 high carbon steel
2. 4140 chrome and nickel plated steel
3. 300 and 400 series stainless steel
4. Precipitation hardened grades 17-4PH, 15-5PH, 13-8PH
Moly chrome and nickel plated stainless steel
5. 2000 and 7000 series aluminum grade hard-anodized
6. Low to high carbon steels

Sharp surface scratches

Smooth surface scratches

Surface roughness values do not define the character of the finish. Polished shafting (right) normally produces longer bearing life.

Thinwall Straight Sleeve Bearing

Product Features

The bearing consists of a self-lubricating woven Teflon ▼ fiber and polyester liner supported by a filament wound continuous fiberglass fiber and epoxy resin matrix.

Additional Notes

- Size:** Standard sizes - from .250" to 2.500" inside diameter
- Load:** Typical dynamic loads - 4,000 to 30,000 psi, Ultimate 77,000 psi
- Motion:** Oscillatory, pivot, linear sliding and slow speed full rotation
- Friction:** Coefficients vary from .16 @ 500 psi to .07 @ 20,000 psi
- Electrical:** Filament wound back-up material is an electrical insulator
- Chemical:** Resistant to most chemicals, see Appendix or consult Rexnord engineer
- Temperature:** -65°F to +325°F for Continuous, 400°F for Intermittent - Style 702
-65°F to +250°F for Continuous or Intermittent - Style 703

For part number sizes shaded in gray please consult Rexnord Bearing Engineering

Thrust Washers

Woven PTFE Liner

Product Features

The thrust washer is constructed by bonding woven Teflon™ fiber fabric liner to one or both faces of a washer substrate. The substrate may be metallic, such as low carbon steel, stainless steel or aluminum. It may also be a non-metallic substrate such as NEMA grade G-10 or NEMA grade C. Standard washers are made with G-10 substrate.

- Load:** Typical dynamic loads - 4,000 to 20,000 psi, Ultimate 60,000 psi
- Motion:** Oscillatory and slow speed full rotation
- Friction:** Coefficients vary from .16 @ 500 psi to .07 @ 20,000 psi
- Electrical:** G-10 substrate material is an electrical insulator
- Chemical:** Resistant to most chemicals, see Appendix or consult Rexnord engineer
- Temperature:** Cryogenic to +250°F

For part number sizes shaded in gray please consult Rexnord Bearing Engineering

Annular Bearings

Product Features

The self-lubricating bearing element consists of a woven Teflon[™] fiber and polyester fiber liner supported by a filament wound continuous fiberglass fiber and epoxy resin matrix. The mating element (wear surface) is metallic.

Additional Notes

Size: Standard sizes - from .250" (821 Series) to 6.000" (801 Series) inside diameter

Load: Typical dynamic loads - 4,000 to 20,000 psi

Motion: Oscillatory, pivot, slow speed full rotation, for linear consult Rexnord engineer

Friction: Coefficients vary from .16 @ 500 psi to .07 @ 20,000 psi

Electrical: The composite component filament wound back-up material is an electrical insulator

Chemical: Resistant to most chemicals, consult Rexnord engineer

Temperature: -65°F to +325°F for Continuous, 400°F for Intermittent

(801) bearings are supplied with 17- 4 PH Stainless Steel Ball. Consult Rexnord Engineering for other available materials

(821) Replaceable composite ball with metallic loader slot outer race

Rigid Sleeve Bearing Units and Take-ups

Rigid sleeve bearing units provide compact and reliable usage in applications where continuous operation and uninterrupted service are required. Because the bearing material wears gradually, sudden breakdowns and costly maintenance are minimized. Sleeve bearings can also operate extremely quietly. The standard bearing materials of babbitt, bronze and cast iron will handle a wide variety of applications such as on log decks, sewage treatment equipment, furnaces and ovens, quiet operating fans and blowers, power plant dampers and stokers, oscillating shaft applications and other general conveying and power transmission machinery. Babbitt bearings are used for moderate speeds and loads and ambient temperatures up to 130°F (54°C). Babbitt has the ability to give excellent service with a minimum of maintenance.

Bronze bearings are recommended for heavier loads, impact, and temperatures beyond the limits of babbitt bearings. They can be operated at ambient temperatures up to 300°F (149°C) providing satisfactory lubrication is available. Bronze has excellent all-around bearing characteristics; it has a relatively low coefficient of friction and a remarkable resistance to shock and wear.

1. Secure Mounting

Bearing of babbitt or bronze is securely anchored in housing.

2. Lubrication

Housing is drilled and tapped for grease cup or lubrication fitting; grooves distribute lubricant over loaded area.

3. Finished Ends

Finished ends permit flush mounting of pulley, sprocket, or collar against bearing when required.

4. Two-piece Pillow Block

Two-piece pillow block has shims to provide for adjustment and compensate for wear.

5. Finished Mounting Surface

Mounting surface is finished to provide firm seating on flat support.

One-piece Pillow Blocks

One-piece pillow blocks are recommended for general applications where it is unnecessary to remove a bearing cap. They are available with babbitt, bronze or plain bore cast iron bearings.

Two-piece Pillow Blocks

Two-piece pillow blocks are used whenever a bearing with a removable cap is required. They are available with babbitt or bronze bearings.

For heavy side pressures or angular loading, housings with gibbed joints provide greater strength. Cast steel housings are used where sudden shocks or heavy impact loads are encountered.

Flanged Units

Flanged units with square flanges have slotted mounting holes to make them interchangeable with most common ball and roller bearing bolting patterns. These units have either babbitt or bronze bearings.

Nomenclature

Symbol	Description	2K	15	95	F	Z-
None	One-piece housing, cast iron	-----	-----	-----	-----	-----
2—	Two-piece housing, cast iron					
2K	Two-piece housing, cast steel					
10	Pillow block, one-piece, 2-bolt base	-----	-----	-----	-----	-----
11	Pillow block, plain iron (no sleeve)					
12	Pillow block, angle type split joint, 2-bolt base					
13	Pillow block, angle type split joint, 4-bolt base					
14	Pillow block, horizontal gibbed joint, 4-bolt base					
15	Pillow block, angle type split joint, 40° off horizontal					
F22	Flanged unit, square, 4-bolt	-----	-----	-----	-----	-----
DS28	Take-up, conveyor, heavy rigid frame					
DSB28	Take-up, conveyor, heavy hinged frame	-----	-----	-----	-----	-----
95	Shaft diameter in 16ths of an inch					
F	4-bolt base (units 1000, 1100 only)	-----	-----	-----	-----	-----
None	Babbitt bearing (except units 1100)					
Z	Bronze bearing	-----	-----	-----	-----	-----
XX	Take-up adjustment, inches					

Rigid Sleeve Bearing Units Selection Guide

To select a rigid sleeve bearing, determine the applied radial load and the applicable operating conditions. The procedure shown here will aid in selecting an appropriate bearing.

The selection procedures and rating formulas used here are in agreement with industry standards for sleeve bearings established by the Mechanical Power Transmission Association. The bearing ratings apply when certain installation and operating conditions are met and when any other adverse ambient conditions such as high or low temperatures, extreme dirt or moisture, chemical contamination, shock or vibration loading direct or induced, oscillating shafts, intermittent operation and related factors are carefully considered.

The ratings used apply when the following conditions are met:

1. Align bearings with the shaft to provide uniform load distribution.
2. Normal running loads should not exceed the ratings shown in the tables. Starting and occasional peak loads should not exceed these ratings by more than 100%.
3. The direction of the load should not be within 30° (.53 radians) of either side of the grease groove and must further meet any load direction limitations imposed by Table 1.
4. The shaft finish through the bearing bore should be at least as smooth as that of normal commercial cold finished steel shafting (about 32 micro-inches or .82 μm). There should also be no machined or ground spiral lead on the shaft journal. Shafting should be within the diameter tolerances listed on the next page.
5. Ambient temperatures should not exceed 130°F (54°C) for babbitt and 300°F (149°C) for bronze bearings. This temperature limit applies to shafts extending from ovens, high temperature fans, etc.
6. Sturdy, vibration-free supporting structures must be provided, along with adequate grease lubrication.

Steps for Selection

Step 1

From Table 1, select the bearing material and housing series and material suitable for the radial load direction.

Step 2

Refer to the radial load rating tables in the Load Ratings and Speed Limits section to determine the shaft diameter necessary to obtain the required radial rating at the given speed.

If the conditions described above cannot be met, the load should be increased by a service factor prior to selecting the bearing sizes from the tables shown in the Load Ratings and Speed Limits section. The service factor may be as high as 2.0 for conditions to the left of the "stair-step" line, or as high as 3.0 for conditions to the right of the line. Consult Rexnord Bearing Division.

Step 3

To position a shaft axially or where light thrust loads are present, provide thick bronze washers backed by a shaft collar or a machined shaft shoulder against the end of the bearing. The bearing ends are already machined.

Table 1 – Bearing material and unit type selection

Material		Recommended Loading Range, Degrees, Radius For Pillow Block Or Flanged Unit*	Available Shaft Sizes, inches	Rigid unit series					
Bearing	Housing			Pillow Block		Flanged Unit			
				2-bolt	4-bolt	Square			
Cast iron	one-piece		300° 5.2 rad	1/2 - 2 15/16	1000				
				3/4 - 3 15/16		F2200			
				3 7/16 - 3 15/16		1000F

					3 7/16 - 4 15/16		2-1300		
					1 15/16 - 8		2-1400		
Cast iron	two-piece		300° 5.2 rad	1 15/16 - 8		2-1400			
						120° 2.1 rad	1 15/16 - 9		2-1500
								Bronze	one-piece
	3/4 - 3 15/16		F2200Z						
	3 7/16 - 3 15/16		1000FZ						
	Cast iron	two-piece		120° 2.1 rad	7/8 - 3 15/16	2-1200Z			
300° 5.2 rad					1 15/16 - 8		2-1400Z		
Cast steel		two-piece		□ 120° 2.1 rad	1 15/16 - 8		2-1500Z		
					300° 5.2 rad	1 15/16 - 12		2K1400Z	

* Shaded portion of drawings represents recommended loading range with the grease groove horizontal and opposite the loaded area. For other positioning, consult Rexnord Bearing Division.

□ 300°(5.2 rad.) for housings with gibbed joint construction.

Additional Information

Sleeve Bearing Materials:

Plain bearings made of babbitt are universally accepted as providing reasonable capacity and dependable service, often under adverse conditions. Babbitt is a relatively soft bearing material and for this reason minimizes danger of scoring or damage to shafts or rotors. It can often be repaired quickly on the spot by rescrapping, pouring of new metal, etc. Bearing operating temperature should not exceed 130°F (54°C) although occasional peaks to 200°F (93°C) may be tolerated. Babbitt bearings are usually restricted to applications involving light to moderate loads and mild shock.

Bronze bearings are suitable for heavier loads than babbitt (75% to 200% higher), depending upon specific conditions of load and speed. Bronze withstands higher shock loads and permits somewhat higher speed operation. It is usually restricted to 300°F (150°C) ambient temperature, although normal multi-purpose greases are limited to 200°-250°F (93°-121°C) operating temperature. Bronze is a harder material than babbitt and has a greater tendency to score or damage shafts in the event of malfunction such as lack of relubrication. Field repair of bronze bearings generally requires removing shims and scraping or replacement of bushings.

Cast iron bearings (series 1100) are low in cost and suitable for many slow moving shafts and oscillating or reciprocating arms supporting relatively light loads. The lubricating characteristics of cast iron are attributed to the free graphite flakes present in the material. With the use of cast iron bearings, higher shaft clearance is usually utilized. Thus any large wear particles or debris will not join or seize the bearing. This material has been used to temperatures as high as 1000°F (538°C) under light loads and slow speed intermittent operations, where ordinary lubricants are ineffective.

Additional Features:

By the very nature of their design, all rigid sleeve bearing units are expansion type, in that the shaft journal is free to slide axially through the bore of the bearing. To fix a unit, a combination of shaft shoulders and/or thrust collars with bronze washers can be utilized. Rigid sleeve bearing units have cored mounting bolt holes suitable for the inch or metric bolts listed.

Bearings can be replaced in units with bronze sleeves. Care should be taken when replacing bronze sleeves, split or solid, to firmly anchor the sleeve to the housing.

Operation:

Rigid sleeve bearing units are not prelubricated. The service instructions packed with shipments provide guide lines for initial lubrication and relubrication intervals. As lack of lubrication results in bearing and shaft wear, care must be taken to assure an adequate supply of correct lubricant, especially during initial start-up and until satisfactory relubrication intervals are determined. Very careful shaft alignment is necessary during installation. Shaft journals must turn freely without binding in the bearing or excessive heat and seizure can result. Any factor which may disrupt or remove the lubricant film should be eliminated as well. Sharp edges on the shaft or the bearing surface can act as scrapers to destroy lubricant films. Do not extend shaft keyways into bearing bores. When rigid sleeve bearings must carry light to medium thrust loads, thrust washers of bronze should be placed against the already machined face of the bearing and backed by substantial thrust collars, shaft shoulders, machined gear, sprocket or sheave faces, etc.

Take-ups:

Rigid sleeve bearing pillow blocks can be mounted on the universal take-up frame LC, and LHD universal take-up frame. Alignment of rigid sleeve bearing take-ups is difficult and must be carefully accomplished. Alignment must also be maintained during any further adjustment of the take-up after operation. Bolt take-up frames firmly to good supporting structure to prevent frame overload and distortion.

Shaft Tolerances:

Shaft diameters for rigid sleeve bearing units are usually held to the following regular commercial tolerances:

Shaft Diameters	Recommended Tolerance
through 2"	Nominal to -.003"
2 1/16" through 4"	Nominal to -.004"
4 1/16" through 6"	Nominal to -.005"
6 1/16" through 13"	Nominal to -.006"

Warning:

The reliability built in all Rexnord bearings can be realized in service only when bearings are correctly selected, properly installed, protected and maintained.

The correct selection of rigid sleeve bearing mounted units requires that the magnitude and nature of all loads, speeds, alignment, mounting, operating requirements and maintenance be adequately considered. The selection of materials for and design of housings, shafting, fasteners, and accessories as well as provisions for installation and maintenance must follow good engineering principles.

Housings must be selected and installed with regard to the degree and direction of the forces that will occur. Housings should not be used under tension loads except with adequate safety factors. For this reason pillow blocks are best suited to withstand radial loads passing through the base. When heavy loads or shock loads are possible, it is most important to mount a unit so that the line of force passes directly into the base, or so that the unit is directly and substantially supported other than through its mounting bolts.

Where the line of force falls outside the base, serious housing and fastener deflection or failure may occur.

Take-ups are best located where loads are moderate and no shock loads are present. As many mounting arrangements are possible with take-ups, proper safety factors must always be considered on all items of the system, including shafts, housings, fasteners, and adjusting screws. Rexnord Bearing Division, should be consulted where unusual loading conditions exist.

Load Ratings – Babbitt Rigid Sleeve Bearing Units

Radial Load Ratings for 10 to 300 RPM (pounds/newtons) * ■

Shaft Diameter, inches	Shaft Speed, RPM

Photo Shows a 2-Bolt Rigid Sleeve Bearing Pillow Block Unit with Bronze Bushing

Product Features

- Corrosion-resistant powder coating
- Cast iron one piece housing
- Babbitt or Bronze sleeve
- 2 or 4-bolt base
- Relubricatable
- See Features and Benefits for additional info on page 532.

Additional Notes

- Please call 1-866-REXNORD for availability
- One pipe tapped hole (two holes for shafts larger than 5 in for lubrication)
- Grease cup or fitting not included
- LHD sliding base take-up can be drilled for these pillow blocks
- For the Selection Guide, Load Ratings and Speed Limits, see the Link-Belt Sleeve Bearing Engineering section on pages 534 - 537.
- Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

21500, 21500Z

Photo Shows a 4-Bolt Rigid Sleeve Bearing Two-Piece Pillow Block Unit with Bronze Bushing

Product Features

- Corrosion-resistant powder coating
- Cast iron housing
- Two-piece angular joint design
- Babbitt or Bronze sleeve
- 4-bolt base
- Relubricatable
- See Features and Benefits for additional info on page 532.

F2200, F2200Z

Photo Shows a 4-Bolt Rigid Sleeve Bearing Flanged Unit with Bronze Bushing

Product Features

- Corrosion-resistant powder coating
- Cast iron one piece housing
- Babbitt or Bronze sleeve
- Relubricatable
- See Features and Benefits for additional info on page 532.

- Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

DSB2800

Photo Shows a Heavy Duty Removable Top Conveyor Take-up Frame with Rigid Sleeve Bearing Take-up Unit

Product Features

- Protected screw type frame
- Corrosion-resistant powder coating
- Cast iron housing
- Babbitt sleeve
- Relubricatable
- See Features and Benefits for additional info on page 532.

Additional Notes

- Please call 1-866-REXNORD for availability
- One pipe tapped hole for lubrication
- Grease cup or fitting not included
- For replacement bearing unit, specify take-up number without amount of adjustment, i.e. DSB2831
- Take-ups with adjustment of 18 in (457.2 mm) or more have center supporting pad welded to bottom of frame
- For radial loads, multiply load rating by a factor of 1.0

For the Selection Guide, Load Ratings and Speed Limits, see the Link-Belt Sleeve Bearing Engineering section on pages 534 - 537.

Note: Dimensions subject to change. Certified dimensions of ordered material furnished on request.

3200 Series Flex-block Sleeve Bearing Units

Flex-block Sleeve Bearings are alignable and self-lubricating. Because the bearing material wears gradually under operation, sudden breakdowns and costly maintenance are minimized. The standard bearing insert materials of oil impregnated porous sintered bronze, or self-lubricating graphite are widely used for the extreme applications of modern industry.

1. One-piece Housing

Sturdy one-piece housings, with machined mounting surfaces, are available as pillow blocks or flanged units.

2. Machined Surface

Component has machined spherical surface for proper seating in housing and for initial mounting alignment.

3. Self-Lubricating or Oil Impregnated

Bearing sleeve, pressed into component, is available in self-lubricating or oil impregnated material.

4. Extend Unit Life

When the component retaining screw is loosened, the insert can be rotated 180° to utilize unused bearing surface and extend the life of the unit.

Bearings Components

Heart of the flex-block bearing is the alignable insert into which is pressed a self-lubricating bearing. The component has a machined spherical surface that is alignable in the housing.

Two types of bearings are available:

1. Sintered bronze sleeve, oil impregnated, for operating temperatures to 200°F (93°C).
2. Self-lubricating carbon-graphite sleeve, for temperatures to 700°F (371°C).

One-piece Cast Iron Housings

Compact one-piece cast iron housings provide strength and superior rigidity. All units are designed with standard mounting dimensions and have finished mounting surfaces for proper installation stability. Pillow blocks have slotted bolt holes with ample space provided for drilling dowel pin holes. Flanged units have drilled mounting holes.

Pillow Blocks 3200P

Alignable pillow blocks have a high-test iron housing, 2-bolt base, and self-lubricating bearing. For shaft sizes 5/8" through 3 15/16".

Flanged Units - 2-bolt 3200FX

Alignable flanged units have 2-bolt cast iron housing and self-lubricating bearing. For shaft sizes 5/8" through 1 3/4".

Flanged Units - 4-bolt 3200F

Alignable flanged units have 4-bolt cast iron housing and self-lubricating bearing. For shaft sizes 5/8" through 3 7/16".

Nomenclature

Symbol	Description	32	16	F	T1	S	C
32	Standard duty series						
16	Shaft diameter in 16ths of an inch						
F	Flanged unit, 4-bolt						
FX	Flanged unit, 2-bolt						
P	Pillow block						
T1	Porous sintered bronze, oil impregnated, 200°F max.						
T3	Self-lubricating carbon graphite, 700°F max.						
T4	Plain bore (cast iron), 1000°F max.						
None	Standard length						
S	Short sleeve, (F, FX units)						
C	Closed end unit						

The nomenclature shown is provided to identify the basic and optional features of bearing and mounted unit assemblies. The most commonly specified variations are listed; however, availability of all variations cannot be assumed. Link-Belt Bearing Division, Rexnord Corporation should be consulted regarding optional features, availability, and the application requirements.

Flex-block Sleeve Bearing Selection Guide

To select a flex-block sleeve bearing, determine the applied radial load and the applicable operating conditions. The procedure shown here will aid in selecting an appropriate bearing.

The bearing ratings apply when certain installation and operating conditions are met and when any other adverse ambient conditions such as high or low temperatures, extreme dirt or moisture, chemical contamination, shock or vibration loading direct or induced, oscillating shafts, intermittent operation and related factors are carefully considered.

The ratings used apply when the following conditions are met:

1. Normal running loads should not exceed the ratings shown in the tables. Starting and occasional peak loads should not exceed these ratings by more than 100%.

2. The shaft finish through the bearing bore should be at least as smooth as commercial steel shafting which varies from 8 to 50 micro-inches ($0.2\ \mu\text{m}$ to $1.3\ \mu\text{m}$). There also should be no machined or ground spiral lead on the shaft journal. For improved bearing performance the shaft finish should not exceed 12 micro-inches ($0.3\ \mu\text{m}$). Shafting should also be within the diameter tolerances.
3. Ambient temperatures should not be lower than 32°F (0°C) for T1 bearing material. The upper operating temperature limits are as follows: T1—200°F (93°C) T3—700°F (371°C)
4. Sturdy, vibration free supporting structures should be provided.
5. Flex-block units should not be exposed to severe dirt conditions.

Steps for Selection

Step 1

Determine the maximum operating temperature of the application.

Step 2

From Table 1, select the bearing insert material.

Step 3

Refer to the radial load rating tables to determine the shaft diameter necessary to obtain the required radial load rating at the given speed. Where short bearings are required, multiply the radial load by the short bearing factor before selecting the bearing.

Step 4

To position a shaft axially or where light thrust loads are present, provide flat washers of the desired material backed by a shaft collar or a machined shaft shoulder against the end of the bearing. The bearing ends are already machined.

Table 1 – Bearing insert material selection

Bearing Insert Suffix	Bearing material	Type of Lubrication	Type of Unit	Available Bore size
T1	Oil impregnated porous sintered bronze	Oil	P	5/8" – 3 15/16"
			FX	5/8" – 1 3/4"
			F	5/8" – 3 7/16"
T3	Machined carbon-graphite	Self-lubricating	P	5/8" – 3 15/16"
			FX	5/8" – 1 3/4"
			F	5/8" – 3 7/16"

Bearing Insert Suffix	Minimum Temperature Limit	Maximum Temperature Limit	Comments
T1	32°F (0°C)	200°F (93°C)	
T3	...	700°F (371°C)	material somewhat brittle—handle with care—no significant shock loads

Additional Information

Flex-block Bearing Materials:

Sleeve bearing inserts made of T1 oil impregnated porous sintered bronze are universally accepted as providing reasonable capacity and dependable service. When lubricant is present damage to shafts or rotors is minimized. Additional SAE 40 oil can be periodically added to extend the bearing life. The T1 bearing operating temperature should not exceed 200°F (93°C). Applications are restricted to those involving light to moderate loads and mild shock. Caution: Do not use stainless steel shaft.

T3 machined carbon graphite bearings are self-lubricating with material worn from the bearing. T3 bearing inserts are limited to a maximum operating temperature of 700°F (371°C). The radial load applied, the shaft surface finish and the speed of operation determine the wear life of the bearing. As machined carbon graphite is somewhat brittle, care should be taken during handling and mounting to avoid chipping the corners, etc.

Additional Features:

By the very nature of their design all flex-block sleeve bearing units are expansion type, in that the shaft journal is free to move axially through the bore of the bearing. To fix a unit, a combination of shaft shoulders and/or thrust collars with flat washers of the desired material can be utilized.

Flex-block pillow blocks have cored mounting bolt holes suitable for the inch or metric bolts listed. Flanged units have drilled mounting holes 1/32" (0.8 mm) larger than the largest inch bolt shown.

Bearings are not replaceable in the components. Replacement components can be ordered but generally the entire unit is replaced when required.

2 and 4-bolt flanged units can be supplied with regular or short bearings.

The short bearing inserts do not project beyond the housing mounting face. When the short bearing is selected, the applied radial load must be multiplied by the short bearing factor before selecting the bearing size.

End closures can be furnished but they require specially machined housings. When end closures are used, shafts should extend no more than 1/8" (3.2 mm) beyond the end of the bearing.

Operation:

Flex-block sleeve bearing units are self-lubricating and ready for operation. Being alignable, they are also easy to mount and careful shaft alignment is not required. However shaft journals must turn freely without binding in the bearing or excessive heat and seizure can result. Any factors which may disrupt or remove the lubricant film should be eliminated. Sharp edges on the shaft or the bearing surface can act as scrapers to destroy lubricant film. Do not extend shaft keyways into bearing bores.

Take-ups:

Flex-block pillow blocks can be mounted on universal take-up frames LC.

Shaft Tolerances:

Shaft diameters for flex-block sleeve bearing units are usually held to the following regular commercial tolerances:

Shaft Diameters Recommended Tolerance

5/8" through 2"	Nominal to $-.003$ "
2 1/2" through 4"	Nominal to $-.004$ "

Caution: Do not use stainless steel shaft, if bearing insert T1 is used.

Commercial shaft finish if free of nicks, burrs, scratches, etc. is generally satisfactory. Improved surface finish of 12 micro-inches ($0.3\ \mu\text{m}$) or less will extend wear life.

Warning

The reliability built in all Rexnord bearings can be realized in service only when bearings are correctly selected, properly installed, protected and maintained.

The correct selection of flex-block sleeve bearing mounted units requires that the magnitude and nature of all loads, speeds, alignment, mounting, operating requirements and maintenance be adequately considered. The selection of materials for and design of shafting, fasteners, seals and accessories as well as provisions for installation and maintenance must follow good engineering principles.

Housings should not be used under tension loads except with adequate safety factors. For this reason pillow blocks are best suited to withstand radial loads passing through the base. When heavy loads or shock loads are possible it is most important to mount a unit so that the line of force passes directly into the mounting surface, or so that the unit is directly and substantially supported other than through its mounting bolts. Where the line of force falls outside the mounting surface, serious housing and fastener deflection or failure may occur. Rexnord Bearing Division should be consulted where unusual loading conditions exist.

Photo Shows a 2-Bolt Flex Block Sleeve Bearing Pillow Block Unit with Bronze Bushing

Product Features

- Corrosion-resistant powder coating
- Cast iron housing
- T1 sintered bronze sleeve
- T3 carbon graphite sleeve
- 2-bolt base
- Alignable
- See Features and Benefits for additional info on page 552.

Vibration Analysis and Defect Frequency Information

Vibration analysis equipment is used to chart the amplitude and frequency of vibration on key areas of a machine. The theory behind predictive maintenance programs is to predict failures in order to reduce downtime costs. This way parts can be ordered and replaced on scheduled downtime without interrupting production.

Note: Vibration analysis is only effective as a trend analysis tool. It must be part of a thoroughly planned program that establishes "norms" for each individual

piece of equipment. Significant variations from these norms may then point to a problem. The problems must then be sized accordingly; does something need to be replaced, does it just need to be greased or adjusted? The "norms" must be well established in order to recognize an abnormal condition.

The following tables show the Vibration Frequency Coefficients.

Rex Roller Bearing Vibration Frequency Coefficients

Size Code	Roller Diameter (in)	Number of Rollers/Row	Pitch Diameter (in)	Contact Angle (deg)	RSF Roller Spin	FTF Fundamental Train	RPM Inner Ring Defect	RPFO Outer Ring Defect	RDF Roller Defect

Shaft Size Tolerance

A snug fit-up between shaft and bearing inner race is required for proper bearing performance. In fact, a press fit is necessary to obtain full basic dynamic capacity. As application conditions and requirements vary, fit-up and mounting requirements change as well.

A slip fit mounting in accordance with the shaft tolerances shown in the tables below will provide generally acceptable service life on normal applications under light to moderate load and speed conditions. A shaft tolerance resulting in looser fits (such as commercial grade shafting) may be expected to have greatly reduced reliability and increasing problems of shaft fret wear, bearing inner ring fracture and shaft slippage. In general, looser fits than recommended are feasible only for very light loading and lower speeds.

Shafting should be designed for adequate strength and stiffness for the intended application. It should be round, straight, free of nicks and burrs and of correct size.

If a special tolerance shaft is to be used, consideration should be given to the use of a precision tolerance bearing, particularly in the case of severe loading or high speed applications to obtain optimum bearing performance.

The tables below list shaft size tolerance information for various types of mounting and application conditions.

Recommended Roller Bearing Shaft Tolerance Table

Shaft Diameter	Recommended Shaft Tolerances
thru 2"	+ .000" to -.003"
2 1/16" to 4"	+ .000" to -.004"
4 1/16" to 6"	+ .000" to -.005"
6 1/16" to 13"	+ .000" to -.006"

Recommended Setscrew Torque Values

Proper tightening torque can be found in the below tables. Achieving these values will distort the set collars and spring load the setscrews to prevent their loosening during operation. If an Allen wrench is used as the torque wrench, place length of pipe over long end and pull until wrench begins to twist.

The axial load capacities listed in the below tables are for knurled cup setscrews having 90° spacing, tightened to recommended torque range on a shaft seat not harder than 35 Rockwell C. The axial load values may be used in design, as a safety factor has been applied.

The setscrew torque values and allowable axial loads are applicable to Rexnord Bearing products only. These values can not be applied to bearings manufactured by other vendors having different setscrew spacing, different type of setscrews and/or different size setscrews.

Introduction to Load Ratings

The values shown in the Radial Load Rating Tables are used to select the most economical bearing capable of sustaining the required speed and load for the desired life. Do not depend entirely on the rated capacity to judge how well the complete mounted unit will perform. Environmental and maintenance conditions can detract from this performance. The realistic approach to mounted bearing application is to consider "theoretical" rated capacity of the base bearing plus the housing design, seals, method of securing to shaft, lubrication, etc., as they effect the desired life expectancy and the economics of overall equipment design.

Basis of Load Ratings

The Anti-Friction Bearing Manufacturer's Association (AFBMA), recommends the use of a standard formula for determining the basic rating of anti-friction bearings. The use of the formula determines the rating for any given bearing and is based upon failure from surface contact fatigue of the roller or race material.

The AFBMA Basic Load Rating definition may be thought of as having two basic principles involved; one being of a physical nature relating to a load carrying ability (Basic Load Rating) and the other taking into consideration failure level or probability of bearing survival (Rating Life).

The definitions of these principles are:

1. The "Basic Load Rating" of a bearing is that consistent stationary equivalent radial load which a group of apparently identical roller bearings with stationary outer ring can endure for one million revolutions of the inner ring.
2. The "Rating Life" of a group of apparently identical bearings is defined as "the number of revolutions that 90% of a group of bearings will complete or exceed before first evidence of fatigue develops." This is often referred to as L_{10} or B-10 Life.

C Rating

The common industry term "C" Rating inter-relates these two rating conditions. The "C" Rating is defined as "the equivalent radial load which may be imposed on the bearings to give an L_{10} (B-10) life of one million revolutions" (500 hours at 33 1/3 rpm). The "C" Rating is calculated from an empirical formula based on size and geometry. The empirical relationship is based on assumptions in several important areas; i.e., press fit mounting to shaft, adequate mineral oil lubrication, no misalignment, uniform loading, moderate speed and temperature, absolute cleanliness, etc. While it would appear logical that all bearings of identical geometry, dimensions and material should produce identical results under identical conditions, in reality, due to variations within specified tolerances of material and manufacturing, failures will occur at random periods of life. Ideally these failures should still result from metal fatigue rather than physical wear of the components. The "C" Rating can be expanded into combinations of load and speed to life hours by utilizing specified load-life relationships. These may then be referred to as the capacity ratings for any speed and life hours with the implied " L_{10} " survival probability consideration. This load rating for a given life condition is often termed Capacity Rating Or Rated Capacity and are shown in the Load Rating Tables in the front of each section.

Co Rating

The Basic Static Capacity (C_o) is that amount of radial or equivalent radial load that can be imposed on a non-rotating bearing without producing excessive brinelling. This rating applies to the performance of the internal parts of the roller bearing. For the vast majority of applications, a bearing can be run normally after sustaining a static load of C_o . First fracture of primary race components does not occur until well above the C_o Rating. C_o does not necessarily represent static strength of the housing or structure in which the bearing is mounted.

Conditions Affecting Rated Life

When the bearings are mounted in commercial housings and offered as a "package" to the user it should then be understood that the values shown in the catalog Load Rating Tables apply only to the base bearing under laboratory conditions. Common application factors which have an adverse effect on rated life are:

- 1 - Improper mounting (alignments, fit up to shaft)
- 2 - Contamination by abrasive or corrosive material
- 3 - Non-uniform load or vibration
- 4 - Inadequate or improper lubrication
- 5 - Excessive temperature or temperature change
- 6 - Excessive speed

The base bearing when mounted in a commercial housing frequently fails from other causes before it reaches the theoretical basis for the rated life. Thus, selection of housing style, seal type, mounting method, specific lubricant, etc., must also be considered to optimize life on the actual application.

Adjusted Rating Life

While actual results or "usable" bearing life is the primary interest of both those who design and those who utilize bearings, a great many factors impact the translation of "theoretical" rated capacity into actual performance. Once the theoretical bearing L_{10} life has been calculated, it can be adjusted for higher reliability, special bearing material properties, and/or operating condition effects on lubrication. Detailed information can be obtained from the Rexnord Engineering Department.

Theoretical Bearing L_{10} Life Calculation

While bearings are usually selected on the basis of capacity, there are occasions when they are selected based on calculated L_{10} life. The L_{10} life is defined as the number of revolutions (or hours) that 90% of a group of bearings will meet or exceed before evidence of raceway spalling fatigue occurs. The L_{10} life can be calculated using the following empirical formula:

Roller Bearing:

$$L_{10} = \frac{1 \times 10^6}{60 \times \text{RPM}} \left(\frac{C}{P_e} \right)^{10/3} = \text{Life in Hours}$$

Ball Bearing:

$$L_{10} = \frac{1 \times 10^6}{60 \times \text{RPM}} \left(\frac{C}{P} \right)^3 = \text{Life in Hours}$$

where C = C Rating

P_e = Equivalent Radial Load or
Required Radial Capacity

The basic dynamic load ratings, C , in this catalog have been increased significantly compared to previous values. Improved surface characteristics have been produced primarily by improving manufacturing and measuring techniques for the race surfaces. Along with the capability to rotate under higher loads, the static load ratings, C_o , have also been increased.

With the larger load ratings it may be possible to use smaller bearings (size code) for a given application. Caution is advised in such cases to consider the strength of the shaft and housing—especially when the applied load is not aimed directly into the machined mounting surface.

Bearing Selection

Optimum bearing performance is the result of selecting the bearing and the shaft to suit the particular application. Bearing size is often controlled by a shaft size selection, based on shaft bending and torsional stresses. In other applications, bearing load capacity is the determining design factor. In either case, the selection procedure outlined below is used to determine the bearing capacity required to meet the application requirements.

Bearing Selection Procedure

This procedure involves conversion of all forces and conditions into one resultant equivalent radial load on each bearing and utilization of the bearing load rating table.

STEP 1.

Determine all forces acting on the bearings. The following types of loading must be considered.

- A. Static loads - weight of shaft assembly and other equipment supported by the bearings. (When these are small in relation to applied loads they are often disregarded).
- B. Applied loads - forces applied on shaft during normal function of equipment and are determined prior to bearing selection.
- C. Drive loads - forces transmitted from power source to the shaft through belts, chains, gears, etc. (see Drive Load).
- D. Eccentric loads - centripetal force due to a designed unbalanced load rotating with shaft (see Eccentric Loads).

STEP 2.

Resolve the radial forces acting on the shaft into radial loads on each bearing. (See Translation of Shaft Forces into Bearing Loads)

STEP 3.

Combine the radial forces vertically to obtain a resultant radial load (P_r) at each bearing (see combining radial loads).

STEP 4.

Add or subtract all thrust forces (if any) to determine the total thrust load (P_t) acting on the shaft. Assume this thrust load is acting at the bearing with the greatest radial load (P_r).

STEP 5.

Calculate the equivalent radial load (P_e) using the applicable thrust formula. If no thrust is present, then $P_e = P_r$. (See selection guides)

STEP 6.

Apply the modification factors (M) and obtain a required radial capacity (P) to reflect actual application conditions. (See Load Modification Factors)

$$P = P_e \times M$$

STEP 7.

Select a bearing size from the load rating table at the front of each section. Use the largest calculated Required Radial Capacity value (P) and the application speed and life requirements in making the optimum selection. Usually, a single set collar bearing provides an adequate, economic selection. However, in applications involving shock and vibration, increased rigidity, or when shaft locking or housing strength is desired, a double set or adapter mount unit should be specified.

NOTE: If bearing selection has been made without consideration of shaft strength, shaft size (as indicated by bearing bore) should be checked.

Applied Loads

Each shaft performs a basic work function in a system, regardless of the type or style of equipment. The forces relating to this work function normally represent the primary load on the shaft and are most accurately determined by those responsible for total equipment design. When this load information is supplied, these loads are combined with other loadings to determine a bearing selection.

Radial Loads

Drive Loads

To determine the radial force on a shaft from a belt or chain drive where the horsepower being transmitted is known, the following formula should be used:

$$F = \frac{HP \times 126,000 \times K}{PD \times RPM} \quad \text{Formula (1)}$$

Where:

- F - Radial Force on Shaft
- HP - Horsepower transmitted
- PD - Pulley diameter or pitch diameter of sprocket or sheave in inches
- RPM - Revolutions per minute
- K - See Drive Tension Factors (below)
- 126,000 - A constant for conversion of horsepower, speed and pulley diameter to radial pounds of force

Drive Tension Factors - K:

While subject to considerable variations due to different installation and maintenance practice, the following Drive Tension Factors "K" are recommended for normal applications:

"K" Factors

Type of Drive	Normal Tension	4 or more V-belts, Tight Belts, Short Centers, High Ratios
Chain	1	1
V-belts (1 to 3 belts)	1.5	2
Flat Belts	2	3

Eccentric Loads

An unbalanced shaft generates a centripetal force which acts radially on the shaft per the following formula:

$$C.F. = .000028 \times r \times W \times (RPM)^2 \quad \text{Formula (2)}$$

- C.F. = Centripetal Force (Lbs.)
- r = Radius of rotation of unbalanced load in inches
- W = Weight of unbalanced load in lbs.
- RPM = Revolutions per minute

Since the centripetal force varies in direction it should be added to the maximum combined load from other sources. A modification factor (see Load Modification Factors) must also be included on this type loading.

Bearing Selection

Translation of Shaft Forces into Bearing Loads

Any radial force (F) can be resolved into individual loads on each bearing. The amount of load supported by each bearing is determined from the summation of moments using the following formulas:

When the load (F) is between supports, it produces bearing loads (Fa, Fb) in same direction on both bearings (A & B), and equal to the applied load. ($F = F_a + F_b$).

An overhung load produces a bearing load (Fa) in the opposite direction of the far bearing (A); and since a lever arm is involved, the magnitude of load (Fb) on nearest bearing (B) will be greater than the overhung load (F), by the amount of load (Fa) on far bearing (A). ($F = F_b - F_a$).

$$F_a = \frac{F \times e}{c}$$

Formula (3)

$$F_b = \frac{F \times d}{c}$$

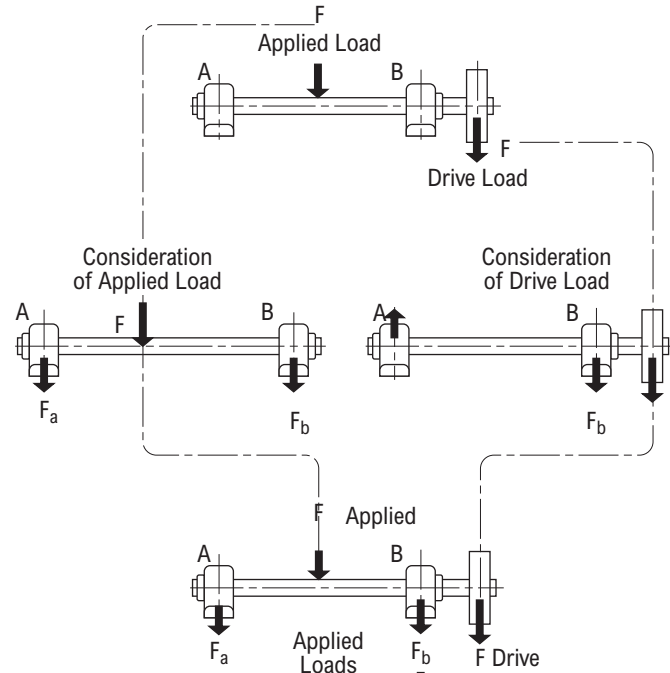

Formula (4)

Note Direction of Forces Fa, Fb

- F - Force on shaft required to transmit power and or other radial forces acting on shaft from one point
- Fa - Radial force on bearing "A"
- Fb - Radial force on bearing "B"
- c - Distance between bearing centerlines in inches
- d - Distance between centerline of bearing "A" and force "F" in inches
- e - Distance between centerline of bearing "B" and force "F" in inches

Combining Radial Loads

Typical applications involve both an applied load and a drive load. Normal Engineering Procedure would be to treat each load source separately, but to ultimately combine these loads as shown below:

In applications where all loads are in the same plane, the forces can be added or subtracted. However, in most applications, all radial forces are not in the same direction. Where two or more radial forces are not in the same plane, these forces should be changed to vertical and horizontal components as shown by the following formula:

$$F_v = \text{Force } F \text{ Sine } \angle \quad \text{Formula (5)}$$

$$F_h = \text{Force } F \text{ Cos } \angle \quad \text{Formula (6)}$$

Where:

Fv = Vertical component in lbs.

Fh = Horizontal component in lbs.

Sine \angle = Sine of angle between force "F" and horizontal

Cos \angle = Cos of angle between force "F" and horizontal

These horizontal and vertical components are combined to obtain a net horizontal force (Prh) and a net vertical force (Prv). The resultant radial force on a bearing is determined as follows:

$$P_r = \sqrt{P_{rv}^2 + P_{rh}^2} \quad \text{Formula (7)}$$

Where:

Pr = Resultant radial load

Prv = Total vertical radial load

Prh = Total horizontal radial load

Resultant radial loads (Pr) can also be determined graphically, using vectors representing both size and direction of imposed loads.

Bearing Selection

Pure Thrust Loads

Centrifugal pumps, propellers, drilling equipment, vertical shafts and screw conveyors represent types of equipment where one of the bearings supporting the shaft may be required to take primarily thrust loads. Rex units are capable of taking thrust loads in either direction.

Thrust load ratings for units may be obtained as follows:

$$\text{Thrust Rating} = \frac{\text{Catalog Radial Load Rating}}{\text{Maximum Thrust Factor}}$$

The "Thrust Rating" is the maximum thrust load a bearing can withstand at the selected RPM and L₁₀ Life.

NOTE: Assume thrust load is supported by one bearing only. High thrust loads require special shaft and mounting considerations. Installation must also be considered to assure maximum performance.

Combined Radial and Thrust Loads

In many applications such as, helical, bevel or spiral-bevel gears the bearings are required to carry combined radial and thrust loads. Rex Bearings are in effect two single-row angular contact bearings having a common inner race with a spherical surface. They are, therefore, capable of carrying both radial and thrust loads in either direction.

For purposes of selection, it is always advisable to assume that, if any thrust loading is present, it is carried by the bearing with the heaviest radial load. (In most applications it is almost impossible to split a thrust load between two or more bearings. Also, unless floating units are used, it is difficult to mount bearings so that only one specific bearing carries all the thrust load imposed on a shaft.)

When both thrust and radial loads are involved, the formulas in the Thrust Table are used. The formula combine both loads into an equivalent radial load for which a bearing may be selected from the Load Rating Table. The correct formula is selected based upon size of the unit and percentage of thrust to radial load involved.

Equivalent Radial Load

When selecting a bearing for an application involving thrust loading, a shaft size range must be determined or estimated and bearing series decided to obtain a formula from the Thrust Table below. When a specific bearing has been selected from the Radial Load Rating Table as a result of the use of this formula from the Thrust Table, and its shaft size or style is outside the range of the original formula, the selection is not valid and the equivalent radial load (P_e) must be recalculated using the new formula related to that shaft size and bearing series.

Load Modification Factors

Normal calculations of bearing loads do not take into consideration special load conditions such as oscillatory, shock, or variable loads. To take such conditions into account, load modification factors are applied to the calculated load. These factors, whether termed load modification factors, application factors, or service factors, are all intended to allow extra bearing capacity to offset inordinate loading conditions.

Since factor selection is always a matter of judgement, even personnel experienced in bearing selection and application vary in their assessment of factors for individual application conditions.

The factors listed below are intended only as a general guide and may be adjusted for particular situations.

Oscillatory Loads

Some bearing applications involve shaft oscillation instead of complete rotation. The table below lists the M factors corresponding to the maximum included angle of oscillation. The applied load is multiplied by this M factor to determine the equivalent radial load. When using the load rating tables, the vertical column headings represent cycles per minute instead of RPM.

Basic failure mode changes at oscillation angles below 30° - consult Rexnord.

Oscillation Factors

φ	30	60	90	120	150	180
M	.58	.72	.81	.89	.95	1.00

φ = Included oscillation angle - degrees

M = Modifying factor.

Shock Loads

Shock is an actual dynamic load on the bearing. Consequently capacity must be allocated to handle shock loading in addition to the basic dynamic loading normally calculated or analyzed in an application.

Shock Factors

Operating Condition	Frequency Overload		
	Occasional 33%	Frequent 67%	Continuous 100%
No Shock	1.00	1.00	1.00
Light Shock	1.14	1.24	1.33
Moderate Shock	1.32	1.52	1.67
Heavy Shock or Extreme Vibration	1.52	1.80	2.00

Resultant Load

The Resultant Radial Load P_r or Equivalent Radial Load P_e multiplied by selected Modifying Factors will give the Required Radial Capacity P in terms of catalog load rating tables.

For Radial Load Only:

$$P = P_r \times M \quad \text{Formula (9)}$$

For combined Radial and Thrust Loads as well as Thrust Loads:

$$P = P_e \times M \quad \text{Formula (10)}$$

If safety factors or other allowances have been included in the initial bearing loads to reflect application conditions, then do not duplicate those factors from the following table to avoid exaggerating bearing loads. In case two or more factors are involved, the values should be multiplied together to obtain the combined "M" Factor.

Variable Loads

In many cases, a bearing is subjected to varying loads and speeds.

The following formula calculates the equivalent load on the bearing when this occurs.

$$P_e = \sqrt[3.33]{\frac{P_1^{3.33}n_1t_1 + P_2^{3.33}n_2t_2 + \dots P_n^{3.33}n_nt_n}{N}} \quad \text{Formula (11)}$$

where P_1, P_2, P_n are the loads (in lbf) acting at speeds n_1, n_2, n_n (in rpm)

t_1, t_2, t_n are the durations (in decimal percentage) of each load and speed

$$N = t_1n_1 + t_2n_2 + \dots t_n n_n$$

For cases where the load is variable but the speed is constant, the following simplified formula is used:

$$P_e = \sqrt[3.33]{P_1^{3.33}t_1 + P_2^{3.33}t_2 + \dots P_n^{3.33}t_n} \quad \text{Formula (12)}$$

When the load varies from a minimum to a maximum load and is a continuous and gradual change, the equivalent load is calculated using the following formula:

$$P_e = \frac{P_{min} + 2P_{max}}{3} \quad \text{Formula (13)}$$

For calculations of more complex loading conditions, consult the Rexnord Bearing Engineering Department.

Application Example

Determine the Flange Block Requirements for the Mixing Tub as shown:

Operating Data	Symbol	Value
Wt. of mixing tub and load	W	2400 lbs.
Horsepower	HP	10
Speed	RPM	200
"K" Factor	K	2
Sheave Pitch Dia.	PD	14"
Bearing "A" to "B"	c	24"
Bearing "A" to Sheave	d	32"
Bearing "B" to Sheave	e	8"
L-10 Life required	-	15,000 Hrs.

Radial force on shaft from V-Belt drive (F) is calculated by using formula (1),

$$F = \frac{HP \times 126,000 \times K}{PD \times RPM} = \frac{10 \times 126,000 \times 2}{14 \times 200} = 900 \text{ lbs.}$$

F1 load from drive, will produce radial loads on bearings "A" and "B." These radial loads are determined by using formulae (3) and (4)

Bearing "A"

$$F_a = \frac{F \times e}{c} = \frac{900 \times 8}{24} = 300 \text{ lbs.}$$

$$F_b = \frac{F \times d}{c} = \frac{900 \times 32}{24} = 1200 \text{ lbs.}$$

A bearing selection is made based upon bearing "B" because it carries the greater radial load. The total thrust load, 2400 lbs. from the weight of the mixing tub and load, should also be considered as acting on that bearing.

The thrust and radial loads are combined to an equivalent radial load by selecting the proper X, Y Factors in the Bearing Selection Guide.

In this case use:

$$P_e = .67 P_r + 2.60 P_t = .67 (1200) + 2.60 (2400) \\ = 804 + 6240 = 7044$$

Referring to the Rexnord Roller Bearing Radial Load Rating Table, a size code 9 bearing has a rating of 9855 lbs. at 200 rpm and 15,000 hours life. Using the derating factor at the bottom of the table, a Normal Duty 2211 bearing has a rating of $(1-.15) \times 9855 = 8377$ lbs. This exceeds the 7044 lbs. of equivalent radial load that was calculated so the 2211 is satisfactory. Therefore, a ZB2211 Normal Duty Flange Block would be selected. Using the formula and C, the bearings L₁₀ life would be:

$$L_{10} = \frac{1 \times 10^6}{60 \times 200} \left[\frac{46,800 \times .85}{7044} \right]^{10/3} = 26,728 \text{ hours}$$

Application Example - Chain and Belt Drives

Radial load on bearings consist of two parts: from the dead load and from the drive. Because these loads act in different directions, they will have to be combined by using formula 5, 6 and 7.

Bearing "A"

Load from weight in center of shaft:

$$F_{2a} = \frac{1000}{2} = 500 \text{ lbs. because weight is centered between both bearings. Load is downward.}$$

Load from drive:

$$F_{1a} = \frac{F_1 \times e}{c} = \frac{1200 \times 10}{90} = 133 \text{ lbs. at } 45^\circ \text{ downward}$$

To combine the loads, the 133 lb. load must be broken up into vertical and horizontal loads.

$$F_v = F_{1a} \times \sin 45^\circ = 133 \times .707 = 94 \text{ lb. vertical downward}$$

$$F_h = F_{1a} \times \cos 45^\circ = 133 \times .707 = 94 \text{ lb. horizontal}$$

Now combine the total downward load and horizontal load.

$$P_r = \sqrt{(94)^2 + (594)^2} = 602 \text{ lbs. radial load on "A"}$$

Combined Radial Loads

Determine the pillow block requirements for the application shown below:

Operating Data	Symbol	Value
Load from drive	F1	1200 lbs.
Dead load on shaft	F2	1000 lbs.
Speed	RPM	1000
L ₁₀ Life required	-	15,000 Hrs.
Bearing "A" to "B"	c	90"
Bearing "A" to sprocket	d	100"
Bearing "B" to sprocket	e	10"
Sin 45°		.707
Cos 45°		.707

Bearing "B"

Load from weight in center of shaft:

$$F_{2b} = \frac{1000}{2} = 500 \text{ lbs. downward}$$

Load from drive:

$$F_{1b} = \frac{F_1 \times d}{c} = \frac{1200 \times 100}{90} = 1333 \text{ lbs. at } 45^\circ \text{ upward}$$

Now break up the 1333 lb. load into horizontal and vertical loads:

$$F_v = F_{1b} \times \sin 45^\circ = 1333 \times .707 = 944 \text{ lbs. vertical upward}$$

$$F_h = F_{1b} \times \cos 45^\circ = 1333 \times .707 = 944 \text{ lbs. horizontal}$$

Now combining the total upward load and horizontal load

$$P_r = \sqrt{(444)^2 + (944)^2} = 1042 \text{ lbs. radial load on "B"}$$

Bearing selection will be based on Bearing "B" because it has the highest load of the two bearings. Referring to the Rexnord Roller Bearing Radial Load Rating Table, a size code 3 bearing has a rating of 1858 lbs. at 1000 rpm and 15,000 hours life. Using the derating factor at the bottom of the table, a Normal Duty 2102 bearing has a rating of (1-.15) X 1858 = 1579 lbs. This exceeds the 1042 lbs. of equivalent radial load that was calculated for Bearing "B" so the 2102 is satisfactory. Therefore, a ZA2102 Normal Duty Pillow Block would be selected.

Using the formula and the C Rating, the bearings L₁₀ life would be:

$$L_{10} = \frac{1 \times 10^6}{60 \times 1000} \left[\frac{14,300 \times .85}{1042} \right]^{10/3} = 59,949 \text{ hours}$$

Application Example - Chain and Belt Drives

Determine the pillow block requirements for the jack shaft driven by a chain sprocket and power take-off through a 4-V Belt Sheave as shown:

Operating Data	Symbol	Value
Horsepower	HP	30
Speed	RPM	200
L ₁₀ Life required	-	80,000 Hrs.
"K" Factor	K _{v-belt}	2
"K" Factor	K _{chain}	1
Sprocket Pitch Dia	PD _{chain}	10"
Sheave Pitch Dia	PD _{v-belt}	15"
Bearing "A" to "B"	C	20"
Bearing "A" to sheave	d _{v-belt}	10"
Bearing "A" to sprocket	d _{chain}	30"
Bearing "B" to sheave	e _{v-belt}	10"
Bearing "B" to sprocket	e _{chain}	10"

Radial force on shaft from chain drive (F_{chain}) is calculated by using Formula (1).

$$F_{chain} = \frac{HP \times 126,000 \times K}{PD \times RPM} = \frac{30 \times 126,000 \times 1}{10 \times 200} = 1890 \text{ lbs.}$$

(NOTE: Chain pull in this case is downward)

Radial force on shaft from V-Belt power take-off (F_{v-belt}) is calculated by using Formula (1).

$$F_{v-belt} = \frac{HP \times 126,000 \times K}{PD \times RPM} = \frac{30 \times 126,000 \times 2}{15 \times 200} = 2520 \text{ lbs.}$$

(NOTE: V-belt pull in this case is upward)

Radial load on bearings is now determined by combining resulting loads from both chain pull and V-Belt pull using Formula (3) and (4).

Bearing "A"

Load from chain pull

$$F_a = \frac{F_{chain} \times e_{chain}}{C} = \frac{1890 \times 10}{20} = 945 \text{ lbs.}$$

(NOTE: F_a from chain pull is upward)

Load from V-Belt pull

$$F_a = \frac{F_{v-belt} \times e_{v-belt}}{C} = \frac{2520 \times 10}{20} = 1260 \text{ lbs.}$$

(NOTE: F_a from V-Belt is upward)

Combining both F_a s and because both loads are upward add both loads to get total:

$$\text{Total load on "A"} = 945 \text{ lbs.} + 1260 \text{ lbs.} = 2205 \text{ lbs.}$$

Bearing "B"

Load from chain pull

$$F_b = \frac{F_{chain} \times d_{chain}}{C} = \frac{1890 \times 30}{20} = 2835 \text{ lbs.}$$

(NOTE: F_b from chain pull is downward)

Load from V-Belt pull

$$F_b = \frac{F_{v-belt} \times d_{v-belt}}{C} = \frac{2520 \times 10}{20} = 1260 \text{ lbs.}$$

(NOTE: F_b from V-Belt is upward)

Combining both F_b s and because one load is upward and one is downward, subtract to get total:

$$\text{Total load on "B"} = 2835 \text{ lbs.} - 1260 \text{ lbs.} = 1575 \text{ lbs.}$$

Bearing selection will be based on Bearing "A" because it has the highest load of the two bearings. Referring to the Rexnord Roller Bearing Radial Load Rating Table, a size code 7 bearing has a rating of 3466 lbs. at 200 rpm and 80,000 hours life. Using the derating factor at the bottom of the table, a Normal Duty 2203 bearing has a rating of (1-.15) X 3466 = 2946 lbs. This exceeds the 2205 lbs. of equivalent radial load that was calculated for Bearing "A" so the 2203 is satisfactory. Therefore, a ZA2203 Normal Duty Pillow Block would be selected.

Using the formula and the C Rating, the bearings L₁₀ life would be:

$$L_{10} = \frac{1 \times 10^6}{60 \times 200} \left[\frac{27,200 \times .85}{2205} \right]^{10/3} = 210,092 \text{ hours}$$

414-643-2366 (Outside the US)
www.rexnord.com

Why Choose Rexnord?

When it comes to providing highly engineered products that improve productivity and efficiency for industrial applications worldwide, Rexnord is the most reliable in the industry. Commitment to customer satisfaction and superior value extend across every business function.

Delivering Lowest Total Cost of Ownership

The highest quality products are designed to help prevent equipment downtime and increase productivity and dependable operation.

Valuable Expertise

An extensive product offering is accompanied by global sales specialists, customer service and maintenance support teams, available anytime.

Solutions to Enhance Ease of Doing Business

Commitment to operational excellence ensures the right products at the right place at the right time.

REXNORD

Rexnord Company Overview

Rexnord is a growth-oriented, multi-platform industrial company with leading market shares and highly trusted brands that serve a diverse array of global end markets.

Process & Motion Control

The Rexnord Process & Motion Control platform designs, manufactures, markets and services specified, highly engineered mechanical components used within complex systems where our customers' reliability requirements and the cost of failure or downtime are extremely high.

Water Management

The Rexnord Water Management platform designs, procures, manufactures and markets products that provide and enhance water quality, safety, flow control and conservation.
